PROVEN STRATEGIES FOR APPLYING PROGRAM MANAGEMENT TECHNIQUES TO PUBLIC SECTOR PERFORMANCE MANAGEMENT Government Program Management examines ongoing global reforms in public-sector program design and management and explains how to deliver public-sector programs in response to these reforms. A new, generic program management model--essential for government executives, program managers, and legislative leaders--is presented. The new model addresses various dysfunctional forces, many of them global in scale, that inhibit public programs from achieving their intended benefits and outcomes. This in-depth resource discusses broad reforms that fundamentally alter government agency structure, performance reporting and budgeting, composition, and roles and functions. The book also looks at targeted reforms affecting individual programs, covering concept, planning, design, delivery, cost control, and performance reporting. Best practices from both the public and private sectors are covered in this pioneering guide. Government Program Management covers: Forces for change in government program management: impacts of the new public management theory Problems and issues in public program performance and benefits management Agency performance and program management developments in the United States Applying the industry standard for program management according to the Project Management Institute to public agencies and programs The program management office in the public sector Government workforce changes and implications for program management Public program leadership developments Global models and benchmarks for program management: new public management concepts Models for future programs Case study: a national digital health information system in the United States The special problem of networked and intergovernmental programs Recommendations for changing public program management structure, systems, and processes in the United States beginning with the president

Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world--complete with its own jargon and status system-in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In Gifted Tongues, Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.

In a networked and globalized world of information the form of national bibliographies may have changed, however their major function remains unchanged: to inform about a country's publication landscape, its cultural and intellectual heritage. Subject access offers a major route into this landscape providing information about the dispersion of publications in specific fields of knowledge and topics contained in a particular national publishing output. The Guidelines for Subject Access in National Bibliographies give graded recommendations concerning subject indexing policies for national bibliographic agencies and illustrating various policies by providing best practice examples.

This book helps advance process safety in a key area of interest. Currently, no literature exists which is solely dedicated to process safety for the bioprocessing industry. There are texts, guidelines, and standards on biosafety at the laboratory level and for industrial hygiene, but no guidelines for large-scale production facilities. In fact, biosafety is largely defined as a field that promotes safe laboratory practices, procedures and use of containment equipment and facilities. Additionally, biomedical engineers, biologists, or other professionals without chemical engineering training or knowledge of inherently safe design are designing many of these facilities.

This monograph was assembled to honor Professor Norman Bowery and his work on the 30th anniversary of his discovery of the GABAB receptor. In the present volume, leading neuroscientists from academia and industry provide a perspective of current research, both basic and translational, in the discovery of drugs acting at the GABAB receptor. The topics covered provide a comprehensive review of the field and the current state of research in this area. Included are chapters on the chemistry of GABAB agonists and antagonists, on the genetics and molecular composition of the site, its regulation and trafficking, and its role in controlling cellular, autonomic, and behavioral function. There are also chapters describing the potential clinical utility of drugs regulating GABAB activity receptor in the areas of hypertension, gastroesophageal reflux disease, Down syndrome, depression, and substance abuse. The information contained in this text will be of particular interest to neuroscientists in general and to neuropharmacologists in particular. The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge information. The book provides insights for advance research work in the area of image processing and biometrics.
