The New York Times, USA Today, Publishers Weekly, and Wall Street Journal Bestseller For those who witnessed the global collapse of socialism, its resurrection in the twenty-first century comes as a surprise, even a shock. How can socialism work now when it has never worked before? In this pathbreaking book, bestselling author Dinesh D ’ Souza argues that the socialism advanced today by the likes of Alexandria Ocasio-Cortez, Bernie Sanders, Ilhan Omar and Elizabeth Warren is very different from the socialism of Lenin, Mao and Castro. It is “ identity socialism, ” a marriage between classic socialism and identity politics. Today ’ s socialists claim to model themselves not on Mao ’ s Great Leap Forward or even Venezuelan socialism but rather on the “ socialism that works ” in Scandinavian countries like Norway and Sweden. This is the new face of socialism that D ’ Souza confronts and decisively refutes with his trademark incisiveness, wit and originality. He shows how socialism abandoned the working class and found new recruits by drawing on the resentments of race, gender and sexual orientation. He reveals how it uses the Venezuelan, not the Scandinavian, formula. D ’ Souza chillingly documents the full range of lawless, gangster, and authoritarian tendencies that they have adopted. United States of Socialism is an informative,

provocative and thrilling expos é not merely of the ideas but also the tactics of the socialist Left. In making the moral case for entrepreneurs and the free market, the author portrays President Trump as the exemplar of capitalism and also the most effective political leader of the battle against socialism. He shows how we can help Trump defeat the socialist menace.

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key FeaturesA go-to guide to help you master AI algorithms and concepts8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillanceUse TensorFlow, Keras, and other Python libraries to implement smart AI applicationsBook Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for

not tackling any kind of AI problems without any hassle. What you will learnBuild an intelligent machine translation system using seq-2-seq neural translation machinesCreate AI applications using GAN and deploy smart mobile apps using TensorFlowTranslate videos into text using CNN and RNNImplement smart AI Chatbots, and integrate and extend them in several domainsCreate smart reinforcement, learning-based applications using Q-LearningBreak and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

This contribution book is a collection of reviews and original articles from eminent experts working in the multi- and

interdisciplinary arena of biomaterials, ranging from their design to novel uses. From their personal experience, the readers can obtain a stimulating foresight on the potentialities of different synthetic and engineered biomaterials. 21 chapters have been organized to illustrate different aspects of biomaterials science. From advanced means for the characterization and toxicological assessment of new materials, through "classical" applications in nanotechnology and tissue engineering, toward novel specific uses of these products, the volume wishes to give readers a view of the wide range of disciplines and methodologies that have been exploited to develop biomaterials with the physical and biological features needed for specific clinical and medical applications.

This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. Table of Contents Introduction Section One: Windows Configuration Chapter 1: AlwaysInstallElevated Section Two: Domain Controller Chapter 2: Zerologon Section Three: Windows Service Chapter 3: Service - Insecure File Permission Chapter 4: Service - Unquoted Path Chapter 5: Service - Bin Path Chapter 6: Service - Registry Chapter 7: Service - DLL Hijacking Section Four:

Can I Taste It? Simplified Manual for Kids and Adult

Already a classic of war reporting and now reissued as a Grove Press paperback, *Black Hawk Down* is Mark Bowden's brilliant account of the longest sustained firefight involving American troops since the Vietnam War. On October 3, 1993, about a hundred elite U.S. soldiers were dropped by helicopter into the teeming market in the heart of Mogadishu, Somalia. Their mission was to abduct two top lieutenants of a Somali warlord and return to base. It was supposed to take an hour. Instead, they found themselves pinned down through a long and terrible night fighting against thousands of heavily armed Somalis. The following morning, eighteen Americans were dead and more than seventy had been badly wounded. Drawing on interviews from both sides, army records, audiotapes, and videos (some of the material is still classified), Bowden's minute-by-minute narrative is one of the most exciting accounts of modern combat ever written—a riveting story that captures the heroism, courage, and brutality of battle.

What is a beautiful watch? How do you make a good choice? "The Magic of Watches" explains how and why these little objects are so precious, fascinating and exciting. The Magic of Watches loves paradoxes: why a one-million-dollar watch might be less precise and more fragile than one that costs 15 dollars. The Magic of Watches comes back to the origins of the measurement of time: how did we go from the water clock to the wristwatch? The Magic of Watches dares to speak about technique: how does a mechanical movement work? How does a quartz watch work? The Magic of Watches delves into details: what is a "complication" and when do we speak about

"chronometer"? The Magic of Watches likes art: how do we enamel a dial? The Magic of Watches is unique: it focuses in detail on the basics in order to understand and love watches better.

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.
