One of the most crucial changes in North American life, Lyle E. Schaller explains, has been the shift from small to large institutions. Sixty years ago one-teacher, one-room schoolhouses still abounded, and the average number of students in all American schools was one hundred. Now new construction on elementary schools is often for facilities that will accommodate more than twelve hundred students, and average school size is over six hundred. Similar changes have happened in several other branches of American life. These changes, Schaller contends, mean that the rules have changed for everyone involved in organizational life. Very large churches—megachurches—will increasingly come to embody the new rule-book for congregations. Extending their mission far beyond a single local neighborhood, they will draw large numbers of visitors, helping them move progressively from skeptics or seekers to believers to learners to disciples to apostles. The Very Large Church was written for those congregational leaders, both volunteer and paid staff, who recognize that their old rule-book is obsolete and who are eager to learn how to participate effectively in the very large church in a context that is defined by the culture, the societal context, clearly defined expectations, a theological belief system, a passion for evangelism, a high level of competence, creativity, innovation, and a new and different set of rules, rather than by local traditions, geographical boundaries, or yesterday's stereotypes. Key Features: • Focuses on issues in organization life—Schaller's strong suit • Addresses a tendency that is growing today Key Benefits: • Places the shift to large churches within the context of a cultural shift from small to large institutions • Demonstrates how and why the old rule-book for organizational structure must change • Helps church leaders understand how to make the transition to the megachurch culture while retaining Christian integrity

This book provides authoritative information, techniques and data necessary for the appropriate understanding of biomass and biowaste (understood as contaminated biomass) composition and behaviour while processed in various conditions and technologies. Numerous techniques for characterizing biomass, biowaste and by-product streams exist in literature. However, there lacks a reference book where these techniques are gathered in a single book, although such information is in increasingly high demand. This handbook provides a wealth of characterization methods, protocols, standards, databases and references relevant to various biomass, biowaste materials and by-products. It specifically addresses sampling and preconditioning methods, extraction techniques of elements and molecules, as well as biochemical, mechanical and thermal characterization methods. Furthermore, advanced and innovative methods under development are highlighted. The characterization will allow the analysis, identification and quantification of molecules and species including biomass feedstocks and related conversion products. The characterization will also provide insight into

physical, mechanical and thermal properties of biomass and biowaste as well as the resulting by-products.

The Cairngorms area is arguably the most significant for nature conservation in the British Isles and contains its largest National Park. In this book, 35 authors, drawing on published and unpublished sources, present an up-to-date review of the area's natural features, including plants, animals, habitats, geology and landforms. The review falls into three parts. The first and largest part describes the area's rich diversity of nature, with each chapter summarising recent research findings, trends and conservation issues for a different landform, habitat or species group. The second part considers deer management, recreation and projected climate change impacts. Part three focuses on rare and threatened species, and identifies areas and habitats rich in species for which the Cairngorms are nationally and internationally important.

Bulova: A History of Firsts chronicles the extraordinary American watch company in a fittingly unusual manner: by recounting an epic, multi-generational picaresque that runs from the Gilded Age up through present-day New York City. Joseph Bulova, the man behind the movement by which America would set its time, was an iconoclastic industrialist who introduced standardized mass production to fine mechanical watchmaking, fostering in turn a corporate culture of innovation that endures today. Less a traditional corporate history than an exactingly curated periodical, this profound new title features eight visually captivating chapters comprising an essay each by luminaries including style journalists David Coggins and Matthew Hranek, music-industry legend Nile Rodgers, advertising writer Stuart Elliott, noted horology authority Jack Forster and more, all edited by luxury historian Aaron Sigmond.

In order to equip hopeful graduate students with the knowledge necessary to pass the qualifying examination, the authors have assembled and solved standard and original problems from major American universities - Boston University, University of Chicago, University of Colorado at Boulder, Columbia, University of Maryland, University of Michigan, Michigan State, Michigan Tech, MIT, Princeton, Rutgers, Stanford, Stony Brook, University of Wisconsin at Madison - and Moscow Institute of Physics and Technology. A wide range of material is covered and comparisons are made

between similar problems of different schools to provide the student with enough information to feel comfortable and confident at the exam. Guide to Physics Problems is published in two volumes: this book, Part 1, covers Mechanics, Relativity and Electrodynamics; Part 2 covers Thermodynamics, Statistical Mechanics and Quantum Mechanics. Praise for A Guide to Physics Problems: Part 1: Mechanics, Relativity, and Electrodynamics: "Sidney Cahn and Boris Nadgorny have energetically collected and presented solutions to about 140 problems from the exams at many universities in the United States and one university in Russia, the Moscow Institute of Physics and Technology. Some of the problems are quite easy, others are quite tough; some are routine, others ingenious." (From the Foreword by C. N. Yang, Nobelist in Physics, 1957) "Generations of graduate students will be grateful for its existence as they prepare for this major hurdle in their careers." (R. Shankar, Yale University) "The publication of the volume should be of great help to future candidates who must pass this type of exam." (J. Robert Schrieffer, Nobelist in Physics, 1972) "I was positively impressed ... The book will be useful to students who are studying for their examinations and to faculty who are searching for appropriate problems." (M. L. Cohen, University of California at Berkeley) "If a student understands how to solve these problems, they have gone a long way toward mastering the subject matter." (Martin Olsson, University of Wisconsin at Madison) "This book will become a necessary study guide for graduate students while they prepare for their Ph.D. examination. It will become equally useful for the faculty who write the questions." (G. D. Mahan, University of Tennessee at Knoxville)

This book presents quality technical papers representing the recent developments in the field of hydrological modeling, water management and water governance including practical applications. The content covers multifarious aspects of hydrology and water resources. It includes an application of the Hydrologic Modelling System (HEC-HMS) which has been successfully demonstrated for assessment of floods. The authors suggest an approach for the mitigation of cyclone disaster through a case study of the Phailin cyclone, whilst considering mitigating pluvial flooding, developing suitable management strategies. The book includes chapters discussing the detrended fluctuation analysis which is carried out for multifractal description of droughts. Drought characteristics are analyzed, and drought indices evolved for drought preparedness/management. The use of science in community planning under changing climate is also studied and discussed. The authors present and experimental study wherein hydraulic coefficients are calibrated by using vertical orifice. A cross flow hybrid hydrokinetic turbine is also evaluated

for performance, and high head regulating radial gate designed and studied its sensitivity. This book will appeal to researchers, field practitioners, NGO and other Governmental as well as private water practitioners

Vintage Views Along the West Michigan Pike

Sarah is growing up fast. She swings on swings, slides down slides, and climbs trees. Whenever she falls, her mother sweeps her up in her arms and soothes away the hurt. Her mother is always there for her—on her first day of school, when she falls in love for the first time, and finally when she leaves home and starts a family of her own. It is then that Sarah realizes what a wonderful gift her mother has given her. As she watches over a daughter of her own, Sarah passes on that gift, helping her child through the trials of growing up with a gentle strength and enduring love. This beautiful testament to the powerful bond between mothers and daughters will move and inspire mothers while reassuring their daughters that they have a special safety net that will never let them down. Anna Strauss was only sixteen-years-old when she was inspired to write this story as a gift for her mother. Now her enchanting story makes a perfect gift to celebrate the special mother/daughter bond on Mother's Day, Graduation Day, and all year round.

Aimed at helping the physics student to develop a solid grasp of basic graduate-level material, this book presents worked solutions to a wide range of informative problems. These problems have been culled from the preliminary and general examinations created by the physics department at Princeton University for its graduate program. The authors, all students who have successfully completed the examinations, selected these problems on the basis of usefulness, interest, and originality, and have provided highly detailed solutions to each one. Their book will be a valuable resource not only

to other students but to college physics teachers as well. The first four chapters pose problems in the areas of mechanics, electricity and magnetism, quantum mechanics, and thermodynamics and statistical mechanics, thereby serving as a review of material typically covered in undergraduate courses. Later chapters deal with material new to most first-year graduate students, challenging them on such topics as condensed matter, relativity and astrophysics, nuclear physics, elementary particles, and atomic and general physics.

In school, but "locked out" 13 youth, each with fewer than 10 productive words to use to build their relationship with families, teachers, and friends. That is, until they were introduced to the System for Augmenting Language, or SAL. In a wonderful meshing of science and the real world, this remarkable book chronicles the process of language learning through augmented means for people who have significant difficulty acquiring spoken language. In engaging storytelling style, speech-language pathologist Ronski and psychologist Sevcik describe how they carried their research from language lab to school and in the process changed the lives of the youth to whom they brought the SAL. A replicable system that fosters naturalistic exchanges between communicative partners using electronic speech-output devices, the SAL extends the power of communication to children otherwise locked out of the world around them. With a new level of vocabulary mastery, students enjoy not only enhanced communicative skills but also higher judgments of competence from both familiar and unfamiliar observers. One award-winning SAL application, Project FACTT (Facilitating Augmentative Communication Through Technology) provides innovative augmentative communication services to school-age children with severe disabilities and is described in detail.
