This book examines the regulatory framework, regulatory objectives, regulatory logics, regulatory instruments, regulatory failures, and regulatory responses in China's financial market after the global financial crisis. The book provides an in-depth analysis of China's contemporary financial regulatory system, focusing on risks, regulation, and policies in practice. By drawing on public and private interest theories relating to financial regulation, the book contends that the controlled development of the banking sector, and the financial sector generally, has transformed China's banks into more market-oriented institutions and increased public sector growth. However, China's financial market and financial regulation have some inherent weaknesses and deficiencies. This book also offers insights into how this can be improved or adapted to minimize systemic risks in China's financial sector. This

book tries to prove that financial regulation is not just a vehicle for maintaining efficient financial markets but a primary tool through which the Chinese government achieves its political and economic objectives. More fundamentally, according to the law and finance theory, strong market and vibrant judicial systems are needed to further modernize China's financial markets and market economy. The book will be a useful reference for anyone interested in learning from the Chinese experience.

This report describes homegrown violent jihadists and the plots and attacks that have occurred since 9/11. This report also provides official definitions for terms such as "homegrown," "jihadist," and "violent jihadist." The report also discusses the radicalization process and the forces driving violent extremist activity. It analyzes post-9/11 domestic jihadist terrorism, describes law enforcement and intelligence efforts to combat terrorism and the challenges associated with those efforts. It also outlines actions underway to build trust and partnership between community groups and government agencies and the tensions that may occur between law enforcement and engagement activities.

Beginning in 1963, to facilitate the expansion of training

capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
