Exquisitely produced to reflect Dieter Rams' aesthetic philosophy, this book presents highlights from a forty-year career designing iconic consumer products that enhance our daily lives. For decades, anyone who cared about product design looked to the Braun label when choosing their appliances, radios, and other consumer items. Now Dieter Rams, the guiding force behind the Braun look, breaks down his design principles and processes in this elegant book. Enumerating each of his ten principles such as good design is innovative; good design is aesthetic; good design is useful, etc., this book presents one hundred items that embody these guidelines. Readers will find items that are familiar such as the ubiquitous coffee grinder but also those that are more unusual such as shelving systems and cigarette lighters. A fascinating essay places Dieter Rams in the context of modern design, from Bauhaus to Philip Johnson. Archival materials include photos of Rams' design team and excerpts from his publications and speeches.

The book closes with a chronological overview of design icons, categorized by function, that show the enormous breadth of Rams' vision. Taken together, these images and texts offer the most comprehensive overview of Dieter Rams' work to date and will serve as both a reference and an inspiration for anyone interested in how and why good design matters.

Psychological studies of touch and blindness have been fraught with controversy. Is it necessary to explain perception in terms of representation and inferential processes? In addition, psychologists differ in the relative importance they place on the modality of sensory stimulation for subsequent perceptual experiences. Thus, some psychologists argue that touch can do many of the things that are accomplished by vision, and claim that the mode of sensory stimulation is not critically important for perception. Others suggest that there are important consequences of a lack of visual experience, arguing for the importance of multiple forms of sensory input for conceptual development. A deep theoretical split divides researchers in these areas. Many researchers adopt a cognitive orientation, relate research on touch and blindness to higher order processes, such as memory and concept formation. Others adopt a theoretical perspective, explaining perception without recourse to concepts like mind. As part of the Debates in Psychology Series, this book clarifies the issues which divide the field of touch.
