The modeling of minerals and silicated materials is a difficult challenge faced by Solid State Physics, Quantum Chemistry and Molecular Dynamics communities. The difficulty of such a modeling is due to the wide diversity of elements, including heavy atoms, and types of bonding involved in such systems. Moreover, one has to consider infinite systems: either perfect crystals or glasses and melts. In the solid state a given chemical composition gives rise to numerous polymorphs, geometrically closely related. These polymorphs have very similar energies and related thermodynamical properties which explain the complexity of their phase diagrams. The modeling of silicates and minerals covers a wide field of applications ranging from basic research to technology, from Solid State Physics to Earth and Planetary science. The use of modeling techniques yields information of different nature. In the case of chemical studies, we can mention investigations on catalytic processes occurring on surfaces and in zeolite cages. These calculations find possible applications in chemical engineering, in particular in the oil industry.

The Unreality of Time Legare Street Press

This new text, intended for the senior undergraduate finite element course in civil or mechanical engineering departments, gives students a solid, practical understanding of the principles of the finite element method within a variety of engineering applications. Hutton discusses basic theory of the finite element method while avoiding variational calculus, instead focusing upon the engineering mechanics and mathematical background that may be expected of senior engineering students. The text relies upon basic equilibrium principles, introduction of the principle of minimum potential energy, and the Galerkin finite element method, which readily allows application of finite element analysis to nonstructural problems. The text is software-independent, making it flexible enough for use in a wide variety of programs, and offers a good selection of homework problems and examples. A Book Website is also included, with PowerPoint images of key figures; complete problem solutions (password protected); the FEPC finite element program for student use; instructions on FEPC and its use with the text; and links to commercial FEA sites.

Three decades have passed since my first personal experiences, influences and contacts with computer applications in the field of medicine. These experiences were influenced by diverse presentations, publications and seminars concerning various applications of information technology as early as in 1970 (Univac International Executive Centre, Rome). The first clinical proposals and discussions during the first "World Congress of Intensive Care Medicine" (London 1974) strongly impressed me, since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology. In 1975, when I started my radiology residency, my clinical and academic interests were focused on two major topics: (i) interventional radiology and the clinical responsibility of the radiologist for the patient and (ii) the improvement of radiological services for both the clinician and the patient through the use of digital technology. These two topics, firstly interventional radiology and, secondly, computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my "personal evolution" of medicine, especially of digital radiology.

"Koudelka's unsentimental, stark, brooding, intensely human imagery reflects his own spirit, the very essence of an exile who is at home wherever his wandering body finds haven in the night." -Cornell Capa In 1988, Josef Koudelka published what was to become one of his most famous and canonical series: Exiles. These gorgeously austere black-and-white images described the travels and everyday life of the peoples he encountered while roaming Europe. Josef Koudelka: The Making of Exiles is an exploration of the genesis and the making of this photographic journey. Enhanced by numerous photographs that have never been published--in particular the photographer's self-portraits--and captions by Koudelka, it includes numerous archival documents (such as reproductions of his travel journals), thumbnail reproductions of the book's layout, an introduction by curator Clément Chéroux and an essay by photo-historian Michel Frizot, who spent hours interviewing Koudelka. Josef Koudelka was born in Moravia in 1938. Initially an aeronautic engineer, he launched full time into photography in the late sixties. In 1968, he photographed the Soviet invasion of Czechoslovakia, publishing

the results under the pseudonym P.P. (Prague Photographer). Koudelka left Czechoslovakia in 1970 and was briefly stateless before obtaining political asylum in England. Shortly afterwards, he joined Magnum Photos. In 1975 he published *Gypsies*. Koudelka has exhibited at the MoMA and at the International Centre of Photography in New York, at the Hayward Gallery in London, the Stedelijk Museum in Amsterdam and the Palais de Tokyo in Paris.

Biosensors for Virus Detection Springer Science & Business Media

This book includes an international group of researchers who present the latest achievements in the field of enzyme, immune system, and microbial and nano-biosensors. It highlights the experimental evidence for formation of biological fuel cells (BFCs)-which has a dual purpose - as a device that produces electricity and the systems which produce it simultaneously cleaning up the environment from polluting organic compounds. Considering the work in the field of macro, micro and nano-biosensors, considerable attention is paid to the use of nanomaterials for the modification of working electrodes. Nanomaterials in some cases can significantly improve the parameters of analytical systems. Readers will be interested in the projection of the presented theoretical and experimental materials in the field of practical application of modern analytical

developments. The presented results in many cases imply the possibility of using the created models of macro, micro and nano-biosensors, and biofuel elements in the field of health, and protection/restoration of the environment. It includes information about all existing types of transducers of signals in biosensors - electrochemical, optical and quantum-optics, thermoelectric, data of atomic force microscopy, piezoelectric, and more. On the basis of these principles, descriptions are given about the functioning of macro, micro and nano-biosensors for the detection of compounds used in medicine, detection of compounds that clog the environment, and thus affect human health, for compounds that are potentially the basis for the production of drugs, for the selection of compounds that have medicinal activity, for immunodetection, and to assess the quality of food. These questions form the basis of research carried out in the field of biosensors in the world. Since the described models of biosensors have high sensitivity, high measurement speed and selectivity, the described results attract the attention of both the ordinary reader and business class specialists who create and implement analytical technologies. This book is very useful for researchers in life sciences, chemical sciences, physics, and engineering. In addition, it will be useful for the persons working in industry. Advanced technologies specialists will be attracted by the novelty of the proposed solutions and their relevance and ease of implementation. Since the studies contain sections describing the parameters of different biosensors, BFCs, they are easily navigated into assessing the effectiveness of the practical use of the proposed device. The relevant sections indicate such characteristics as detection ranges, life span, type of biological material used, the method of formation of the bio-receptor part. These parameters are of interest to both developers of new models of biosensors and BFC, and their manufacturers.

"Spectacular . . . a majestic collection that captures the drama of everyday existence in war zones around the world. . . . There is no disputing the impact of this revelatory collection." -BookPage From the Pulitzer Prize-winning photojournalist and New York Times bestselling author, a stunning and personally curated selection of her work across the Middle East, South Asia, and Africa Pulitzer Prize-winning photojournalist and MacArthur Fellow Lynsey Addario has spent the last two decades bearing witness to the world's most urgent humanitarian and human rights crises. Traveling to the most dangerous and remote corners to document crucial moments such as Afghanistan under the Taliban immediately before and after the 9/11 attacks, Iraq following the US-led invasion and dismantlement of Saddam Hussein's government, and western Sudan in the aftermath of the genocide in Darfur, she has captured through her photographs visual testimony not only of war and injustice but also of humanity, dignity, and resilience. In this compelling collection of more than two hundred photographs, Addario's commitment to exposing the devastating consequences of human conflict is on full display. Her subjects include the lives of female members of the military, as well as the trauma and abuse inflicted on women in male-dominated societies; American soldiers rescuing comrades in the Korengal Valley of Afghanistan, and Libyan opposition troops trading fire in Benghazi. Interspersed between her commanding and arresting images are personal journal entries and letters, as well as revelatory essays from esteemed writers such as Dexter Filkins, Suzy Hansen, and Lydia Polgreen. A powerful and singular work from one of the most brilliant and influential photojournalists working today, *Of Love & War* is a breathtaking record of our complex world in all its inescapable chaos, conflict, and beauty.

The phenomena of Japan emerging as one of the most competitive industrial nations in the twentieth century and the general shift of competitiveness to East Asia since the 1980s have been widely studied by many scholars from different fields of the social sciences. Drawing on sources from Japanese, Swiss, and American archives, the historical analysis of this book tackles a wide range of actors and sheds light on the various processes that enabled Japanese watch companies to transfer technology and expand commercially starting in the second half of the nineteenth century. By exploring the case of the watch industry, this book serves to establish a better understanding of the origins of the competitiveness of Japanese manufacturing and its evolution until its decline in the post-bubble economy (in the 1990s and 2000s).

In his philosophical masterpiece 'The Unreality of Time', John McTaggart Ellis McTaggart delves into the intricate and complex concept of time. Written in a clear and concise prose, the book challenges the conventional understanding of time as a linear progression from past to future. McTaggart's exploration of time is steeped in metaphysical musings and logical arguments, offering readers a thought-provoking journey into the nature of existence and reality. The book is a seminal work in the field of metaphysics and continues to spark debates and discussions among philosophers and scholars studying time and space.

Introduces the basic concepts of FEM in an easy-to-use format so that students and professionals can use the method efficiently and interpret results properly Finite element method (FEM) is a powerful tool for solving engineering problems both in solid structural mechanics and fluid mechanics. This book presents all of the theoretical aspects of FEM that students of engineering will need. It eliminates overlong math equations in favour of basic concepts, and reviews of the mathematics and mechanics of materials in order to illustrate the concepts of FEM. It introduces these concepts by including examples using six different commercial programs online. The all-new, second edition of *Introduction to Finite Element Analysis and Design* provides many more exercise problems than the first edition. It includes a significant amount of material in modelling issues by using several practical examples from engineering applications. The book features new coverage of buckling of beams and frames and extends heat transfer analyses from 1D (in the previous edition) to 2D. It also covers 3D solid element and its application, as well as 2D. Additionally, readers will find an increase in coverage of finite element analysis of dynamic problems. There is also a companion website with examples that are concurrent with the most recent version of the commercial programs. Offers

Already winning acclaim as one of the best accounts of combat ever written, *Black Hawk Down* is a minute-by-minute, heart-stopping account of the 1993 raid on Mogadishu, Somalia. Late in the afternoon of Sunday, October 3 1993, 140 elite US Soldiers abseiled from helicopters into a teeming market neighbourhood in the heart of the city. Their mission was to abduct two top lieutenants of a Somali warlord and return to base. It was supposed to take them about an hour. Instead, they were pinned down through a long and terrible night in a hostile city, fighting for their lives against thousands of heavily armed Somalis. Two of their high-tech helicopters were shot out of the sky. When the unit was rescued the following morning, eighteen American soldiers were dead and more than seventy badly injured. The Somali toll was far worse - more than five hundred killed and over a thousand injured. Authoritative, gripping, and insightful, *Black Hawk Down* is destined to become a classic of war reporting. It is already the most accurate, detailed account of modern combat ever written.
