The Speckled Beauty Titan Books (US, CA)

NEW YORK TIMES BEST SELLER • From the best-selling, Pulitzer Prize-winning author of *All Over but the Shoutin'*, the warmhearted and hilarious story of how his life was transformed by his love for a poorly behaved, half-blind stray dog. Speck is not a good boy. He is a terrible boy, a defiant, self-destructive, often malodorous boy, a grave robber and screen door moocher who spends his days playing chicken with the Fed Ex man, picking fights with thousand-pound livestock, and rolling in donkey manure, and his nights howling at the moon. He has been that way since the moment he appeared on the ridgeline behind Rick Bragg's house, a starved and half-dead creature, seventy-six pounds of wet hair and poor decisions. Speck arrived in Rick's life at a moment of looming uncertainty. A cancer diagnosis, chemo, kidney failure, and recurring pneumonia had left Rick lethargic and melancholy. Speck helped, and he is helping, still, when he is not peeing on the rose of Sharon. Written with Bragg's inimitable blend of tenderness and sorrow, humor and grit, *The Speckled Beauty* captures the extraordinary, sustaining devotion between two damaged creatures who need each other to heal.

"I have to hand it to Bradshaw and Ellis: Once you suss out their basic cat-training philosophy, their methods totally work." -- Slate We often assume that cats can't be trained, and don't need to be. But in *The Trainable Cat*, bestselling anthrozoologist John Bradshaw and cat expert Sarah Ellis show that cats absolutely must be trained in order to enrich the bond between pet and owner. Full of training tips and exercises -- from introducing your cat to a new baby to helping them deal with visits to the vet -- *The Trainable Cat* is the essential cat bible for cat owners and lovers. "I doubt you'll find a more well-informed or scientific book on cats that better shows you how feline thinking works." -- Times (UK)

Fans of Elizabeth Moon and Anne Leckie will love this first thrilling adventure in an epic space opera trilogy—set in a future where alien technology comes at a steep price: human life. Aliens came to Earth 40 years ago. Their anatomy proved unfathomable and all attempts at communication failed. But through trade, humanity gained technology that allowed them to colonize the stars. The price: live humans for every alien faster-than-light drive. Kara's sister was one of hundreds exchanged for this technology, and Kara has little love for aliens. So when she is drafted by GalDiv—the organization that oversees alien trades—it is under duress. A group of colonists have been kidnapped by aliens and taken to an uncharted planet, and an unusual team is to be sent to negotiate. As an ex-army sniper, Kara's role is clear. But artist Marc has no combat experience, although the team's pre-cog Tse is adamant that he has a part to play. All three know that success is unlikely. For how will they negotiate with aliens when communication between the species is impossible?

They came after the Diseray. Some were terrors ripped from our collective imaginations, remnants of every mythology across the world. And some were like nothing anyone had ever dreamed up, even in their worst nightmares. Monsters. Long ago, the barriers between our world and the Otherworld were ripped open, and it's taken centuries to bring back civilization in the wake of the catastrophe. Now, the luckiest Cits live in enclosed communities, behind walls that keep them safe from the hideous creatures fighting to break through. Others are not so lucky. To Joyeaux Charmand, who has been a Hunter in her tight-knit mountain community since she was a child, every Cit without

magic deserves her protection from dangerous Othersiders. Then she is called to Apex City, where the best Hunters are kept to protect the most important people. Joy soon realizes that the city's powerful leaders care more about luring Cits into a false sense of security than protecting them. More and more monsters are getting through the barriers, and the close calls are becoming too frequent to ignore. Yet the Cits have no sense of how much danger they're in-to them, Joy and her corp of fellow Hunters are just action stars they watch on TV. When an act of sabotage against Joy takes an unbearable toll, Joy uncovers a terrifying conspiracy in the city. There is something much worse than the usual monsters infiltrating Apex. And it may be too late to stop them?

Domhoff's neurocognitive model helps explain the neural and cognitive bases for dreaming. He discusses how dreams express conceptions and concerns, and how they are consistent over years and decades. He also shows that there may be limits to understanding the meaning of dreams as there are many aspects of dream content that cannot be related to waking cognition or personal concerns. In addition, the book includes a detailed explanation of the methods needed to test the new model as well as a case study of a comprehensive dream journal. Particularly valuable is a discussion of a new system of content analysis that can be used for highly sophisticated studies of dream content. In this provocative book, Domhoff sets forth a convincing argument that will encourage a resurgence in dream research among both new and established cognitive psychologists and neuropsychologists.

A key topic of many technical discussions has been the development of alternative fuels to power the compression ignition engine. Reasons for this include the desire to reduce the dependency on petroleum-based fuel and, at the same time, to reduce the particulate matter (PM) and NOx emissions. Also, there has been interest generated in the diesel engine because of the reduction in greenhouse gases that has been proposed during the 2008-2012 time frame in Europe and the regulations that affect diesel engines in the United States.

The International Standard Classification of Occupations 2008 (ISCO-08) is a four-level hierarchically structured classification that covers all jobs in the world. Developed with the benefit of accumulated national and international experience as well as the help of experts from many countries and agencies, ISCO-08 is fully supported by the international community as an accepted standard for international labour statistics. ISCO-08 classifies jobs into 436 unit groups. These unit groups are aggregated into 130 minor groups, 43 sub-major groups and 10 major groups, based on their similarity in terms of the skill level and skill specialisation required for the jobs. This allows the production of relatively detailed internationally comparable data as well as summary information for only 10 groups at the highest level of aggregation. Each group in the classification is designated by a title and code number and is associated with a definition that specifies the scope of the group. The classification is divided into two volumes: Volume I presents the structure and definitions of all groups in ISCO-08 and their correspondence with ISCO-88, which it supersedes, while Volume II provides an updated and expanded index of occupational titles and associated ISCO-08 and ISCO-88 codes.

This book by Corey H. Evans, Russell D. White, and coauthors is a gem. There was a time when exercise testing was largely limited to cardiologists, but no more. Exercise testing, which provides information on fitness, the risk of coronary disease, and all around vitality, is now being performed in the offices of primary care physicians across the United States. Although there is a significant risk in some populations, a careful doctor who takes the trouble to become knowledgeable in exercise physiology and the pathophysiology of coronary artery disease can use exercise testing to improve his ability to give excellent, preventive medicine. Over the years I have read many books on this subject, and even contributed to some, and this one rates right up there with the best.

Likemany multiauthored books there is some repetition, but this is not all bad. A careful study of the various chapters will provide a depth of knowledge that will come in good stead when problems arise. I can especially recommend the chapter on exercise physiology. When the reader has mastered the material presented in this chapter, he has acquired a knowledge base so that he can become an expert in exercise testing equal to almost anyone. Over the years I have been privileged to know several of the authors and have followed their publications. Their contributions to our knowledge base in this field have been considerable. Acquiring this book and becoming familiar with its contents will set you apart in the field of exercise testing.

Essential reference for researchers and experts in industry highlighting the rapidly growing field of hydroxyapatite-based catalysts and their application in various chemical processes. Hydroxyapatite (Ca₁₀(PO₄)₆(OH)₂) is the main mineral component of human and animal bones. It is largely applied in the field of biomaterials due to its biocompatibility. Recently, hydroxyapatite-based materials have especially gained a lot of attention by researchers in catalysis, as they are versatile and have shown precious properties of a good catalyst and catalyst support such as excellent ion-exchange capacity,

high porosity, very low water solubility, controlled basicity/acidity, and good thermal stability at high temperatures. Design and Applications of Hydroxyapatite-Based Catalysts gives a detailed overview of the synthesis, characterization, and use of hydroxyapatite-based materials in catalysis. It covers synthetic hydroxyapatites (from pure chemicals or waste), natural apatites and materials from eggshells and animal bones. The application of hydroxyapatite-based catalysts in selective oxidation, deoxygenation, selective hydrogenation, dehydrogenation reactions, organic synthesis, as well as reforming processes and production of energy carriers is reviewed. Moreover, electrocatalysis and photocatalysis using hydroxyapatite-based materials are discussed. Kinetic and mechanism studies of various chemical processes over hydroxyapatite-based catalysts are also presented. This is the first book solely dedicated to hydroxyapatite-based materials and their use in catalysis. Covers synthesis and characterization, surface and structure studies, kinetic and mechanism aspects, and various applications in heterogeneous catalysis, electrocatalysis, and photocatalysis. Aimed at further stimulating research in the field Design and Applications of Hydroxyapatite-Based Catalysts is an indispensable source-of-information for researchers in academia and industry working in catalysis. This book provides an elementary-level introduction to R, targeting both non-statistician scientists in various fields and students of statistics. The main mode of presentation is via code examples with liberal commenting of the code and the output, from the computational as well as the statistical viewpoint. Brief sections introduce the statistical methods before they are used. A supplementary R package can be downloaded and contains the data sets. All examples are directly runnable and all graphics in the text are generated from the examples. The statistical methodology covered includes statistical standard distributions, one- and two-sample tests with continuous data, regression analysis, one- and two-way analysis of variance, regression analysis, analysis of tabular data, and sample size calculations. In addition, the last four chapters contain introductions to multiple linear regression analysis, linear models in general, logistic regression, and survival analysis.

From a pioneer in the field of interspecies communication for more than forty years, Penelope Smith's *Animals in Spirit* teaches you how to release the feelings of loss and separation that follow the death of a beloved pet and instead stay connected to your pet before, during, and after they cross over the rainbow bridge. Losing an animal companion can be a painful experience, yet by examining their transition from a spiritual perspective, *Animals in Spirit* explores the process of dying from the viewpoints of both pets and their people. Learn how animals choose their paths in each life and the knowledge they leave behind for their human families. As animals make their way from the physical into the spiritual realm, *Animals in Spirit* can strengthen the union with our beloved friends by teaching us to accept and understand the full experience of the cycle of life. Our dear pets and companions may be gone from this world, but there is comfort to be had in the knowledge that we can still commune with them and that this is not really goodbye. With true stories, insights from animals and their human friends, as well as meditations to ease the mourning process or help you to communicate with animals in the spirit realm, *Animals in Spirit* will help heal the feelings of grief and separation by connecting you to your faithful companion in spirit.

It is considered by many to be the biggest upset in the history of boxing: James "Buster" Douglas knocked out then-undefeated and seemingly invincible Heavyweight Champion Mike Tyson in the tenth round in 1990. *The Last Great Fight* takes readers not only behind the scenes of this epic battle, but inside the lives of two men, their ambitions, their dreams, the downfall of one and the rise of another. Using his exclusive interviews with both Tyson and Douglas, family members, the referee, the cutmen, trainers and managers, commentators and HBO staff covering the fight in Tokyo, Layden has crafted a human drama played out on a large stage. This is a compelling tale of shattered dreams and, ultimately, redemption.

Students today are writing more than ever. Everyone's an Author bridges the gap between the writing students already do--online, at home, in their communities--and the writing they'll do in college and beyond. It builds student confidence by showing

that they already know how to think rhetorically and offers advice for applying those skills as students, professionals, and citizens. Because students are also reading more than ever, the third edition includes new advice for reading critically, engaging respectfully with others, and distinguishing facts from misinformation.
