For the one-semester human anatomy laboratory course. Everything students need for a successful lab experience With 30 exercises covering all body systems, a clear, engaging writing style, and full-color illustrations, Human Anatomy Laboratory Manual with Cat Dissections, 9th Edition provides everything needed for a successful lab experience. Visual Summary Tables present complex information, and "Why This Matters" boxes help students relate the lab activity to a real-life or clinical example. The 9th Edition features

new Clinical Application Questions that challenge students to apply lab concepts and critical-thinking skills to real-world clinical scenarios. And new full-color illustrations and photos replace many black and white line drawings to help students differentiate among structures and more easily interpret diagrams. The lab manual complies with the illustration and presentation style of Human Physiology text, but can be paired with any human anatomy textbook.

Get an up-close look at canine anatomy with the only complete guide to the dissection of the dog. Utilizing detailed descriptions and more than 300 high-quality color anatomic drawings, Guide to the Dissection of the Dog, 8th Edition walks you through how to perform precise canine dissections while developing your understanding of basic mammalian structure and specific canine features. Each chapter offers self-contained guidance on the dissection of a specific body part, allowing you to perform dissections in whatever sequence you choose. Other helpful features include: an emphasis on the anatomical knowledge and terminology from the Nomina Anatomica Veterinaria; a comprehensive list of all figures and tables; and an extensive list of references for further research. In all, this one-of-a-kind canine dissection manual is the resource you need to better understand and review what you are learning in your first-year dissection course. The only hands-on canine dissection guide available reinforces the information that you learn in your mandatory first-

year dissection course. Body part organization follows the order of dissection commonly taught in veterinary schools and enables you to perform dissections in any sequence. More than 300 high-quality color anatomic drawings guide each step-by-step dissection procedure. Radiographs, CAT scans and MR images appear throughout the text where relevant to help you visualize internal anatomic features that can only be revealed through these diagnostic methods. Comprehensive list of tables and figures makes it easy to find key images and information at a glance. Detailed descriptions of anatomical structures ensure the most thorough, precise canine dissections. Clear and easy-to-follow instructions guide you in properly performing dissection techniques. Option of a digital book on Pageburst offers high-resolution illustrations that are directly linked to the text — letting you search for any text work or anatomic clue and discover any instance of what you want to read more about. NEW! High-resolution digital images have been added throughout the book to provide a clinical context for the drawings and to highlight internal anatomic structures with excellent contrast resolution. NEW! Additional transverse sections of the brain give you the anatomic knowledge you need to accurately interpret MR images. NEW! Updated figure labels and text adhere to the latest Nomina Anatomica Veterinaria.

Human Anatomy Laboratory Manual with Cat Dissections W H Freeman & Company

The Bohensky Dissection Series has been used successfully by more than 300,000 biology students nationwide. Each book in the series is designed to guide the student through the study of

anatomical structures. The books do this through the use of clearly marked photographs and illustrations. Accompanying text offers the student both easy-to-follow dissection instructions and factual information about the section under observation. At the end of each chapter there are tests which can be used for self-study or for grade course evaluation. Within the traditional dissection portion of a biology course, many programs include the sheep heart, eye, and brain. Within many of these guides, the author has incorporated photographs of these structures to more closely follow standard course curriculum. The author also provides important information on human organs such as the eye, ear, and heart. In this way, the student can better understand the role and function of these organs as they relate to human life processes. Add to this each book's large-size format, lay-flat spiral binding, and reasonable cost, and you can see why the Bohensky Dissection Series has become one of the most successful dissection guides used throughout this country's schools.

Human Anatomy W. H. Freeman

Key Benefit: This new four-color lab manual combines the highly praised artwork from Martini's Human Anatomy, Mike Wood's easy-to-follow writing style, and reader-focused features to make this the most reader-friendly Human Anatomy Lab Manual on the market. These features help readers to retain concepts and terms that they learned in class and then directly apply that knowledge to their work in the laboratory. This lab manual can be used with any human anatomy book available. Key Topics: Introduction to the Human Body, Use of the Microscope, The Cell and Cell Division, Tissues, The Integumentary System, Organization of the Skeletal System, The Axial Skeleton, The Appendicular Skeleton, Articulations, Organization of

Skeletal Muscles, Axial Muscles, Appendicular Muscles, Organization of the Nervous System, The Spinal Cord and Spinal Nerves, The Brain and Cranial Nerves, General Senses, Special Senses: Olfaction and Gustation, Special Senses: The Eye, Special Senses: The Ear, The Endocrine System, The Blood, The Heart, The Lymphatic System, The Respiratory System, The Digestive System, The Urinary System, The Reproductive System, Human Development, Surface Anatomy, Cat Nervous System, Cat Endocrine System, Cat Vascular System, Cat Lymphatic System, Cat Respiratory System, Cat Digestive System, Cat Urinary System, Cat Reproductive System Market: Intended for those interested in learning the basics of human anatomy

This manual represents an experiment both as to choice of animal and plan of work. The dog has been chosen as subject of dissection instead of a large herbivore for several reasons. The student-specimen ratio can be reduced with a resultant increase in time for dissection by the individual student. At the same time more material can be covered in a given period than by using the horse or ox owing to the smaller size of the specimen and the ease with which structures are cleaned and visualized. These and other advantages result not only in better preparation of a student to study the more economically important animals, but also increases the time that can be devoted to the study of those regions most often involved surgically. The dog is cheaply purchased, preserved and prepared for dissection. After the arteries are filled with red latex they stand out more vividly than in life. The large systemic veins can also be injected. A large part of a dissected dog can be seen in a single field of vision. Structures can be left in place, e.g., the heart is dissected without removing it from the thorax. Terms used in

veterinary anatomy are largely taken from human anatomy. Since in the dog structures closely resemble those of man, an advantage in making homologies to the mutual benefit of teacher and student results. In general all terms have been Anglicized except most names of muscles, and even these Latin names have been used as if they were English in some places. The Latin terms were retained to differentiate muscles from nerves and vessels; furthermore most veterinarians prefer to use them. The improved BNA or INA terminology has been used almost entirely. Needless to say the excellent texts of Ellenberger and Baum, and Sisson and Grossman have been used frequently as references. It is probable that both have influenced the terminology more than they should, since a uniform terminology is desired by all anatomists.

The cat has been used as a subject for dissection in the study of mammalian anatomy for almost two centuries. The very popular Pictorial Anatomy of the Cat by Stephen G. Gilbert, originally published in 1967 and now in its 12th printing, has been used in countless laboratories as a guide to dissection and supplement to introductory textbooks. Outline of Cat Anatomy is an abridged version of the original guide, modified for practical use in one-semester courses. It employs anatomical terms used in human rather than veterinary anatomy and includes illustrations of human anatomy that may be compared with those of the cat, especially useful for the many students who do not have access to human dissections. Gilbert's earlier Pictorial Anatomy of the Cat is "an excellent, well-illustrated dissection guide for use in courses in comparative anatomy. The text is informative and accurate, and instructions for dissection are clear and helpful.... Highly recommended." Choice

Known for its clear descriptions and art program, this lab manual examines every structure and function of the human body. It features dissection of the cat, numerous physiological experiments, and an emphasis on the study of anatomy through histology. In addition to a large variety of illustrations, helpful learning support includes lists of appropriate terms accompanying art, numerous photomicrographs and specimen photos, phonetic pronunciations and derivations of terms, diagrams of lab equipment, and lab report questions and report templates. An instructor's guide is available and provides detailed information for instructors about needed materials, suggestions, and answers to questions.
