For the last eight years, James and Kate have been working together to design, implement and evaluate a whole-school, evidence-informed approach to teaching and learning known as Learning Skills. An eight-year study with the University of Cambridge revealed that Learning Skills led to significant gains in subject learning, with rapid gains among students from disadvantaged backgrounds. In this practical guide for teachers and school leaders, James and Kate reveal a recipe for success rooted in three key concepts: metacognition (reflecting on learning); self-regulation (taking ownership over the learning process); and oracy (developing high-quality speaking and listening skills). This is a book about what happened when a small team of teachers seized an opportunity to provide their students with the knowledge, the skills and the confidence to take control of their own learning. This journey began with a question: how and what would we teach, if there was no one watching? On the other side of fear is the teacher you want to be, and the children you'd like to teach...

'What the book does extremely well is do describe the way things are in terms of the requirements of the Framework for Teaching English, the curriculum and the new specifications - and for this reason it is likely to be most useful to those contemplating English tech9ng in the maintained sector from outside - returnees, aspiring NQTs or those in the independent sector' - Times Educational Supplement 'Instead of taking us yet again on a tour through the four modalities of English, this book's tri-partite structure takes a refreshingly different approach by offering thought-provoking argument grounded in classroom practicality' - Nick McGuinn, University of York Students' comments on Teaching Secondary English: 'The book is written in clear, digestible terms, offering many practical ideas for teaching the key skills and the wide range of material encountered in the English classroom. ... It is the kind of book which can be dipped into, which is particularly useful for people who spend most of their time planning lessons!' 'Teaching Secondary English is a must for student teachers and NQTs. It is a clear, comprehensive and practical guidebook dealing not solely with theory and pedagogy, but with the very real issues facing new teachers today' 'It is clear that Teaching Secondary English, unlike so many textbooks on the subject, is written by someone with recent classroom experience and this helps the reader to trust and respect the advice it purports. I certainly feel it is grounded in practicalities not "pie in the sky" theory that will not work in most 'real' classrooms!' This book enables English teachers to implement change and rise to new challenges, while remaining true to an ethically and socially just position which provides the rationale for their vocation. The author describes and evaluates recent changes to English teaching brought about by initiatives such as the Literacy Strategy, the new 'A' levels and the requirement to focus on spiritual, moral, social and cultural development. Examples of innovative teaching and learning strategies are provided throughout. The author helps teachers to foster keen readers, writers and communicators. He shows how they can enable their students to acquire skills and knowledge, as well as to recognize the value of aesthetic experience, emotional literacy and spiritual and moral response to literature in their own lives and in their communities. This book is essential reading for PGCE students as well as practising teachers and all those involved in English in education.

[Policy, Practice, Reform, and Equity](#) Princeton Review

This book looks at the foundations of school self-evaluation from a scientific as from a practical perspective. Planning concepts, restructuring of education systems, organizational theory on schools, evaluation methodology and models of school effectiveness and school improvement are discussed as contributing to the overall conceptualization of school self-evaluation. A broad range of approaches is presented and methodological requirements are discussed. School self-evaluation contains controversial issues that reflect tension between the need for objectivity in a context that is permeated by values and potential conflicts of interests. Similar tensions may be seen to exist with respect to the static and "reductionist" aspects of available data collection procedures in a complex and dynamic situation and the appeal for external accountability on the one hand and improvement oriented self-reflection on the other. The mission of the book is to clarify these tensions and offer ways to deal with them in practical applications. The school effectiveness knowledge base is offered as a substantive educational frame of references that serves an important function in selecting relevant factors for data collection and the use of the evaluation results.

Although we can't see directly into students' minds, we do have Cognitive Load Theory, and this is the next best thing. "This research should make us extremely sceptical that the constant search for 'higher standards' and  
for ever-increasing achievement scores can do much more than put in place seemingly neutral  
devices for restratification." - Michael W Apple, John Bascom Professor of Curriculum and  
Instruction and Educational Policy Studies, University of Wisconsin, Madison Recent educational  
reforms have raised standards of achievement but have also resulted in growing inequalities based on  
'race' and social class. School-by-school 'league tables' play a central role in the reforms. These have  
created an A-to-C economy where schools and teachers are judged on the proportion of students  
attaining five or more grades at levels A-to-C. To satisfy these demands schools are embracing new  
and ever more selective attempts to identify 'ability'. Their assumptions and practices embody a new  
IQism: a simple, narrow and regressive ideology of intelligence that labels working class and minority  
students as likely failures and justifies rationing provision to support those (often white, middle class  
boys) already marked for success. This book reports detailed research in two secondary schools  
showing the real costs of reform in terms of the pressures on teachers and the rationing of educational  
opportunity. It will be important reading for any teacher, researcher or policymaker with an interest  
in equality in education.
