Translational Orthopedics: Designing and Conducting Translational Research covers the

principles of evidence-based medicine and applies these principles to the design of translational investigations. The reader will come to fully understand important concepts including case-control study, prospective cohort study, randomized trial, and reliability study. Medical researchers will benefit from greater confidence in their ability to initiate and execute their own investigations, avoid common pitfalls in translational orthopedics, and know what is needed in collaboration. Further, this title is an indispensable tool in grant writing and funding efforts. The practical, straightforward approach helps the aspiring investigator navigate challenging considerations in study design and implementation. The book provides valuable discussions of the critical appraisal of published studies in translational orthopedics, allowing the reader to learn how to evaluate the quality of such studies with respect to measuring outcomes and to make effective use of all types of evidence in patient care. In short, this practical guidebook will be of interest to every Medical Researcher or Orthopedist who has ever had a good clinical idea but not the knowledge of how to test it.

The volume brings together in a single reference source the world's leading thinkers on children's health and development. It sets out the basic concepts that underpin the study of child development and response to impairments to

development, including attachment, changes in brain structure, and resilience. The book explores the idea of life-course development, explaining how experiences at each stage in a person's life shapes his or her future. It goes on to example the relative contribution of societal, neighbourhood, school, family and individual influences to child well-being. This includes a look at the way these forces interact, such as when genes shape environments, and vice versa. The book summarises the evidence on the incidence and consequences of impairments to children's health and development, covering both the majority of typical children and the minority who experience significant problems. Educational sociologists have paid relatively little attention to children in middle childhood (ages 6 to 12), whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children's development. *Children, Schools, and Inequality* redresses that imbalance. It examines elementary school outcomes (e.g., test scores, grades, retention rates) in light of the socioeconomic variation in schools and neighborhoods, the organizational patterns across elementary schools, and the ways in which family structure intersects with children's school performance. Adding data from the Baltimore

Beginning School Study to information culled from the fields of sociology, child development, and education, this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close. Doris Enwistle, Karl Alexander, and Linda Olson show why the first-grade transition?how children negotiate entry into full-time schooling?is a crucial period. They also show that events over that time have repercussions that echo throughout children's entire school careers. Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools, *Children, Schools, and Inequality* can inform educators, practitioners, and policymakers, as well as researchers in the sociology of education and child development.
