From the Cayman Islands and the Isle of Man to the Principality of Liechtenstein and the state of Delaware, tax havens offer lower tax rates, less stringent regulations and enforcement, and promises of strict secrecy to individuals and corporations alike. In recent years government regulators,

hoping to remedy economic crisis by diverting capital from hidden channels back into taxable view, have undertaken sustained and serious efforts to force tax havens into compliance. In *Tax Havens*, Ronen Palan, Richard Murphy, and Christian Chavagneux provide an up-to-date evaluation of the role and function of tax havens in the global financial system-their history, inner workings, impact, extent, and enforcement. They make clear that while, individually, tax havens may appear insignificant, together they have a major impact on the global economy. Holding up to \$13 trillion of personal wealth-the equivalent of the annual U.S. Gross National Product-and serving as the legal home of two million corporate entities and half of all international lending banks, tax havens also skew the distribution of globalization's costs and benefits to the detriment of developing economies. The first comprehensive account of these entities, this book challenges much of the conventional wisdom about tax havens. The authors reveal that, rather than operating at the margins of the world economy, tax havens are integral to it. More than simple conduits for tax avoidance and evasion, tax havens actually belong to the broad world of finance, to the business of managing the monetary resources of individuals, organizations, and countries. They have become among the most powerful instruments of globalization, one of the principal causes of global financial instability, and one of the large political issues of our times.

The award-winning Civil War historian 's study " makes the case that Union cavalry had a tremendous effect on the course of the titanic battle " (J. David Petruzzini, author of *The Complete Gettysburg Guide*). On July 3, 1863, a large-scale cavalry fight was waged on Cress Ridge four miles east of Gettysburg. There, on what is commonly referred to as East Cavalry Field, Union horsemen under Brig. Gen. David M. Gregg tangled with the vaunted Confederates riding with Maj. Gen. Jeb Stuart. This magnificent mounted clash, however, cannot be fully appreciated without an understanding of what happened the previous day at Brinkerhoff 's Ridge, where elements of Gregg 's division pinned down the legendary infantry of the Stonewall Brigade, preventing it from participating in the fighting for Culp 's Hill that raged that evening. After arriving at Gettysburg on July 2 and witnessing the climax of the fighting at Brinkerhoff 's Ridge, Stuart knew that if he could defeat Gregg 's troopers, he could dash thousands of his own men behind enemy lines and wreak havoc. The ambitious offensive thrust resulted the following day in a giant clash of horse and steel on East Cavalry Field. The combat featured artillery duels, dismounted fighting, hand-to-hand engagements, and the most magnificent mounted charge and countercharge of the entire Civil War. This fully revised edition of *Protecting the Flank at Gettysburg* is the most detailed tactical treatment of the fighting on Brinkerhoff 's Ridge yet published, and includes a new Introduction, a detailed walking and driving tour with GPS coordinates, and a new appendix refuting claims that Stuart 's actions on East Cavalry Field were intended to be coordinated with the Pickett/Pettigrew/Trimble attack on the Union center on the main battlefield.

Everyone uses species. All human cultures, whether using science or not, name species. Species are the basic units for science, from ecosystems to model organisms. Yet, there are communication gaps between the scientists who name species, called taxonomists or systematists, and those who use species names—everyone else. This book opens the "black box" of species names, to explain the tricks of the name-makers to the name-users. Species are real, and have

macroevolutionary meaning, and it follows that systematists use a broadly macroevolution-oriented approach in describing diversity. But scientific names are used by all areas of science, including many fields such as ecology that focus on timescales more dominated by microevolutionary processes. This book explores why different groups of scientists understand and use the names given to species in very different ways, and the consequences for measuring and understanding biodiversity. Key selling features: Explains the modern, multi-disciplinary approach to studying species evolution and species discovery, and the role of species names in diverse fields throughout the life sciences Documents the importance and urgent need for high-quality taxonomic work to address today ' s most pressing problems Summarises controversies in combining different—sometimes quite different—datasets used to estimate global biodiversity Focusses throughout on a central theme—the disconnect between the makers and the users of names—and seeks to create the rhetorical foundation needed to bridge this disconnect Anticipates the future of taxonomy and its role in studies of global biodiversity
