This book provides the fundamental concepts and tools needed by Clinical Engineering (CE), also known as Health Technology Management (HTM), managers to properly manage their financial resources, as well as to prove to their senior leaders that they are comparing (benchmarking) well against their peers. After introducing basic accounting concepts and tools using a case study based on real data, different methods for financing the CE/HTM department are explored. Next, opportunities for improving financial performance are explained through analyses of budget, costs and productivity. After a critical review of various benchmarks available, proper ways to use them to evaluate performance and seek improvements opportunities are demonstrated, enabling CE/HTM managers to secure recognition and support from their senior leaders, as well as defend their departments against consultants and outsourcing companies.

ANSI/AAMI St79: Comprehensive Guide to Steam Sterilization and Sterility Assurance in Health Care Facilities Charles C Thomas Pub Limited

This publication is a collection of the papers presented at the 'First International Course on Hemodialysis Technology', Vicenza, June 2002: It covers a wide range of topics, including aspects of vascular access and new forms of monitoring access function. Moreover, anticoagulation strategies and antimicrobial treatment are debated, with special emphasis on temporary catheters and prosthetic devices. Membrane composition and structure, their methods of sterilization and performance are discussed by experts and manufacturers, bringing together in a unique way science, theory and manufacturing procedures. The same synthesis is

achieved with respect to hemodialyzers, adsorbent devices, dialysis techniques and machines. A new issue is the possibility of computer-assisted data collection and management: This subject is discussed by experts in electronic data management, together with managers of large dialysis networks, concentrating on matters of quality assurance and continuous quality improvement programs. Special attention is given to dialysate and water purity since this is the starting point for newer dialytic techniques such as online hemodiafiltration. Moreover, the results obtained from the IDOPPS study are incorporated into the discussion of different practice patterns and anemia management. Finally, future trends are explored including automatic sensors and biofeedback monitors. Covering various aspects of hemodialysis technology, this book will be a helpful tool for physicians and nurses, both for education and information.

This guide is designed to assist all those who are responsible for providing or overseeing formal education or practical experience that forms part of the initial professional development of aspiring professional accountants, or the continuing professional development of professional accountants. It is particularly relevant to professional accountancy organizations. It is also intended for policy makers and regulators who determine which organizations are licensed to certify professional accountants and related specializations, for example, audit professionals. The purpose of the guide is to • increase understanding of the gap between the current skills of many accountants in some regions and the skills that are relevant in increasingly digitized and globalized economies; • convey the essential features of Competency-Based Accounting Education, Training, and Certification (CBAETC); • provide a common reference framework for organizations pursuing CBAETC and the consultants working with them; • assist countries in developing in-country plans and implementing in-country processes that produce accountants with higher-order skills relevant to their economy's rapidly evolving needs; and • improve financial reporting, auditing, and regulation. This guide complements and builds on International
