You read a book, you recommend it to a friend. That friend tells another friend. And another... until the book becomes this year's word-of-mouth sensation. This is the first to analyze the power of the 'pass-it-on' phenomenon, introducing us to the architects of the mightily efficient, money-spinning model known as the Viral Loop - the secret behind some of the most successful businesses in recent history. Outfits such as Google, eBay, Flickr and Facebook all employ the model at their core; all have seen their stock valuations skyrocket within years of forming. The genius lies in the model's reliance on replication: what's the point of using Facebook if none of your friends can see your profile, or using Flickr if you can't share your photos? Where's the joy in posting a video on YouTube if no one watches it? In creating a viral product that people want, need and desire, growth can, and will, take care of itself. Find out why the Loop will catch us all up, sooner rather than later...

This book gathers a collection of studies by leading scholars on the Tomb of the Priests of Amun (Bab el-Gasus), where the burials of 153 individuals who lived under the 21st Dynasty have been unearthed, revealing the largest undisturbed tomb ever found in Egypt. This is the first publication to present a coherent vision of this find, with papers addressing a variety of topics including: the reorganization of the Theban necropolis under the 21st Dynasty; the sociological significance of the burials, as well as the funerary goods associated with them; the history of the collections that had been given away to foreign countries in 1893, including their reception and subsequent treatment in museums around the world and in Egypt; carpentry and decoration of anthropoid coffins, using non-invasive analysis of materials; and finally, diversity and meaning of coffin decoration. The volume releases the papers first presented at the international conference held at the Calouste Gulbenkian Foundation in Lisbon to celebrate the 125th Anniversary of the discovery of the Tomb.

101 Labs - Book Series Experts agree that we retain only 10% of what we read but 90% of what we do. Perhaps this explains why the global pass rate for most IT exams is a ghastly 40%. This is where the 101 Labs book series can help. We are revolutionizing how IT people train for their exams and the real world with our Learn - By - Doing teaching method. 101 Labs' mission is to turn you into an IT expert by doing instead of reading. Using free software and free trials, our experts take you by the hand and walk you through every aspect of the protocols and technologies you will encounter in your IT

career. We share our configuration tips and tricks with you as well as how to avoid the common mistakes many novice engineers make, which can quickly become career-ending. 101 Labs - CompTIA Network] This book is designed to help you pass the new N10-007 exam. It now features Performance-based questions (PBQs). These questions test your configuration and troubleshooting skills and add a new level of complexity to the exam. The only way to answer these types of questions is to have hands-on experience with the protocols and technology listed in the exam syllabus. The Network+ exam is probably the most useful exam in the IT industry. It equips you with all the necessary knowledge you need in order to work with other IT professionals and work in the IT industry. You learn TCP/IP, security, networking protocols and standards, best practices, subnetting and IP addressing, IPv6, troubleshooting tools and software, security, wireless, routing protocol basics, and much more. CompTIA presumes around 9-12 months of on-the-job experience for all of its exams, but of course, most of the students who take the exam don't have this. Even if they are working in IT roles, such as in helpdesk or server support, they will have been exposed to only a tiny number of the skills tested in the exam. Doing all the labs in this book will give you that experience. Please use the free resources at www.101labs.net/resources which will help you with the labs. About the Author Paul Browning left behind a career in law enforcement in 2000 and started an IT consulting and training company. He's written over 15 best selling IT books and through his books, classroom courses, and websites he's trained tens of thousands of people from all walks of life. He's spent the last 16 years dedicated to training and teaching IT students from all walks of life to pass their exams and enjoy a rewarding career.

"The first great rock 'n' roll novel in the English language." --The Times On Valentine's Day, 1989, Vina Apsara, a famous and much-loved singer, disappears in a devastating earthquake. Her lover, the singer Ormus Cama, cannot accept that he has lost her, and so begins his eternal quest to find her and bring her back. His journey takes him across the globe and through cities pulsating with the power of rock 'n' roll, to Bombay, London and New York. But around the star-crossed lover and his quest, the uncertain world itself is beginning to tremble and break. Cracks and tears are appearing in the very fabric of reality, and exposing the abyss beyond. And Ormus has to confront just how far he is willing to go for love. In this epic romance that stretches across whole lives, and even beyond death, Salman Rushdie's most accessible novel is also a vivid account of the intimate, flawed encounter between East and West, a remaking of the myth of Orpheus, and an exploration of the extremities of comedy, culture and desire. *The Ground Beneath Her Feet* is a gripping story that encapsulates the history, dreams and passions of the last half century as no other novel has done.

In the warring, neo-feudal society of this cross-genre novel for fans of Cormac McCarthy and William Gibson, the greatest treasure is a dose of tellurium—a magical drug administered by a spike through the brain. *Telluria* is set in the future, when a devastating holy war between Europe and Islam has succeeded in returning the world to the torpor and disorganization of the Middle Ages. Europe, China, and Russia have all broken up. The people of the world now live in an array of little nations that are like puzzle pieces, each cultivating its own ideology or identity, a neo-feudal world of fads and feuds, in which no one power dominates. What does, however, travel everywhere is the appetite for the special substance tellurium. A spike of tellurium, driven into the brain by an expert hand, offers a transforming experience of bliss; incorrectly administered, it means death. The fifty chapters of *Telluria* map out this brave new world from fifty different angles, as Vladimir Sorokin, always a virtuoso of the word, introduces us to, among many other figures, partisans and princes, peasants and party leaders, a new Knights Templar, a harem of phalluses, and a dog-headed poet and philosopher who feasts on carrion from the battlefield. The book is an immense and sumptuous tapestry of the word, carnivalesque and cruel, and Max Lawton, Sorokin's gifted translator, has captured it in an English that carries the charge of Cormac McCarthy and William Gibson.

In this book, a leading expert on Cisco routing offers in-depth coverage of four key intra-domain protocols -- RIP, IGRP, OSPF, and EIGRP. Unlike other books on Cisco protocols, Alex Zinin shows you exactly what's happening inside your routers when you use these protocols -- so you can maximize your control over them, and leverage their full power. Cisco IP Routing demystifies even the most complex internals of Cisco IP routing with clear explanations, extensive visuals, and many real-world examples, configurations, and network designs. The heart of the book is its coverage of dynamic routing, starting with theory and then moving to the practical details of effective configuration. Alex Zinin also presents in-depth coverage of controlling routing by altering update flow, redistribution, and policy routing. For all network administrators, other Cisco networking professionals, and anyone preparing for Cisco's top-of-the-line CCIE exam.

Vanuatu & New Caledonia Lonely Planet Published by the American Geophysical Union as part of the Antarctic Research Series, Volume 70. The Long-Term Ecological Research (LTER) Program was established in 1981 by the United States National Science Foundation in recognition

of the need to study ecological processes over time spans longer than those of most research grants. The LTER Network now consists of 18 sites that span a variety of ecosystem types in the continental United States, Alaska, Puerto Rico, and Antarctica. The addition of the Palmer LTER at Palmer Station, Antarctica in October 1990 extended the geographical and ecological range of the LTER Network and provided the opportunity to link physical and ecological processes in the northern and southern hemispheres. One criterion for establishment of a LTER site is the existence of historical data and observations that can provide a basis for guiding research programs. Thus, the intent of this volume is to bring together meteorological, hydrographical, biological and ecological observations made in the general area west of the Antarctic Peninsula and to discuss the processes underlying the observations. This compilation of available data and observations in conjunction with the present understanding of processes provides the foundation for long-term studies of the ecosystem in the western Antarctic Peninsula region.

The Branches Of The Vine series was created with the likeness of diversity in mind. No child should be left out because of their disability or special needs, neither should they be made to feel different from those around them in any negative way. The author Shanice Solan would like to bring awareness to children and parents who may encounter others with physical disabilities and or medical needs like the ones in this book's series. Some eat different from others, talk different from others, see, hear, play, walk, understand and move around different from others; But just like you and just like me, we have our own unique differences that make us who we are today. The Branches Of The Vine series dares you, to embrace that thing that makes you different. Be bold, wear that disability and or that special needs like it is the CAPE of your very own superhero.

TCP/IP for Everyone

Grotesque visionary Sir Jack Pitman has an

idea. Since most people are too lazy to travel from landmark to landmark, why not simplify things and create a new England on the Isle of Wight? Unfortunately, his idea is a huge success, and the resulting theme park threatens to supersede the original. Called England, England, it has all the elements of "Old England" in one convenient location. Wander into the new Sherwood Forest and you may spot Robin Hood and his now sexually ambiguous Merrie Men. Or take a stroll to see Stonehenge and Anne Hathaway's Cottage, enjoy a ploughman's lunch atop the White Cliffs of Dover, then pop over to see the Royals, now on contract to Sir Jack, in their scaled-down version of Buckingham Palace. Every detail has been considered: even the postcards come pre-stamped! Julian Barnes' first novel in six years is a ferociously funny examination of the search for authenticity and truth in a fabricated world.
