Published by the American Geophysical Union as part of the Antarctic Research Series, Volume 70. The Long-Term Ecological Research (LTER) Program was established in 1981 by the United States National Science Foundation in recognition of the need to study ecological processes over time spans longer than those of most research grants. The LTER Network now consists of 18 sites that span a variety of ecosystem types in the continental United States, Alaska, Puerto Rico, and Antarctica. The addition of the Palmer LTER at Palmer Station, Antarctica in October 1990 extended the geographical and ecological range of the LTER Network and provided the opportunity to link physical and ecological processes in the northern and southern hemispheres. One criterion for establishment of a LTER site

is the existence of historical data and observations that can provide a basis for guiding research programs. Thus, the intent of this volume is to bring together meteorological, hydrographical, biological and ecological observations made in the general area west of the Antarctic Peninsula and to discuss the processes underlying the observations. This compilation of available data and observations in conjunction with the present understanding of processes provides the foundation for long-term studies of the ecosystem in the western Antarctic Peninsula region.

Grotesque visionary Sir Jack Pitman has an idea. Since most people are too lazy to travel from landmark to landmark, why not simplify things and create a new England on the Isle of Wight?

Unfortunately, his idea is a huge success, and the resulting theme park threatens to supersede the original. Called England, England, it has all the elements of "Old England" in one convenient location. Wander into the new Sherwood Forest and you may spot Robin Hood and his now sexually ambiguous Merrie Men. Or take a stroll to see Stonehenge and Anne Hathaway's Cottage, enjoy a ploughman's lunch atop the White Cliffs of Dover, then pop over to see the Royals, now on contract to Sir Jack, in their scaled-down version of Buckingham Palace. Every detail has been considered: even the postcards come pre-stamped! Julian Barnes' first novel in six years is a ferociously funny examination of the search for authenticity and truth in a fabricated world.

This book gathers a collection of studies by leading scholars on the Tomb of the Priests of Amun (Bab el-Gasus), where the burials of 153 individuals who lived under the 21st Dynasty have been unearthed, revealing the largest undisturbed tomb ever found in Egypt. This is the first publication to present a coherent vision of this find, with papers addressing a variety of topics including: the reorganization of the Theban necropolis under the 21st Dynasty; the sociological significance of the burials, as well as the funerary goods associated with them; the history of the

collections that had been given away to foreign countries in 1893, including their reception and subsequent treatment in museums around the world and in Egypt; carpentry and decoration of anthropoid coffins, using non-invasive analysis of materials; and finally, diversity and meaning of coffin decoration. The volume releases the papers first presented at the international conference held at the Calouste Gulbenkian Foundation in Lisbon to celebrate the 125th Anniversary of the discovery of the Tomb.

Bonding Manual New York Review of Books

In the warring, neo-feudal society of this cross-genre novel for fans of Cormac McCarthy and William Gibson, the greatest treasure is a dose of tellurium—a magical drug administered by a spike through the brain. Telluria is set in the future, when a devastating holy war between Europe and Islam has succeeded in returning the world to the torpor and disorganization of the Middle Ages. Europe, China, and Russia have all broken up. The people of the world now live in an array of little nations that are like puzzle pieces, each cultivating its own ideology or identity, a neo-feudal world of fads and feuds, in which no one power dominates. What does, however, travel everywhere is the appetite for the special substance tellurium. A spike of tellurium, driven into the brain by an expert hand, offers a transforming experience of bliss; incorrectly administered, it means death. The fifty chapters of Telluria map out this brave new world from fifty different angles, as Vladimir Sorokin, always a virtuoso of the word, introduces us to, among many other figures, partisans and princes, peasants and party leaders, a new Knights Templar, a harem of phalluses, and a dog-headed poet and philosopher who feasts on carrion from the battlefield. The book is an immense and sumptuous tapestry of the word, carnivalesque and cruel, and Max Lawton, Sorokin's gifted translator, has captured it in an English that carries the charge of Cormac McCarthy and William Gibson.
