This highly anticipated print collection gathers articles published in the much-loved International Journal of Proof-of-Concept or Get The Fuck Out. PoC||GTFO follows in the tradition of Phrack and Uninformed by publishing on the subjects of offensive security research, reverse engineering, and file format internals. Until now, the journal has only been available online or printed and distributed for free at hacker conferences worldwide. Consistent with the journal's quirky, biblical style, this book comes with all the trimmings: a leatherette cover, ribbon bookmark, bible paper, and gilt-edged pages. The book features more than 80 technical essays from numerous famous hackers, authors of classics like "Reliable Code Execution on a Tamagotchi," "ELFs are Dorky, Elves are Cool," "Burning a Phone," "Forget Not the Humble Timing Attack," and "A Sermon on Hacker Privilege." Twenty-four full-color pages by Ange Albertini illustrate many of the clever tricks described in the text.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. *The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity* explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by *The Future of Nursing: Leading Change, Advancing Health* (2011) report.

This is the second edition of a reference work aimed at all those concerned with dealing with tuberculosis control in developing countries. The book follows in the tradition of Kurt Toman's original work in this field, with the text set out in a question and answer format, grouped under three headings: case detection; treatment, and monitoring. The threat of tuberculosis is still potent, with two million deaths globally. This new

edition, containing contributions from a number of experts in this field, addresses the resurgence of tuberculosis, and the emergence of multidrug-resistant bacilli, and the growth of HIV-infected individuals with tuberculosis, as well as recent scientific developments.

*Digital Design of Signal Processing Systems* discusses a spectrum of architectures and methods for effective implementation of algorithms in hardware (HW). Encompassing all facets of the subject this book includes conversion of algorithms from floating-point to fixed-point format, parallel architectures for basic computational blocks, Verilog Hardware Description Language (HDL), SystemVerilog and coding guidelines for synthesis. The book also covers system level design of Multi Processor System on Chip (MPSoC); a consideration of different design methodologies including Network on Chip (NoC) and Kahn Process Network (KPN) based connectivity among processing elements. A special emphasis is placed on implementing streaming applications like a digital communication system in HW. Several novel architectures for implementing commonly used algorithms in signal processing are also revealed. With a comprehensive coverage of topics the book provides an appropriate mix of examples to illustrate the design methodology. Key Features: A practical guide to designing efficient digital systems, covering the complete spectrum of digital design from a digital signal processing perspective Provides a full account of HW building blocks and their architectures, while also elaborating effective use of embedded computational resources such as multipliers, adders and memories in FPGAs Covers a system level architecture using NoC and KPN for streaming applications, giving examples of structuring MATLAB code and its easy mapping in HW for these applications Explains state machine based and Micro-Program architectures with comprehensive case studies for mapping complex applications The techniques and examples discussed in this book are used in the award winning products from the Center for Advanced Research in Engineering (CARE). Software Defined Radio, 10 Gigabit VoIP monitoring system and Digital Surveillance equipment has respectively won APICTA (Asia Pacific Information and Communication Alliance) awards in 2010 for their unique and effective designs.

Five hundred years ago, Martin Luther's Ninety-Five Theses caught Europe by storm and initiated the Reformation, which fundamentally transformed both the church and society. Yet by Luther's own estimation, his translation of the Bible into German was his crowning achievement. The Bible played an absolutely vital role in the lives, theology, and practice of the Protestant Reformers. In addition, the proliferation and diffusion of vernacular Bibles—grounded in the original languages, enabled by advancements in printing, and lauded by the theological principles of sola Scriptura and the priesthood of all believers—contributed to an ever-widening circle of Bible readers and listeners among the people they served. This collection of essays from the 2016 Wheaton Theology Conference—the 25th anniversary of the conference—brings together the reflections of church historians and theologians on the nature of the Bible as "the people's book." With care and insight, they explore the complex role of the Bible in the Reformation by considering matters of access, readership, and authority, as well as the Bible's place in the worship context, issues of theological interpretation, and the role of Scripture in creating both division and unity within Christianity. On the 500th anniversary of this significant event in the life of the church, these essays point not only to the crucial role of the Bible during the Reformation era but also its ongoing importance as "the people's book" today.
