So You Want to Hunt Ghosts is your key to successful investigative adventures. A Beginner's Guide to Paranormal Investigation Litres Picking up a camera that is 50 or more years old, understanding how it works, using it in the field and obtaining a set of unique photographs can be very rewarding. There are many how to books whether they are original camera manuals or photography technique books, but I found few books that help a

photographer get the most from using old and vintage cameras in today's world. I chose to use Purma cameras as they are a somewhat eccentric series of cameras, relatively easy to use and readily available at a reasonable price from auction sites, car boot fairs, Facebook Marketplace, etc. The shutter mechanism, lens and body are all simple and it is therefore usually possible to understand whether a Purma camera is usable upon first inspection. The only issue that photographers may need to navigate is the supply of 127 film. It is available from some film suppliers or sourced by adapting 120 film.

Excerpt from *Beginner's Guide to Photography: Showing How to Buy a Camera and How to Use It* It is quite impossible to write down anything definite with regard to the length of time for which the lens must be uncovered. If we had only one particular subject to photograph, and this subject were always

lighted by the same amount of daylight, it would be an easy matter to calculate the amount of exposure required with every diaphragm of a lens, provided that the necessary amount had been ascertained by experiment with but one of those diaphragms. For these stops or diaphragms, as furnished with modern lenses, have apertures bearing a definite relation to one another. As a general rule each diaphragm will require double the exposure needed for the next size larger. Or to put it in another way - suppose the smallest stop of a lens to require an exposure of 24. Seconds with a given subject, with the next size larger the exposure will be 12, then 6, then 3, then until we come to the full aperture of the lens, by which the picture can be taken in ofa second. But as a matter of fact, the exposure varies not only with the nature of the subject, but with the time of day, the time of year, and the state of the atmosphere. The old adage, *Experientia* can not be more aptly quoted than in connection with this question of exposure. About the Publisher
