This book is about the development, delivery, roll-out and sustainment of the electronic health records using Lean management principles. Included in the book will be a reason for action (change) that includes user dissatisfaction, increased operational and delivery expense, poor outcomes, lack of integration, and poor sustainment and optimization beyond deployment. The book will cover lean thinking in the requirements planning, designing, testing go-live, and sustainability phases of an EHR new installation, or optimization. Lean Thinking within the healthcare industry has been gaining some traction over the last decade. Organizations have started to see improvement in staff and physician engagement, quality outcomes, access to services, and cost. Unfortunately, these improvements have not been realized in the leveraging of the EHR to improve outcomes and lower healthcare costs. There is no existing book that covers this topic and there is a known need in the marketplace.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to

increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECide (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Medical Insurance is designed around the revenue cycle with each part of the book dedicated to a section of the cycle followed by case studies to apply the skills discussed in each section. The revenue cycle now follows the overall medical documentation and revenue cycle used in practice management/electronic health records environments and applications. Because of the mandate to the healthcare industry to adopt ICD-10-CM/PCS on October 1, 2015, you must work to gain expertise using this coding system. For this reason, ICD-10 is the diagnostic coding system taught and exemplified in Medical Insurance: A Revenue Cycle Process Approach.
