This volume describes culture media and solutions used in human ART; how they have been developed for in vitro human pre-implantation embryo development, the function and importance of the various components in media and solutions and how they interact, and how the systems in which these are used can influence outcomes. Chapters discuss inorganic solutes, energy substrates, amino acids, macromolecules, cytokines, growth factors, buffers, pH, osmolality, and the interaction of these parameters. The role of incubators and other physical factors are reviewed, along with the relevance and prospects of emerging technologies: morphokinetic analysis using time-lapse imaging and dynamic fluid incubation systems. Results of prospective randomized trials are emphasized to ascertain the added value of these techniques for selecting viable embryos. This comprehensive guide will be invaluable for embryologists, physicians and all personnel involved in the fluid products used in human ART seeking to optimize their successful use of these components.

Featuring brilliant art, engaging new case studies, and dynamic new teaching and learning resources, this 9th edition of Porth ' s Pathophysiology: Concepts of Altered Health States is captivating, accessible, and student-friendly while retaining the comprehensive, nursing-focused coverage that has made it a market leader. The book ' s unique emphasis on " concepts" of altered health states, as opposed to factual descriptions of diseases and disorders, helps students grasp both the physical and psychological aspects of altered health. Drawing on the expertise of new co-author Sheila Grossman, the Ninth Edition maintains its comprehensive depth, while paring down content where appropriate and replacing descriptive content with striking art. (Approximately 600 illustrations are new or have been re-rendered in a consistent modern style.) Also new to this edition are advanced 3D narrated animations that address the most clinically relevant and difficult to understand disorders, engaging unit-opening case studies that reinforce critical thinking and set the tone for the content to come, and a wide range of built-in study tools. Now, for the first time, Porth ' s Pathophysiology is supported by PrepU, an adaptive learning system that help students learn more, while giving instructors the data they need to monitor each student ' s progress, strengths, and weaknesses.

Pharmaceutical Calculations: A Conceptual Approach, is a book that combines conceptual and procedural understanding for students and will guide you to master prerequisite skills to carry out accurate compounding and dosage regimen calculations. It is a book that makes the connection between basic sciences and pharmacy. It describes the most important concepts in pharmaceutical sciences thoroughly, accurately and consistently through various commentaries and activities to make you a scientific thinker, and to help you succeed in college and licensure exams. Calculation of the error associated with a dose measurement can only be carried out after understanding the concept of accuracy versus precision in a measurement. Similarly, full appreciation of drug absorption and distribution to tissues can

only come about after understanding the process of transmembrane passive diffusion. Early understanding of these concepts will allow reinforcement and deeper comprehension of other related concepts taught in other courses. More weight is placed on the qualitative understanding of fundamental concepts, like tonicity vs osmotic pressure, diffusion vs osmosis, crystalloids vs colloids, osmotic diuretics vs plasma expanders, rate of change vs rate constants, drug accumulation vs drug fluctuation, loading dose vs maintenance dose, body surface area (BSA) vs body weight (BW) as methods to adjust dosages, and much more, before considering other quantitative problems. In one more significant innovation, the origin and physical significance of all final forms of critical equations is always described in detail, thus, allowing recognition of the real application and limitations of an equation. Specific strategies are explained step-by-step in more than 100 practice examples taken from the fields of compounding pharmacy, pharmaceuticals, pharmacokinetics, pharmacology and medicine.

This highly successful textbook is internationally renowned as a core text for trainee anaesthetists and is essential reading for candidates for the Fellowship of Royal College of Anaesthetists and similar examinations. The previous 6th edition was awarded First Prize at the BMJ Medical Book awards. The book provides full coverage of the sciences underpinning practice in anaesthesia, critical care and pain management together with details of clinical anaesthesia and perioperative care. In combining these aspects, anaesthetists new to the specialty have found the textbook particularly useful during the first few years of training as well as when preparing for professional examinations. It has also proved a valuable day-to-day reference for allied professionals such as operating department practitioners and physician assistants who need an understanding of clinical practice in anaesthesia and related specialties. The goal for this Seventh Edition has remained to equip the reader with the basic knowledge and practical considerations required to administer anaesthesia and perioperative care for a whole range of surgical conditions in patients with all common medical comorbidities. Reflecting the expanding role of anaesthesia beyond the operating theatre it also includes essential material related to safety and quality assurance, consent, resuscitation, intensive care medicine, pre-hospital care and chronic pain management. - This book's scope includes the full range of clinical practice, from anaesthetic equipment and pre-operative assessment through to post-operative care, local anaesthesia, anaesthesia for individual specialties and the management of chronic pain. - The text covers the principles of pharmacology, anaesthetic agents and physics for the anaesthetist. - This Seventh Edition has been restructured into four sections: Basic Sciences; Physics and Apparatus; Fundamentals of Anaesthesia and Perioperative Medicine; and Clinical Anaesthesia. - There are four new chapters reflecting the UK postgraduate anaesthetic examination syllabus and changes in clinical practice. There are: The older patient; Anaesthesia in low and middle-income areas; Management of critical incidents; and Data analysis, clinical trials and statistics. - Thirty new contributors provide a new perspective or contribute new chapters. - This edition makes extensive use of new line drawings and diagrams and, for the first time, many of these are available in colour. - Chapters have been extensively cross-referenced to aid the reader and avoid repetition to include substantially more information without increasing the overall size of the book. - The content of each chapter is closely aligned to the syllabus of the Primary FRCA examination. Sample online questions and answers are provided for each chapter and linked to the relevant part of each chapter.

Cellular and Molecular Physiology of Cell Volume Regulation Karger Medical and Scientific Publishers This work is a collection of short reviews on membranes and transport. It portrays the field as a mosaic of bright little pieces, which are interesting in themselves but gain full significance when viewed as a whole. Traditional boundaries are set aside and biochemists, biophysicists, physiologists, and cell biologists enter into a natural discourse. The principal motivation of this work was to ease the problems of communication that arose from the explosive growth and interdisciplinary character of membrane research. In these volumes we hope to provide a readily available comprehensive source of critical information covering many of the exciting, recent developments on the structure, biosynthesis, and function of biological membranes in microorganisms, animal cells, and plants. The 182 reviews contributed by leading authorities should enable experts to check up on recent developments in neighboring areas of research, allow teachers to organize material for membrane and transport courses, and give advanced students the opportunity to gain a broad view of the topic. Special attention was given to developments that are expected to open new areas of investigation. The result is a kaleidoscope of facts, viewpoints, theories, and techniques, which radiates the excitement of this important field. Publication of these status reports every few years should enable us to follow progress in an interesting and easygoing format. I am grateful to the authors, to Plenum Publishing Corporation, and to several of my colleagues for their thoughtful suggestions and enthusiastic cooperation, which made this work possible.
