This collection of essays focuses on both how and why assessment serves as a key element in the teaching and practice of technical and professional communication. The collection is organized to form a dual approach: on the one hand, it offers a landscape view of the activities involved in assessment - examining how it works at institutional, program, and classroom levels; on the other, it surveys the implications of using assessment for formulating, maintaining, and extending the teaching and practice of technical communication. The book offers teachers, students, scholars, and practitioners alike evidence of the increasingly valuable role of assessment in the field, as it supports and enriches our thinking and practice. No other volume has addressed the demands of and the expectations for assessment in technical communication.

Consequently, the book has two key goals. The first is to be as inclusive as is feasible for its size, demonstrating the global operation of assessment in the field. For this reason, descriptions of assessment practice lead to examinations of some key feature of the landscape captured by the term 'technical communication'. The second goal is to retain the public and cooperative approach that has characterized technical communication from the beginning. To achieve this, the book represents a 'conversation', with contributors chosen from among practicing, highly active technical communication teachers and scholars; and the chapters set up pairs of opening statement and following response. The overriding purpose of the volume, therefore, is to invite the whole community into the conversation about assessment in technical communication.

It aims to strike a balance between the free speech principle and the responsibilities of the individual, corporation, state, and the international community. This book brings a global perspective to the analysis of some of the most troubling uses of the Internet. It urges net users, ISPs, and liberal democracies to weigh freedom and security, finding the golden mean between unlimited license and moral responsibility. The Home Owner's Manual BoD — Books on Demand Does God speak? The answer seems clear. Books about the topic of hearing God's voice. And many believers testify to God's conversational guidance in their life: "God told me to help you." "I knew it was God speaking to me." Our culture reinforces the idea that speaking--constant speaking--is good and natural and essential. In those rare moments during a day when talking ceases or when we're alone, we quickly find some way to fill the void, whether turning on the television or radio, or calling someone on the phone. With others, and especially with God, we get the message: speaking is good, silence is bad. But still, Ruth Tucker is not afraid to ask the question, "Does God speak?" And her answer might surprise you. She urges caution in speaking about hearing God, pointing out that our privatized spirituality often sets those who hear God on a pedestal and leaves those who don't feeling spiritually inferior. Further, she shows how the expectation of conversation may too easily humanize God in our minds, causing us to approach God with the same attitude we have when we call a friend on the phone. And if God does speak, how can we be sure our own desires are not affecting our interpretation of God's voice? In God Talk Tucker offers us a new paradigm for viewing silence and prayer. Rather than feeling inferior when we don't hear God speak, she helps us lean more deeply on his silent, Spirit-inspired Word. By examining the Trinity, Tucker gives us a new glimpse of how God the Father spoke his words in the past, how Christ the Incarnate Word lived among us, and how the Holy Spirit speaks to us now through Scripture. Here is a probing, thought-provoking read on how our present, active, powerful God relates to us and how we, in turn, should relate to God.

Inhaltsangabe: Abstract: The evolution of computing and communication is on the fast track - its impact on work and life style is immense and carries with it vast social and economical implications for both individuals and enterprises. Advances in wireless and broadband technologies and trends such as pervasive networks, fixed-mobile convergence, seamless communication and sensor networks will have a broader impact and an even more profound influence on the way we live than the personal computer, PDA, cellular phone and Internet had from 1995-2005. Always on and ubiquity, the credos of today's ICT market, have already become customer demands. Under constrain to satisfy these demands, generate new service revenues, and retain higher percentages of existing customers worldwide, operating telecommunication companies have to break new ground. Personalization is considered a key differentiator in the increasingly competitive landscape. With the increasing proliferation of service types and features, a personal intelligent user interface will enable higher customer utility and also make new service scenarios possible. The main problem areas discussed in this thesis are technology forecast and usability evaluation of a new technology. Two well known quotations as follows will introduce the problem of technology forecasting. This 'telephone' has too many shortcomings to be seriously considered as a means of communication. The device is inherently of no value to us. A more contemporary the following statement by William Gates III from 1981: 640Kbyte ought to be enough for anybody. These statements might cause amazement, especially considering the fact that both companies are still in business. Admittedly, as the telephone replaced the telegraph, money transfer became the Western Union Telegraph Company's primary line of business. However, this begs the question how such companies were even capable of surviving such major misjudgements regarding their strategic technology alignment. Generally speaking, the only possible

strategies were changing the focus of their business (as was the case with Western Union), simply getting lucky or, alternatively, having enough money to assimilate the missing technology through purchases. But it can't be the goal of a global player to miss or lose millions and, in the case of a small firm, to go out of business simply because the chief executive or the person in charge misdiagnosed strategic technology [...]
