Mrs. Bullfrog is a short story by Nathaniel Hawthorne (born Nathaniel Hathorne; July 4, 1804 - May 19, 1864) was an American novelist and short story writer. He was born in 1804 in Salem, Massachusetts to Nathaniel Hathorne and the former Elizabeth Clarke Manning. His ancestors include John Hathorne, the only judge involved in the Salem

witch trials who never repented of his actions. Nathaniel later added a "w" to make his name "Hawthorne" in order to hide this relation. He entered Bowdoin College in 1821, was elected to Phi Beta Kappa in 1824, and graduated in 1825. Hawthorne published his first work, a novel titled Fanshawe, in 1828; he later tried to suppress it, feeling it was not equal to the standard of his later work. He published several short stories in various periodicals which he collected in 1837 as Twice-Told Tales. The next year, he became engaged to Sophia Peabody. He worked at a Custom House and joined Brook Farm, a

transcendentalist community, before marrying Peabody in 1842. The couple moved to The Old Manse in Concord, Massachusetts, later moving to Salem, the Berkshires, then to The Wayside in Concord. The Scarlet Letter was published in 1850, followed by a succession of other novels. A political appointment took Hawthorne and family to Europe before their return to The Wayside in 1860. Hawthorne died on May 19, 1864, and was survived by his wife and their three children. Much of Hawthorne's writing centers on New England, many works featuring moral allegories with a Puritan inspiration. His

fiction works are considered part of the Romantic movement and, more specifically, Dark romanticism. His themes often center on the inherent evil and sin of humanity, and his works often have moral messages and deep psychological complexity. His published works include novels, short stories, and a biography of his friend Franklin Pierce. Peace, Locomotion Wentworth Press

Apolonia "Lina" Flores is a sock enthusiast, a volleyball player, a science lover, and a girl who's just looking for answers. Even though her house is crammed full of books (her dad's a bibliophile), she's having trouble figuring out some very big questions, like why her dad seems to care about books more than her, why her best friend's divorced mom is obsessed with making cascarones (hollowed eggshells filled with colorful confetti), and, most of all, why her mom died last year. Like colors in cascarones, Lina's life is a rainbow of people, interests, and unexpected changes. In her first novel for young readers, Diana López creates a clever and honest story about a young Latina girl navigating growing pains in her South Texan city.

The Pentose

Phosphate Pathway

aims to explore the pentose phosphate

cycle and the

practical

techniques applied in its

investigation. The

main focus of the

book is the pentose phosphate cycle in

animals as well as

microorganisms, and does not discuss the one related to photosynthesis. The book covers the formulation of the pathway, its types, and its alternative formulations; the preparation, processes, and analysis of the pathway; and the enzymes involved. Also covered in the book are the intermediates in intact cells and tissues; distribution of enzymes among different tissues and species; the operation, regulation, and overall control of the pathway; and the clinical, nutritional, and metabolic aspects of the pathway. The text is recommended for biologists and biochemists who would like to understand further the pentose phosphate pathway and the processes related to it.

Developing Critical Reading Skills

Visible Ink Press Environmental Science: Sustaining Your World was created specifically for your high school environmental science course. With a central theme of sustainability included throughout, authors G. Tyler Miller and Scott Spoolman have focused content and included student activities on the core environmental issues of today while incorporating current research on solutions-based outcomes. National Geographic images and graphics support the text, while National Geographic Explorers and scientists who are working in the field to solve environmental issues of all kinds tell their stories of how real science and engineering practices are used to solve real-world environmental

problems. Ensure that your students learn critical thinking skills to evaluate all sides of environmental issues while gaining knowledge of the Core Ideas from the NGSS and applying that knowledge to real science and engineering practices and activities.
