CliffsNotes Biology Quick Review Second Edition McGraw Hill Professional

This Student Notebook and Study Guide, the ideal companion to Bruce Wingerd's *The Human Body*, reinvents the traditional study guide by giving students a tool to help grasp information in class and reinforce learning outside of class. Too often, students struggle to both learn the concepts presented and simultaneously record crucial information. The Student Notebook and Study Guide provides a structure for recording in-class material that parallels the text's concept presentation, and includes supplemental questions and activities for assignment outside of the classroom. A complete answer guide for both the in-class and out-of-class materials is

available online.

These articles were originally posted on the Learnerator blog and were compiled in no particular order. If you feel like you have no idea where to start when it comes to AP Biology prep, read this book to begin

understanding 21 key concepts for the AP Biology exam. Grab your copy today. Here is a preview of what is inside this book: Introduction Abiogenesis Anaerobic Respiration Animal Behavior Cell Organelles Diffusion & Osmosis Dissolved Oxygen DNA Replication Endocrine System Endosymbiosis Enzymes Hardy Weinberg Equation Heredity Immune Systems Kingdoms Krebs Cycle Lipids Mendelian Genetics Mitosis and Meiosis Nucleic Acids Scientific Method Transcription and Translation Conclusion An excerpt from the book: Anaerobic respiration is how cells make energy when, as you may have guessed from the name, there is no available oxygen. In fact, for this process there is neither oxygen nor mitochondria present. The two processes that allow this to work are those of glycolysis and fermentation. In cellular respiration, what we normally see is glucose breaks down to pyruvate and from this process we net 2 ATP. Next, the pyruvate will go into the mitochondria and enter the Krebs cycle. In the process of being converted to acetyl CoA, CO₂ is given off and another 2 ATP are made. This energy is stored in NADH and FADH₂. Their electrons move into the electron transport chain which will move to oxygen to transform the product to water. In this, 23-34 ATP are made.
