I see soil in a new light, and I wonder about my own lawn and garden. What have I sprinkled on my backyard? Is somebody using my home, my food, to recycle toxic waste? It seems unbelievable, outlandish -- but what if it's true? A riveting expose, *Fateful Harvest* tells the story of Patty Martin -- the mayor of a small Washington town called Quincy -- who discovers American industries are dumping toxic waste into farmers' fields and home gardens by labeling it "fertilizer." She becomes outraged at the failed crops, sick horses, and rare diseases in her town, as well as the threats to her children's health. Yet, when she blows the whistle on a nationwide problem, Patty Martin is nearly run out of town. Duff Wilson, whose Seattle Times series on this story was a finalist for the Pulitzer Prize, provides the definitive account of a new and alarming environmental scandal. *Fateful Harvest* is a

gripping study of corruption and courage, of recklessness and reckoning. It is a story that speaks to the greatest fears -- and ultimate hope -- in us all.

### *Plastic and Electronic Money*

Once we paid for things with bills, coins, or checks. Today we pay with zeroes and ones—digital entries on credit and debit cards, or electronic messages sent

over the Internet. In *Moving Money*, distinguished analysts explore this trend, its development and likely future, and the ramifications of this transformation. This is a book about money as a medium of exchange—in the past, in the present, but particularly in the future. What forms has money taken over the years? Moreover, how have those means of payment changed in recent years, and how will they develop in the future? And what (if anything) should policymakers do to facilitate those changes, or at least allow them to develop and mature? Brookings economists Robert E. Litan and Martin Neil Baily and a distinguished group of experts dissect these issues and peer into the future of consumer payments. The landscape of the consumer payments industry will be shaped at least in part by public policies. Historically, governments have had monopolies on the manufacture of money. Any form of payment clearly requires trust on the part of both the seller

and the buyer, and the government must establish and enforce laws to secure this relationship. More controversial is the issue of whether, and to what extent, government is also needed to protect the market in private sector payments systems. Why do these issues matter? The payments industry is a large and important sector of developed economies. In the United States, private-sector payments providers generate approximately \$280 billion a year in revenue, while the government invests substantial resources into making money (minting coins and printing bills) or moving it (via checks and various electronic transfers). And the way we pay for things influences our purchases—what we spend money on, how much we spend, and where we spend it. Thus the future of consumer payments is intertwined with the health of national economies. Contributors: Martin Neil Baily (Brookings), Thomas P. Brown (O'Melveny & Myers), Kenneth Chenault (American Express Company), Vijay D'Silva
