Dr. James W. Kalat's

BIOLOGICAL

PSYCHOLOGY is the

most widely used text in

---

the course area, and for good reason: an extremely high level of scholarship, clear and occasionally humorous writing style, and precise examples. Throughout all eleven editions, Kalat's goal has been to make biological psychology accessible to psychology students, not just to biology majors and pre-meds. Another goal has been to convey the excitement of the search for biological explanations of behavior, and Kalat delivers. Updated with new topics, examples, and recent research findings--and supported by new online bio-labs, part of the strongest media package yet--this text speaks to today's students and instructors. **Teacher's Handbook,  
Contextualized Language  
Instruction** Cengage

Learning

Many foreign language departments have developed innovative curricula with the goal of overcoming two-tiered structures that often separate language instruction at the lower levels from upper division content coursework. However, language

departments rarely extend their articulation efforts to include pre-collegiate experiences even though recent educational reforms have significantly altered not only the skill sets, but also needs and expectations of students entering college. In addition to attending to vertical interfaces, successful language curricula integrate horizontally with academic and professional units outside the language department. This volume furthers the existing knowledge base on the collegiate foreign language curriculum by providing a K-20 perspective on the achievement of curricular coherence. It is intended for a broad audience, but in particular language program directors, to help them address the critical transitions that language learners face during their progression from public schools through undergraduate programs and into graduate education.
