Discovering Psychology
Edward Elgar Publishing
This book highlights the importance of English academic vocabulary for success at university and explores written tasks as effective pedagogical tools to promote the acquisition of academic words. The book reviews germane and recent SLA, psycholinguistic, corpus linguistics, and L2 writing research to underscore the challenges associated with the

learning of academic words. Then, it reports on three empirical studies conducted in the Polish context. The first study develops a reliable tool to assess the knowledge of academic vocabulary of undergraduate learners. The second and third studies investigate the learning of academic words after the writing of sentences and argumentative essays, and discuss the role of cognition as a mediator of such learning. The book also provides an accessible introduction to linear mixed-effect models, a powerful, reliable, and flexible statistical technique that has been gaining popularity among SLA and psycholinguistics researchers. **Handbook of Social Influences in School Contexts** City of London College of Economics In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a

loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.

Now in its second edition, Teaching and Researching Language Learning Strategies: Self-Regulation in Context charts the field systematically and coherently for the benefit of language learning practitioners, students, and researchers. This volume carries on the author's tradition of linking theoretical insights with readability and practical utility and offers an enhanced Strategic Self-Regulation Model. It is enriched by many new features, such as the first-ever major content analysis of published learning strategy definitions, leading to a long-awaited, encompassing strategy

definition that, to a significant degree, brings order out of chaos in the strategy field. Rebecca L. Oxford provides an intensive discussion of self-regulation, agency, and related factors as the "soul of learning strategies." She ushers the strategy field into the twenty-first century with the first in-depth treatment of strategies and complexity theory. A major section is devoted to applications of learning strategies in all language skill areas and in grammar and vocabulary. The last chapter presents innovations for strategy instruction, such as ways to deepen and differentiate strategy instruction to meet individual needs; a useful, scenario-based emotion regulation questionnaire; insights on new research methods; and results of two strategy instruction meta-analyses. This revised edition includes in-depth questions, tasks, and projects for readers in every chapter. This is the ideal textbook for upper-level undergraduate and graduate courses in TESOL, ELT, education, linguistics, and psychology.

Kelli Sandman-Hurley talks the teacher or parent through why kids with dyslexia find spelling so hard, and what we can learn from the spelling mistakes in their writing samples. Introducing key terminology around morphemes (smallest unit of meaning in words) and phonemes (smallest contrastive units in language) in an accessible and clear way, Sandman-Hurley goes on to explain how we can identify, and learn from, kids' spelling miscues, and use them to further inform our teaching and instruction. Shedding much-needed light on an under-explored tool for classroom or home learning, Dyslexia and Spelling is essential reading for teachers and parents alike.

Handbook of Research on Educational Technology Integration and Active Learning Cengage Learning

Taking a dialogic approach, this edited book engages in analysis and description of dialogic discourse in a number of different educational contexts, from early childhood to tertiary, with an international team of contributors from Australia, Finland, New Zealand and the United Kingdom. The chapters focus mostly on dialogic face-to-face discourse, with some examples of online interactions, and feature insights from educational linguistics, particularly the work of Michael Halliday. While the contributors come from a range of theoretical backgrounds, they all share an interest in language in use and engage in close analysis of transcripts of naturally-occurring interaction. Taking inspiration from Alexander and other theorists, they employ a fine-grained and analytic approach to the exploration of their data. The authors make use of the linguistic tools and models of language in society, in order to examine the turn-by-turn unfolding of the interaction. The authors relate their insights from

disparate forms of linguistic analysis to elements of Alexander's (2020) dialogic framework, situating the discourse in its contexts and discussing the pedagogical implications of the linguistic choices at play. In presenting this work from a range of situations and perspectives, the authors strive to demonstrate how dialogic discourse plays out in educational contexts across the world. The book aims to foster further research in this direction and to inspire educators to explore dialogic discourse for themselves. It will be of interest to a wide audience, including literacy researchers, linguists, teachers and teacher educators, as well as graduate students. Modes and models of learning and instruction have shown a significant shift from yesterday's conventional learning and teaching given this era's current educational and social contexts. Learners are no longer learning and communicating with human-generated, computed, and mediated—or traditional—learning and instructional practices, paving the way for machine-facilitated communication, learning, and teaching tools. Learning and instruction, communication and information exchange, as well as gathering, coding, analyzing, and synthesizing data have proven to be in need of even more innovative technology-moderated tools. Applications of Machine Learning and Artificial Intelligence in Education focuses on the parameters of remote learning, machine learning, deep learning, and artificial intelligence under 21st-century learning and instructional contexts. Covering topics such as data coding and social networking technology, it is ideal for learners with an interest in the deep learning discipline, educators, educational technologists, instructional designers, and data evaluators, as well as special interest groups (SGIs) in the discipline.

The importance of higher education has never been clearer. Educational attainmentâ€"the number of years a person spends in schoolâ€"strongly predicts adult earnings, as well as health and civic engagement. Yet relative to other developed nations, educational attainment in the United States is lagging, with young Americans who heretofore led the world in completing postsecondary degrees now falling behind their global peers. As part of a broader national college completion agenda aimed at increasing college graduation rates, higher education researchers and policy makers are exploring the role of intrapersonal and interpersonal competencies in supporting student success. Supporting Students' College Success: The Role of Assessment of Intrapersonal and Interpersonal Competencies identifies 8 intrapersonal competencies (competencies involving self-management and positive self-evaluation) that can be developed through interventions and appear to be related to persistence and success in undergraduate education. The report calls for further research on the importance of these competencies for college success, reviews current assessments of them and establishes priorities for the use of current assessments, and outlines promising new approaches for improved assessments.
