In this guide, we will cover how to create user accounts, assign sudo privileges, and delete users on a CentOS 7 server. Adding Users. If you are signed in as the root user, you can create a new user at any time by typing: `adduser username`. If you are signed in as a non-root user who has been given sudo privileges, as demonstrated in the next section of this tutorial, you can add a new user by typing: `sudo adduser username`

CentOS 7 has a wide range of tools that can be used to configure and manage networking, from manually editing the network configuration file to using commands such as `ip`, `ifconfig`, `nmtui`, `nmcli` or `route`. The easiest utility a beginner can use to manage and change network configurations is `nmtui` graphical command line.

Initial Server Setup and Configurations on CentOS 7

As a Linux Distribution often used on servers, CentOS finds itself a bit of a niche choice for desktop users.

However, given its stable and thoroughly-tested base and access to confined Flatpak applications, the opportunities for use as a workstation are only confined by your imagination. However, with a relatively heavy desktop like GNOME being the default, you may want to install something ...

By default RHEL/CentOS 7 includes the day of the week in the log filename. This makes automating the user guide a bit more complicated so the `log_filename` is set to a constant. `pg-primary: /var/lib/pgsql/10/data/postgresql.conf ? Set log_filename. listen_addresses = '*'. log_filename = 'postgresql.log'.`
