The Triple Bind that girls face today: • Act sweet and nice • Be a star athlete and get straight A's • Seem sexy and hot even if you're not In many ways, today is the best time in history to be a girl: Opportunities for a girl's success are as unlimited as her dreams. Yet societal expectations, cultural trends, and conflicting messages are creating what psychologist and researcher Stephen Hinshaw calls "the Triple Bind." Girls are now expected to excel at "girl skills," achieve "boy goals," and be models of female perfection, 100 percent of the time. Here, Dr. Hinshaw reveals key aspects of the Triple Bind, including • genes, hormones, and the role of biology in confronting the Triple Bind • overscheduled lives and how the high pressure to excel at everything sets girls up for crisis • how traditionally feminine qualities (such as empathy and self-awareness) can put girls at risk for anxiety, depression, and other disorders • the oversexualization of little girls, preteens, and teenagers • the reasons girls are channeling pressure into violence Combining moving personal stories with extensive research, Dr. Hinshaw provides tools for parents who want to empower their daughters to deal in healthy ways with today's pressures.

Testing Static Random Access Memories covers testing of one of the important semiconductor memories types; it addresses testing of static

random access memories (SRAMs), both single-port and multi-port. It contributes to the technical knowledge needed by those involved in memory testing, engineers and researchers. The book begins with outlining the most popular SRAM architectures. Then, the description of realistic fault models, based on defect injection and SPICE simulation, are introduced. Thereafter, high quality and low cost test patterns, as well as test strategies for single-port, two-port and any p-port SRAMs are presented, together with some preliminary test results showing the importance of the new tests in reducing DPM level. The impact of the port restrictions (e.g., read-only ports) on the fault models, tests, and test strategies is also discussed. Features: -Fault primitive based analysis of memory faults, -A complete framework of and classification memory faults, -A systematic way to develop optimal and high quality memory test algorithms, -A systematic way to develop test patterns for any multi-port SRAM, -Challenges and trends in embedded memory testing.

This volume examines the prosecution as an institution and a function in a dozen international and hybrid criminal tribunals, from Nuremberg to the International Criminal Court. It is the result of a sustained collaborative effort among some twenty scholars and (former) tribunal staffers. The starting point is that the prosecution shapes a tribunal's practice and legacy more than any other organ and that a systematic examination of international prosecutors is therefore warranted. The chapters are organized chronologically, according to the successive phases of the life of the institution and the various stages of the trials. The analysis includes each institution's establishment, mandate and jurisdiction, as well as the prosecutorial framework and strategy, the prosecutor's external relations and the completion of the institution's work. The book also considers the prosecutors' independence and impartiality, and their accountability for their decisions. The volume thus provides a comprehensive picture of the mandate, organization, and operation of the prosecution in international criminal trials. As the first comprehensive study of an international legal actor whose decisions have widespread political repercussions, this book will be essential reading for all with an interest in international criminal justice.
