Climate refers to the average weather conditions in a place over many years (usually at least 30 years, to account for the range of natural variations from one year to the next). For example, the climate in Minneapolis is cold and snowy in the winter, while

Miami's climate is hot and humid.

Harari states that prior to AD 1500, technology had remained relatively stagnant. While minor advances were made, he argues that someone could fall asleep for 500 years and wake up in a relatively similar world. This changed, however, when leaders began to invest significantly in scientific research, realizing that it could yield better technology and thus more resources at their disposal.~~
