Winner of the prestigious Paul A. Samuelson
Award for scholarly writing on lifelong
financial security, John Cochrane's Asset
Pricing now appears in a revised edition that
unifies and brings the science of asset pricing
up to date for advanced students and
professionals. Cochrane traces the pricing of
all assets back to a single idea--price equals
expected discounted payoff--that captures the
macro-economic risks underlying each
security's value. By using a single, stochastic
discount factor rather than a separate set of
tricks for each asset class, Cochrane builds a
unified account of modern asset pricing. He
presents applications to stocks, bonds, and
options. Each model--consumption based,
CAPM, multifactor, term structure, and option
pricing--is derived as a different specification
of the discounted factor. The discount factor
framework also leads to a state-space geometry
for mean-variance frontiers and asset pricing
models. It puts payoffs in different states of
nature on the axes rather than mean and
variance of return, leading to a new and
conveniently linear geometrical representation
of asset pricing ideas. Cochrane approaches
empirical work with the Generalized Method
of Moments, which studies sample average
prices and discounted payoffs to determine
whether price does equal expected discounted
payoff. He translates between the discount
factor, GMM, and state-space language and the
beta, mean-variance, and regression language
common in empirical work and earlier theory.
The book also includes a review of recent
empirical work on return predictability, value
and other puzzles in the cross section, and
equity premium puzzles and their resolution.
Written to be a summary for academics and
professionals as well as a textbook, this book
condenses and advances recent scholarship in
financial economics.

During Reconstruction, former abolitionists in the North had a golden opportunity to pursue true racial justice and permanent reform in America. But after the sacrifice made by thousands of Union soldiers to arrive at this juncture, the moment soon slipped away, leaving many whites throughout the North and South more racist than before. Edward J. Blum takes a fresh look at the reasons for this failure in Reforging the White Republic, focusing on the vital role that religion played in reunifying northern and southern whites into a racially segregated society. A blend of history and social science, Reforging the White Republic offers a surprising perspective on the forces of religion as well as nationalism and imperialism at a critical point in American history.

In this much needed resource, Maryellen Weimer—one of the nation's most highly regarded authorities on effective college teaching—offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning. To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather

In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In Educating One and All, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"—the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. Educating One and All examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilities—and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.
