Are British research universities losing their way or are they finding a new way? Nigel Thrift, a well-known academic and a former Vice-Chancellor, explores recent changes in the British research university that threaten to erode the quality of these higher education institutions. He considers what a research university has now become by examining the quandaries that have arisen from a succession of misplaced strategies and false expectations. Challenging both higher education policy and leadership, he argues that the focus on student number growth and a series of research policy missteps has upset research universities' priorities just at a point in the history of planetary breakdown when their research is most needed.

"This book explores the different concepts of "a university" and the way they shape practice in Muslim contexts, with a particular focus on the Islamic republic of Pakistan. Higher education in Muslim contexts is often criticised for being incapable either of contributing to the socio-cultural and civilisational developments of society or of doing research and producing knowledge of a high standard. While the international organisations accuse universities of not helping the societies to become knowledgebased and to compete at the global level, some Muslim scholars call for the creation of "authentic Islamic" educational structures that would, as they think, solve the problems of higher education. In addition, since 9/11 some have been accusing Islam and its institutions, especially madrasas of being terrorist establishments. Yet, these criticisms fail to consider the diverse historical evolutions of social institutions, including those of higher education, and the way political, ideological and economic contexts have an impact on them. These claims and generalisations are often made without sufficient evidence from the grass root level or conducting in-depth qualitative or historical research on the subject."--Publisher's description.

This book offers a systematic introduction to recent achievements and development in research on the structure of finite non-simple groups, the theory of classes of groups and their applications. In particular, the related systematic theories are considered and some new approaches and research methods are described – e.g., the F-hypercenter of groups, X-permutable subgroups, subgroup functors, generalized supplementary subgroups, quasi-F-group, and F-cohypercenter for Fitting classes. At the end of each chapter, we provide relevant supplementary information and introduce readers to selected open problems.
