The euphoria evidenced in the aftermath of the collapse of communist regimes in the

late 1980s and early 1990s sometimes conveyed the impression that the process of democratization would be achieved without difficulty or tribulation. This book sets out to provide a thorough comparative analysis of the challenges which face the emerging democracies of Central and Eastern Europe and considers the impact of political change. Drawing heavily on available survey data, the book provides an in-depth account of how the new democracies of Central and Eastern Europe have coped with four major challenges: political fragmentation, nationalism, lack of respect for human rights, and poorly developed civil service systems. The book demonstrates that although the first few years of the 1990s were marked by increasing disenchantment with the new regimes, the change of governments as a direct result of the electoral process and the prospects for European integration have served to reverse this negative trend. Indeed, the authors find that the new political systems have managed to cope with the challenges so effectively that striking similarities with Western democracies are now apparent. Offering new insights into democratic transition, *Challenges to Democracy* will appeal to political scientists, diplomats and policymakers, and economists with an interest in European and comparative politics.

Food security will exist when all people, at all times, have physical and economic access to sufficient, safe and nutritious food to meet their dietary needs and food preferences for an active and healthy life (as stated in the Rome Declaration in 1996). Given the dimension of the current global food crisis, food security means adopting effective and specific actions at individual, household, national, regional and global levels. Food security invites us to reflect upon ethical principles like human equity, justice between current and future generations, respect for human dignity and sustainable food production. We strive to maintain our basic ethical convictions and engage in societal debates about other important values. While we do this, we may have to change our

ways of life and learn to create new priorities in the face of global responsibility. Science and technology are key tools to reach the Millennium Goals, providing both society and decision makers alike with relevant information and new options within an ethical framework. The contributions found in this publication bring together the perspectives of a diverse group of authors. Coming from the academic world, the public sector and non-governmental organisations (NGOs), they provide the latest views on 'Global food security: ethical and legal challenges'.
