Just as macroeconomic models describe the overall economy within a changing, or dynamic, framework, the models themselves change over time. In this text Stephen J. Turnovsky reviews in depth several early models as well as a representation of more recent models. They include traditional (backward-looking) models, linear rational expectations (future-looking) models, intertemporal optimization models, endogenous growth models, and continuous time stochastic models. The author uses examples from both closed and open economies. Whereas others commonly introduce models in a closed context, tacking on a brief discussion of the model in an open economy, Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field. This new edition has been extensively revised. It contains a new chapter on optimal monetary and fiscal policy, and the coverage of growth theory has been expanded substantially. The range of growth models considered has been extended, with particular attention devoted to transitional dynamics and nonscale growth. The book includes cutting-edge research and unpublished data, including much of the author's own work.

The book, Sustainability and Resources: Theoretical Issues in Dynamic Economics, presents a collection of mathematical models dealing with sustainability and resource management. The focus in Part A is on harvesting renewable resources, while Part B explores the optimal extraction of exhaustible resources. Part C introduces models dealing with uncertainty.

Some are descriptive models; others have deep roots in intertemporal welfare economics. The tools of dynamic optimization developed in the 1960s are used in a formal, rigorous presentation to address wide-ranging issues that have appeared in academic research as well as policy debates on the world stage. The book also provides a self-contained treatment that is accessible to advanced undergraduate and graduate students, who are interested in dynamic models of resource allocation and social welfare, resource management, and applications of optimization theory and methods of probability theory to economics. For researchers in dynamic economics, it will be an invaluable source for formal treatment of substantive macroeconomic issues raised by policymakers. The part dealing with uncertainty and random dynamical systems (largely developed by the author and his collaborators) exposes the reader to contemporary frontiers of research on stochastic processes with novel applications to economic problems.

In this short, hard-hitting volume, Roelf Haan critiques the assumptions that underlie our current economic system and makes the case for a truly biblical alternative. / The Economics of Honor walks through the Bible, from Genesis to Revelation, but it blazes an unfamiliar path. Through careful exegesis Haan draws economic insights from surprising passages and challenges conventional interpretations of some of Jesus' parables. Haan also draws insights from a wide-ranging number of thinkers, including John Calvin, Jacques Ellul, Ren Girard, Germaine Greer, and several Latin American liberation theologians. / A provocative and fascinating read, The Economics of Honor challenges accepted economic wisdom and exchanges it for groundbreaking, well-reasoned arguments on how the Bible would have us live today.

Principles in Health Economics and Policy, second edition, is a concise introduction to health economics and its application to health policy. It introduces the subject of economics, explains the fundamental failures in the market for healthcare, and discusses the concepts of equity and fairness when applied to health and healthcare. This new edition presents a globally-relevant,

policy-oriented approach, that emphasizes the application of economic analysis to universal health policy issues in an accessible manner. It explores four key questions currently facing health policy-makers across the globe: How should society intervene in the determinants that affect health? How should healthcare be financed? How should healthcare providers be paid? And, how should alternative healthcare programmes be evaluated when setting priorities? The book is an ideal guide to everyone interested in how the tools of health economics can be applied when shaping health policy.

Posing a major challenge to economic orthodoxy, Imperfect Knowledge Economics asserts that exact models of purposeful human behavior are beyond the reach of economic analysis. Roman Frydman and Michael Goldberg argue that the longstanding empirical failures of conventional economic models stem from their futile efforts to make exact predictions about the consequences of rational, self-interested behavior. Such predictions, based on mechanistic models of human behavior, disregard the importance of individual creativity and unforeseeable sociopolitical change. Scientific though these explanations may appear, they usually fail to predict how markets behave. And, the authors contend, recent behavioral models of the market are no less mechanistic than their conventional counterparts: they aim to generate exact predictions of "irrational"

human behavior. Frydman and Goldberg offer a long-overdue response to the shortcomings of conventional economic models. Drawing attention to the inherent limits of economists' knowledge, they introduce a new approach to economic analysis: Imperfect Knowledge Economics (IKE). IKE rejects exact quantitative predictions of individual decisions and market outcomes in favor of mathematical models that generate only qualitative predictions of economic change. Using the foreign exchange market as a testing ground for IKE, this book sheds new light on exchange-rate and risk-premium movements, which have confounded conventional models for decades. Offering a fresh way to think about markets and representing a potential turning point in economics, Imperfect Knowledge Economics will be essential reading for economists, policymakers, and professional investors.

Mateus and Moreira present a formidable review of pressing issues in competition law and economics. Top officials, judges and experts from Europe and North America offer their insights into analytical issues, practical problems for companies, enforcers and complainants and on the state of trans-Atlantic divergence and convergence. The discussion on national champions and state aid is prescient. Throughout, the analysis is acute, cutting edge, and deep. Officials, counsel and scholars will draw from this fabulous book for years to come. Philip Marsden, British Institute of International and Comparative Law, London, UK Competition policy is at a crossroads on both sides of the Atlantic. In this insightful book, judges, enforcers and academics in law and economics look at the consensus built so far and clarify controversies surrounding the issue. There is broad consensus on the fight against cartels, with some countries criminalizing this type of agreement. However there is also wide debate on the questions of monopolization and abuse of dominant position, vividly highlighted by the recent Microsoft case. Furthermore, there are today diverging views on the interplay of business strategies

and the control of market power on both a national and international scale. The book discusses the perennial issue in Europe of the conflicts between competition and industrial policies, once again bringing the theme of national champions to the fore. The contributing authors provide opinion on the efforts which have been made towards modernization in both the USA and the EU. Featuring new contributions by leading scholars and practitioners in antitrust, this book will be a great resource for antitrust enforcers, competition lawyers and practitioners and competition economists, as well as scholars and graduate students in antitrust and competition law.

Gross domestic product is arguably the best-known statistic in the contemporary world, and certainly amongst the most powerful. It drives government policy and sets priorities in a variety of vital social fields - from schooling to healthcare. Yet for perhaps the first time since it was invented in the 1930s, this popular icon of economic growth has come to be regarded by a wide range of people as a 'problem'. After all, does our quality of life really improve when our economy grows 2 or 3 per cent? Can we continue to sacrifice the environment to safeguard a vision of the world based on the illusion of infinite economic growth? Lorenzo Fioramonti takes apart the 'content' of GDP - what it measures, what it doesn't and why - and reveals the powerful political interests that have allowed it to dominate today's economies. In doing so, he demonstrates just how little relevance GDP has to moral principles such as equity, social justice and redistribution, and shows that an alternative is possible, as evinced by the 'de-growth' movement and initiatives such as transition towns. A startling insight into the politics of a number that has come to dominate our everyday lives.

"Many students who take introductory economics courses have difficulty seeing the relevance of the key concepts of opportunity cost, trade-offs, scarcity, and demand and supply to their lives and their careers. This reduces the willingness of many students to prepare for class and to be engaged during class. With this textbook, we show them how to apply economic thinking creatively to improve their work, their choices, and their daily lives. One of our main objectives in writing this textbook was to show that the fundamentals of economics are not just exciting but also alive with myriad personal applications"--

The historiography of African religions and religions in Africa presents a remarkable shift from the study of 'Africa as Object' to 'Africa as Subject', thus translating the subject from obscurity into the global community of the academic study of religion. This book presents a unique multidisciplinary exploration of African Traditions in the Study of Religion, Diaspora, and Gendered Societies. The book is structured under two main sections. The first provides insights into the interface between Religion and Society. The second features African Diaspora together with Youth and Gender which have not yet featured prominently in studies on religion in Africa. Contributors drawn from diverse African and global contexts situate current scholarly traditions of the study of African religions within the purview of academic encounter and exchanges with non-African scholars and non-African contexts. African scholars enrich the study of religions from their respective academic and methodological orientations. Jacob Kehinde Olupona stands out as a pioneer in the socio-scientific interpretation of African indigenous religion and religions in Africa and the new African Diaspora.
