America's rural areas have always held a disproportionate share of the nation's poorest populations. Rural Poverty in the United States examines why. What is it about the geography, demography, and history of rural communities that keeps them poor? In a comprehensive analysis that extends from the Civil War to the present, Rural Poverty in the United States looks at access to human and social capital; food security; healthcare and the environment; homelessness; gender

roles and relations; racial inequalities; and immigration trends to isolate the underlying causes of persistent rural poverty. Contributors to this volume incorporate approaches from multiple disciplines, including sociology, economics, demography, race and gender studies, public health, education, criminal justice, social welfare, and other social science fields. They take a hard look at current and past programs to alleviate rural poverty and use their failures to suggest alternatives that could improve the well-being of rural Americans for years to come. These essays work hard to define rural poverty's specific metrics and markers, a critical step for building better policy and practice. Considering gender, race, and immigration, the book appreciates the overlooked structural and institutional dimensions of ongoing rural poverty and

its larger social consequences.

"The traditional state model, based on a domestic approach to rule of law, is currently evolving towards a new one, where international factors and relations play a prominent role. This trend is also characterized by the pre-eminence of executive powers, along with a weakening of parliamentary balances and judicial controls. This work seeks to answer two essential questions concerning the rule of law: how can citizens challenge public decisions affecting them, and what kinds of public decisions can be judicially controlled. Two groups of legal

regulations are considered in this analysis: the so-called European legal tradition, covering nine national laws strongly influenced by Council of Europe legal standards since 1950, and the more recent body of European Union law. The authors conclude that the issue of individual guarantees vis-à-vis public powers should be carefully monitored in Europe."--

Democracies evolve. Their evolution is not only key to their survival; it is also a reflection of the changing environment in which they operate. This book contributes to the analysis and understanding of how democratic states have transformed over time by examining a number of challenges and opportunities that they face. With a focus on 'Europe 31', understood as the EU28 plus Switzerland, Norway, and Iceland, the book brings together separate strands of literature which often remain disconnected in political science narratives.

Looking at citizen – state relations, the restructuring of politics and institutions of the state, and developments which reach 'beyond and below' the state, it interrogates a variety of issues ranging from the decline of parties or the re-emergence of nationalism as a political force, to liberal challenges to social democracy, terrorist threats, and climate change. The book combines these different dimensions into a comprehensive overview of the state of contemporary democracy, its challenges and opportunities, and its dynamic capacity to adapt. In other words, it deals with the perpetual threats to and transformations of democracy, and the state's ability to protect and strengthen its democratic attributes. This text will be of key interest to scholars of European Politics, Comparative Politics, and Democracy Studies.

The substantially revised fourth edition of a widely used text, offering both an introduction to recursive methods and advanced material, mixing tools and sample applications.

Recursive methods provide powerful ways to pose and solve problems in dynamic macroeconomics.

Recursive Macroeconomic Theory offers both an introduction to recursive methods and more advanced material. Only practice in solving diverse problems fully conveys the advantages of the recursive approach, so the book provides many applications. This fourth edition features two new chapters and substantial revisions to other chapters that demonstrate the power of recursive methods. One new chapter applies the recursive approach to Ramsey taxation and sharply characterizes the time inconsistency of optimal policies. These insights are used in other chapters to simplify recursive formulations of Ramsey plans and credible government policies. The second new chapter explores the mechanics of matching models and identifies a common channel through which productivity shocks are magnified across a variety of matching models. Other chapters have been extended and refined. For example, there is new material on heterogeneous beliefs in both complete and

incomplete markets models; and there is a deeper account of forces that shape aggregate labor supply elasticities in lifecycle models. The book is suitable for first- and second-year graduate courses in macroeconomics. Most chapters conclude with exercises; many exercises and examples use Matlab or Python computer programming languages.

This work examines the experience of women providing care to children, disabled persons, the chronically ill, and the frail elderly. It differs from most writing about caregiving because it focuses on the providers rather than the care recipients. It looks at the

experience of women caregivers in specific settings, exploring what caregiving actually entails and what it means in their lives

Just as macroeconomic models describe the overall economy within a changing, or dynamic, framework, the models themselves change over time. In this text Stephen J. Turnovsky reviews in depth several early models as well as a representation of more recent models. They include traditional (backward-looking) models, linear rational expectations (future-looking) models, intertemporal optimization models, endogenous growth models, and continuous time stochastic models. The author uses examples from both closed and open economies. Whereas others commonly introduce models in a closed context, tacking on a brief discussion of the model in an open economy, Turnovsky integrates the two

---

perspectives throughout to reflect the increasingly international outlook of the field. This new edition has been extensively revised. It contains a new chapter on optimal monetary and fiscal policy, and the coverage of growth theory has been expanded substantially. The range of growth models considered has been extended, with particular attention devoted to transitional dynamics and nonscale growth. The book includes cutting-edge research and unpublished data, including much of the author's own work.

What determines the size and form of redistributive programs, the extent and type of public goods provision, the burden of taxation across alternative tax bases, the size of government deficits, and the stance of monetary policy during the course of business and electoral cycles? A large and rapidly growing literature in political economics attempts to answer these questions. But so far there is little consensus on the answers and disagreement on the appropriate mode of analysis. Combining the best of three separate traditions—the theory of macroeconomic policy,

public choice, and rational choice in political science—Torsten Persson and Guido Tabellini suggest a unified approach to the field. As in modern macroeconomics, individual citizens behave rationally, their preferences over economic outcomes inducing preferences over policy. As in public choice, the delegation of policy decisions to elected representatives may give rise to agency problems between voters and politicians. And, as in rational choice, political institutions shape the procedures for setting policy and electing politicians. The authors outline a common method of analysis, establish several new results, and identify the main outstanding problems.

This book addresses major issues facing postal and delivery services throughout the world. Worldwide, there is currently a considerable amount of interest in postal and delivery economics. The industry is in a state of near crisis

and drastic change is needed. The European Commission and member States are still wrestling with the problem of how to implement entry liberalization into postal markets, how to address digital competition, and how to maintain the universal service obligation (USO). The Postal Accountability and Enhancement Act of 2006 in the U.S. has perhaps created and exacerbated the problems faced by USPS. Post Offices (POs) have been slow to address the threat of electronic competition. On the other hand, e-commerce presents opportunities for POs to expand their presence in parcel delivery and perhaps help finance or redefine the USO. A major aim of this book is to address strategies POs can use to reinvent themselves for the digital age. This book compiles original essays by prominent researchers in the field, which will be selected and edited from papers presented at the 25th Conference on Postal and Delivery Economics held in Barcelona, Spain, May 24-27, 2017. That conference, and this

---

volume, commemorates the memory of Michael Crew who organized twenty-four prior conferences and co-edited previous conference volumes. This book is a useful tool not only for graduate students and professors, but also for postal administrations, consulting firms, and Federal Government departments.

In a decade that has seen the rise of far-right extremism, Western countries still face myriad threats of mass violence, including terrorism. Of particular concern is the phenomenon of "lone-wolf terrorism," whereby acts of political violence are committed by individuals who are operating independently of any organized terrorist group, something which makes them inherently more difficult to identify in advance of an attack. Now there is a need for research that profiles these perpetrators, explores the incidents that occur, and analyzes the shifting changes in mass violence, technology, and

terrorist behavior in modern times. *Mitigating Mass Violence and Managing Threats in Contemporary Society* explores the shifting definitions and implications of mass violence and covers important areas focused on the individuals who partake in these acts as well as weapon choice and the influence of weapon accessibility, how the attention-seeking behavior and promotion of violent actions is evolving, and how technology is used such as disseminating a manifesto prior to the incidents or using live streaming to broadcast incidents of mass violence as they transpire. The book also examines ways to prevent these incidents before they occur, which is a proven challenge with no single accurate profile for offenders, and whether perpetrators of mass violence share similar goals and motivations for their sprees, as well as commonalities in warning behaviors. This comprehensive research work is essential for law enforcement, military officials, defense

specialists, national security experts, criminologists, psychologists, government officials, policymakers, lawmakers, professionals, practitioners, academicians, students, and researchers working in the fields of conflict analysis and resolution, crisis management, law enforcement, mental health, education, psychology, sociology, criminology, criminal justice, terrorism, and other social sciences.

The main purpose of *Lectures on Macroeconomics* is to characterize and explain fluctuations in output, unemployment and movement in prices. *Lectures on Macroeconomics* provides the first comprehensive description and evaluation of macroeconomic theory in many years. While the authors' perspective is broad, they clearly state their assessment of what is important and what is not as they present the essence of macroeconomic theory today. The main purpose of *Lectures on Macroeconomics* is to characterize and explain fluctuations in output, unemployment and movement in prices. The most important fact of modern economic history is persistent long term

growth, but as the book makes clear, this growth is far from steady. The authors analyze and explore these fluctuations. Topics include consumption and investment; the Overlapping Generations Model; money; multiple equilibria, bubbles, and stability; the role of nominal rigidities; competitive equilibrium business cycles, nominal rigidities and economic fluctuations, goods, labor and credit markets; and monetary and fiscal policy issues. Each of chapters 2 through 9 discusses models appropriate to the topic. Chapter 10 then draws on the previous chapters, asks which models are the workhorses of macroeconomics, and sets the models out in convenient form. A concluding chapter analyzes the goals of economic policy, monetary policy, fiscal policy, and dynamic inconsistency. Written as a text for graduate students with some background in macroeconomics, statistics, and econometrics, *Lectures on Macroeconomics* also presents topics in a self contained way that makes it a suitable reference for professional economists.

Given how the coronavirus pandemic has rocked the economy, readers need a framework to make good financial decisions about their future, as well as support to psychologically handle the changing landscape. That's what Peter Neuwirth's six

foundational principles of *Holistic Financial Wellness* can provide. Specifically, this book will help people understand and deal with the complexity of the system, the uncertainty of the future, the hidden agendas and misguided views of many advisors, and the built-in irrationality we have as humans that makes it so hard to survive—let alone thrive financially. As you will soon see, Neuwirth's advice on how to structure your financial world in order to withstand the inevitable systemic collapses that the global economy was destined to experience could have saved the average reader tens (if not hundreds of thousands) of dollars, had they adopted these suggestions before Covid-19 arrived in this country. More than that, by using the six foundational principles of *Holistic Financial Wellness*, the attentive reader will now be prepared psychologically to weather the aftermath of this crisis, and be ready to face the next one. "Peter gives readers needed guidance for surviving a complex financial future. This book empowers readers to plan for the predictable, and to be prepared for the unpredictable—without losing sight of the trail." —Mike Kaplan, CEO, Rael & Letson "Pete's observations on how to ensure financial wellness over a lifetime are based on his deep knowledge of money and probability, complexity and change, and the quirks of human nature. how to navigate financially in an uncertain world." —Peter Cahall, Chief Executive Officer, CapAcuity

Gross domestic product is arguably the best-known statistic in the contemporary world, and certainly amongst the most powerful. It drives government policy and sets priorities in a variety of vital social fields - from schooling to healthcare. Yet for perhaps the first time since it was invented in the 1930s, this popular icon of economic growth has come to be regarded by a wide range of people as a 'problem'. After all, does our quality of life really improve when our economy grows 2 or 3 per cent? Can we continue to sacrifice the environment to safeguard a vision of the world based on the illusion of infinite economic growth? Lorenzo Fioramonti takes apart the 'content' of GDP - what it measures, what it doesn't and why - and reveals the powerful political interests that have allowed it to dominate today's economies. In doing so, he demonstrates just how little relevance GDP has to moral principles such as equity, social justice and redistribution, and shows that an alternative is possible, as evinced by the 'de-growth' movement and

initiatives such as transition towns. A startling insight into the politics of a number that has come to dominate our everyday lives.

Born a Crime Routledge  
This book explores policy, legal, and practice implications regarding the emerging field of disaster justice, using case studies of floods, bushfires, heatwaves, and earthquakes in Australia and Southern and South-east Asia. It reveals geographic locational and social disadvantage and structural inequities that lead to increased risk and vulnerability to disaster, and which impact ability to recover post-disaster. Written by multidisciplinary disaster researchers, the book addresses all stages of the disaster management cycle, demonstrating or recommending just approaches to preparation, response and recovery. It notably reveals how procedural, distributional and interactional aspects of justice enhance resilience, and offers a cutting edge analysis of disaster justice for managers, policy makers, researchers in justice, climate change or emergency management.

Trevor was born to a white Swiss father and a black Xhosa mother at a time when such a union was punishable by five years in prison. Living proof of his parents’ indiscretion, Trevor was kept mostly indoors for the earliest years of his life, bound by

the extreme and often absurd measures his mother took to hide him from a government that could, at any moment, steal him away. Finally liberated by the end of South Africa’s tyrannical white rule, Trevor and his mother set forth on a grand adventure, living openly and freely and embracing the opportunities won by a centuries-long struggle. *Born a Crime* is the story of a mischievous young boy who grows into a restless young man as he struggles to find himself in a world where he was never supposed to exist. It is also the story of that young man’s relationship with his fearless, rebellious, and fervently religious mother—his teammate, a woman determined to save her son from the cycle of poverty, violence, and abuse that would ultimately threaten her own life. The stories collected here are by turns hilarious, dramatic, and deeply affecting. Whether subsisting on caterpillars for dinner during hard times, being thrown from a moving car during an attempted kidnapping, or

just trying to survive the life-and-death pitfalls of dating in high school, Trevor illuminates his curious world with an incisive wit and unflinching honesty. His stories weave together to form a moving and searingly funny portrait of a boy making his way through a damaged world in a dangerous time, armed only with a keen sense of humor and a mother’s unconventional, unconditional love.
