Guide to Biochemistry provides a comprehensive account of the essential aspects of biochemistry. This book discusses a variety of topics, including biological molecules, enzymes, amino acids, nucleic acids, and eukaryotic cellular organizations. Organized into 19 chapters, this book begins with an overview of the construction of macromolecules from building-block molecules. This text then discusses the strengths of some weak acids and bases and explains the interaction of acids and bases involving the transfer of a proton from an acid to a base. Other chapters consider the effectiveness of enzymes, which can be appreciated through the comparison of spontaneous chemical reactions and enzyme-catalyzed reactions. This book discusses as well structure and function of lipids. The final chapter deals with the importance and applications of gene cloning in the fundamental biological research, which lies in the preparation of DNA fragments containing a specific gene. This book is a valuable resource for biochemists and students.

Whilst the coverage of this book is primarily photosynthesis in green plants, additional comparative material is included on bacteria and algae where photosynthesis takes place; the intention being to present a comprehensive and up-to-date overview. A brief description of the structure of plants, algae and bacteria which are able to carry out photosynthetic reactions is given as a necessary introduction to the detailed discussion of the reactions accompanying photosynthesis in all photosynthetic systems. The final chapter covers the biogenesis of chloroplasts which is a rapidly expanding researching area. The book is written for undergraduate students of biochemistry, biology and plant physiology. The authors have included references to research techniques through the text, but have not attempted to give definitive descriptions of these methods. Their aim is to encourage students to make the connection between experimental techniques and accepted knowledge, which they often study separately. A suggested reading list is provided at the end of each chapter to aid the more advanced student to further reading.

MEGA Study Guide for NTSE (SAT, MAT & LCT) Class 10 Stage 1 & 2 - 11th Edition McGraw-Hill/Glencoe

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an

evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom.
