This new book provides a comprehensive review of material covered in both the EMT-I and Paramedic national standard curricula. More than 1600 questions consist of multiple choice, fill-in-the-blank, and discussion questions. Fifty illustrations form the basis for certain questions within the book. Other

questions are written in a scenario-based format. This is the only review book to cover both intermediate and paramedic certification. Numerous scenario-based questions let students solve real-life problems. Questions are grouped by subject within each chapter, allowing students to test their knowledge of particular subjects without having to wade through unrelated questions. Comprehensive rationales help students understand why a particular answer is right or wrong; the rationales provide additional instruction and review. Answer sections are clearly marked with solid bars along the page margin, helping students find the answers quickly. A sample final exam covers information from all areas of the US DOT curriculum and prepares students for certification.

The overall goal of this calculus-based text is to provide an introduction to physics with a modern point of view. It emphasizes the atomic nature of matter, macro-micro connections, and modeling complex physical systems. The approach is designed to go beyond low-level physics and to build upon readers' prior preparation. The first volume deals with mechanics and thermal physics in a unified way, with strong emphasis on atomic-level description and analysis. The ball-and-spring model of solids is a major theme, culminating in computing the specific heat as a function of temperature for an Einstein solid, using the concepts of statistical mechanics.
