Theory of Unimolecular Reactions provides a comprehensive analysis of the theory of unimolecular reactions, also known to kineticists as the Rice-Marcus or the Rice-Ramsperger-Kassel-Marcus theory, and to those working in mass spectrometry and related fields as the quasi-equilibrium theory or the theory of mass spectra. This book demonstrates how theoretical parameters are related to experimental observables and describes the methods that are used to obtain useful numerical answers. This monograph consists of 11 chapters and begins by explaining the derivation of the expression for the basic rate $k(E)$, with emphasis on the unimolecular rate constant, intramolecular energy transfer, and potential energy surfaces in unimolecular reactions. The statistical calculation of unimolecular rate under vibrational potential is also given, along with pertinent degrees of freedom. The remaining chapters explore the energy distribution functions appropriate to each system, the averaging of $k(E)$, and the relations between theoretical and experimental parameters. Thermal reactions, chemical activation systems, and the theory of mass spectra are examined. The last chapter is devoted to the transition state and its ambiguities. This text will be of interest to gas kineticists, mass spectrometrists, and students and researchers working in the field of physical chemistry.

Joe McCarthy was headed towards a career as a plumber--until the parish priest intervened, and convinced McCarthy's mother that he could make more of himself in baseball. She relented, and Joseph Vincent McCarthy embarked on a career that ranks him among the greatest managers ever. In 24 years his teams took nine pennants, seven World Series titles, and never finished lower than fourth. This biography of Joe McCarthy details the 90-year life of one of the greatest managers in baseball's history. Baseball was McCarthy's ticket out of a working-class existence in Germantown, Pennsylvania, taking him to college, the minor leagues, managerial stints in baseball's backwaters, and on to remarkable years with the Yankees, Cubs and Red Sox--years filled with triumph and heartbreak. Seven championships and the highest managerial winning percentage ever earned

him entry to the Hall of Fame, but McCarthy will always be remembered for his deft handling of his players. McCarthy's ability to handle even "unmanageable" players won him the respect of all. His effect on the lives of his young charges was, in his mind, his greatest legacy.

Kant's discussion of the relations between cognition and self-consciousness lie at the heart of the Critique of Pure Reason, in the celebrated transcendental deduction. Although this section of Kant's masterpiece is widely believed to contain important insights into cognition and self-consciousness, it has long been viewed as unusually obscure. Many philosophers have tried to avoid the transcendental psychology that Kant employed. By contrast, Patricia Kitcher follows Kant's careful delineation of the necessary conditions for knowledge and his intricate argument that knowledge requires self-consciousness. She argues that far from being an exercise in armchair psychology, the thesis that

thinkers must be aware of the connections among their mental states offers an astute analysis of the requirements of rational thought. The book opens by situating Kant's theories in the then contemporary debates about "apperception," personal identity and the relations between object cognition and self-consciousness. After laying out Kant's argument that the distinctive kind of knowledge that humans have requires a unified self-consciousness, Kitcher considers the implications of his theory for current problems in the philosophy of mind. If Kant is right that rational cognition requires acts of thought that are at least implicitly conscious, then theories of consciousness face a second "hard problem" beyond the familiar difficulties with the qualities of sensations. How is conscious reasoning to be understood? Kitcher shows that current accounts of the self-ascription of belief have great trouble in explaining the case where subjects know their reasons for the belief. She presents a "new" Kantian approach to handling this problem. In this way, the book reveals Kant as a thinker of great relevance to contemporary philosophy, one whose allegedly obscure achievements provide solutions to problems that are still with us.

THIS SEARCHING INTERPRETATION of past and present addresses fundamental questions about the fall of the Roman Empire. Why did ancient culture, once so strong and rich, come to an end? Was it destroyed by weaknesses inherent in its nature? Or were mistakes made that could have been avoided -- was there a point at which Greco-Roman society took a wrong turn? And in what ways is modern society different? Western history is split into two discontinuous eras, Aldo Schiavone tells us: the ancient world was fundamentally different from the modern one. He locates the essential difference in a series of economic factors: a slave-based economy, relative lack of mechanization and technology, the dominance of agriculture over urban industry. Also crucial are aspects of the ancient mentality: disdain for manual work, a preference for transcending (rather than transforming) nature, a basic belief in the

permanence of limits. Schiavone's lively and provocative examination of the ancient world, "the eternal theater of history and power", offers a stimulating opportunity to view modern society in light of the experience of our forebears.

Studying the procedures used by competition institutions (dealing with

specific cases concerning monopolies, mergers, anti-competitive practices) this volumes uses a template to study practices of many national institutions and the EU, and examines the interactions among these and with prescriptions of influential international bodies. Together these form a web, with existing procedural rules and practices in a particular institution criticized and alternatives championed and transmitted partly by prescription and partly by arguments of major global law firms, of global corporations, and of consultants dispatched by the ICN and other agencies. This whole process, examined for the first time in this book, is the real global governance of the procedural law and practices of market supervision under competition rules. Delving deeply into their jurisdictions and internationally, the contributors illuminate the inner workings of the systems and expose the procedure, process, and performance norms embedded within. Case studies are drawn from Australia, Canada, Chile, China, Japan, South Africa, the USA, and the EU, as well as four leading international institutions involved in antitrust, the World Trade Organization, the Organization for Economic Cooperation and Development, the United Nations Conference on Trade and Development, and the International Competition Network. The results reveal a convergence of these norms across the very different systems, a procedural norms convergence that offers a necessary counterpart to studies on substantive rule convergence. These results provide benchmarks for the field, suggest possibilities for future development, and offer lessons for all interested in competition law and global governance.

Baruch: My Own Story is the memoirs of Bernard M.

Baruch, a man whose life spanned the late nineteenth century and over half of the twentieth century. Given the time period, he is a man who has seen much having met seven presidents, witnessing two wars and working on Wall Street for a time. In these memoirs, Baruch has tried to set forth the philosophy through which he had sought to harmonize a readiness to risk something new with precautions against repeating the errors of the past.
