Inhaltsangabe: Abstract: The purpose of this thesis is to discuss some important reasons for the recent boom

of Internet stocks, and to show and assess different methods to evaluate them. The Internet is a medium which is yet in the early days of its development and which will revolutionize communication habits, trade and leisure time behavior in an unseen manner. I will show this in the chapters 2 and

3 with psychological reasons for the recent boom. After that I present 3 typical Internet companies (Yahoo!, eBay, and Amazon.com) with their business content, financial data, and future outlook. Afterwards, the analyzing part of this thesis starts, and I demonstrate which figures an investor should

---

look at in order to have a broad overview about the investment. In chapter 5 I present some financial figures from both the income statement as well as the balance sheet, in chapter 6 I give a survey of ratios which are used from analysts and make some comments about how practical they are. Subsequently, chapter 7 deals with more traditional valuation methods, used by institutions like the Federal Bank of America. These are general methods in order to show whether markets are over-/ undervalued or not. After that, I present the valuation models used by investment banks: Economic Value Added (EVA, chapter 9), Discounted Cash Flow (DCF, chapter 10), Real options theory (chapter 11), and multiples (chapter 12). In the last part I summarize the outcome and give an outlook how Stock orders are based on expectations only.

This book is an introduction-

level text that reviews, discusses, and integrates both theoretical and practical corporate analysis and planning. The field can be divided into five parts: (1) Information and Methodology for Financial Analysis; (2) Alternative Finance Theories and Cost of Capital; (3) Capital Budgeting and Leasing Decisions; (4) Corporate Policies and their Interrelationships; (5) Financial Planning and Forecasting. The theories used and discussed in this

book can be grouped into the following classical theoretical areas of corporate finance: (1) Pre-M&M Theory, (2) M&M Theory, (3) CAPM, and (4) Option Pricing Theory (OPT). The interrelationships among these theories are carefully analyzed. Real world examples are used to enrich the learning experience; and alternative planning and forecasting models are used to show how the interdisciplinary approach can be used to make meaningful financial-management decisions. In

---

this third edition, we have extensively updated and expanded the topics of financial analysis, planning and forecasting. New chapters were added, and some chapters combined to present a holistic view of the subject and much of the data revised and updated.

Venture Capital & the Finance of Innovation World Scientific "Many interesting developments have occurred in the world of venture capital since the publication of the first edition of this book in 2006, which prompted us to revise the book for the second edition. While the organization

of the book remains unchanged, many of the chapters are substantially rewritten. For example, in Chapter 5, we re-ranked top VC firms, incorporating the latest performance statistics, fundraising and investment activities, notable exits, and (as always) our subjective opinions. In Chapter 6, we examine further evidence of the deepening globalization of the industry. In Chapters 3, 4, and 7, we analyze the impact of the 1999-2000 Internet bubble years on the VC risk and returns, as investments made in those years are finally mature

---

and thus now a part of the performance evaluation analysis. We also incorporated expositional improvements throughout the book based on reader feedback on the first edition. Another feature of the new edition is that the VCV model, used extensively in Part III of the book, is now available as a Web-based application available on <http://VCVtools.com>. Significant collaborative efforts went into developing this tool, which we believe will be of interest to a broad audience, including practitioners interested in valuing VC-

backed company stocks and employee stock options" [CFIN4 diplom.de](http://CFIN4.diplom.de)
