Benjamin Graham referred to it as his "margin of safety." Seth Klarman favors it over all other investment methods. Warren Buffett uses it to make millions for his investors. It's called value investing, and you can make it work wonders for your portfolio. All you need is money to invest, a little patience—and this book. Strategic Value Investing reveals everything you need to know to build a world-class portfolio using value investing as your north star. Written by experts on valuation and financial analysis, this comprehensive guide breaks it all down into an easy-to-implement process. The authors explain the ins and outs of determining when a stock is undervalued, then purchasing it and selling it for a profit when the rest of the world learns what you knew all along. With Strategic Value Investing, you'll learn how to: Distinguish between the various measures of value, including

going concern, replacement value, fair market value, book value, and intrinsic value Identify undervalued companies before everyone else, and know what to look for, what to avoid, when to buy, and when to sell The authors teach you how to establish a dispassionate value investing philosophy tailored to your needs. Equally important, they provide the tools you need to adhere to this often contrarian approach regardless of your emotions or crowd sentiment. Get in before the crowd—and get out when the price is right with Strategic Value Investing. Praise for Strategic Value Investing “ A book that has much the same character as a good value investor: calm, disciplined, with a grasp both of broad theory and of how to apply it. ” —JOHN AUTHERS, senior investment columnist, Financial Times “ This comprehensive look at valuation techniques is not only insightful, but can be easily put to use by individual and professional investors alike. ” —CHARLES ROTBLUT, CFA, Vice President, the American Association of Individual Investors “ Offers a sound fundamental perspective for those looking to deepen their analysis around stocks. A great resource for all types of value investors. ” —HEATHER BRILLIANT, CFA, global head of equity research at Morningstar and member of the CFA Institute Board of Governors “ This book is of Real Value! The General Theory of Employment, Interest, and Money, written by legendary author John Maynard Keynes is widely considered to be one of the top 100 greatest books of all time. This masterpiece was published right after the Great Depression. It sought to bring about a revolution, commonly referred to as the ‘ Keynesian Revolution ’, in the way economists thought—especially challenging the proposition that a market economy tends naturally to restore itself to full employment on its own. Regarded widely as the cornerstone of Keynesian thought, this book challenged the established classical economics and introduced new concepts. ‘ The General Theory of Employment, Interest, and Money ’ transformed economics and changed the face of modern macroeconomics. Keynes ’ argument is based on the idea that the level of employment is not determined by the price of labour, but by the spending of money. It gave way to an entirely new approach where employment, inflation and the market economy are concerned.

When business models collide with the real world, it’s often necessary to make rapid and decisive changes. Entrepreneurs call this pivoting — and it is not easy. Now, learn how to leverage design and learning skills to prepare for pivots, manage them effectively, and integrate them into a complete innovation framework that works! Business Model Execution - Navigating with the Pivot is part of Philadelphia University’s breakthrough approach to innovation: one that links business, design and engineering, and delivers extraordinary results in both new and existing ventures. First, Dr. Stephen Spinelli and Heather McGowan introduce this “Disrupt Together” approach, explain its deep roots in design thinking, and show how it generates far more high-value ideas for innovation. Next, David Charron drills down to focus specifically on the pivot. Charron covers pivoting at both key phases of the innovation process: the early search phase (before you’ve already made massive investments in your innovation or business model) and the execution phase (while these investments are already underway). You’ll systematically review why pivots often fail — and how to overcome the obstacles that cause them to fail. Business Model Execution - Navigating with the Pivot is one of 15 e-chapters addressing all facets of innovation, from design processes and team development to business models and value delivery. Each is crafted by a pioneering business innovator — and they all integrate into today’s most coherent, realistic blueprint for innovation. For all entrepreneurs, executives, managers, strategists, and students who want to drive more value from innovation. David Charron, Senior Fellow and Lecturer in Entrepreneurship at the Haas School of Business, teaches in its MBA, EW MBA, and executive programs. Berkeley’s NSF ICorps faculty lead, he has served as Executive Director of the Lester Center for Entrepreneurship and Innovation and of the Berkeley Innovative Leader Development initiative. An entrepreneur, investor, mentor, and consultant in Silicon Valley, he has spent 25 years focusing on technology commercialization and entrepreneurship with Stanford, MIT, Xerox PARC, and others. He holds a B.S. in Mechanical Engineering from Stanford and an MBA from Berkeley.

Winner of the prestigious Paul A. Samuelson Award for scholarly writing on lifelong financial security, John Cochrane’s Asset Pricing now appears in a revised edition that unifies and brings the science of asset pricing up to date for advanced students and professionals. Cochrane traces the pricing of all assets back to a single idea--price equals expected discounted payoff--that captures the macro-economic risks underlying each security’s value. By using a single, stochastic discount factor rather than a separate set of tricks for each asset class, Cochrane builds a unified account of modern asset pricing. He presents applications to stocks, bonds, and options. Each model--consumption based, CAPM, multifactor, term structure, and option pricing--is derived as a different specification of the discounted factor. The discount factor framework also leads to a state-space geometry for mean-variance frontiers and asset pricing models. It puts payoffs in different states of nature on the axes rather than mean and variance of return, leading to a new and conveniently linear geometrical representation of asset pricing ideas. Cochrane approaches empirical work with the Generalized Method of Moments, which studies sample average prices and discounted payoffs to determine whether price does equal expected discounted payoff. He translates between the discount factor, GMM, and state-space language and the beta, mean-variance, and regression language common in empirical work and earlier theory. The book also

includes a review of recent empirical work on return predictability, value and other puzzles in the cross section, and equity premium puzzles and their resolution. Written to be a summary for academics and professionals as well as a textbook, this book condenses and advances recent scholarship in financial economics.
