The Lymphatic System in Colorectal Cancer: Basic Concepts, Pathology, Imaging, and Treatment Perspectives provides an in-depth overview on the role of the lymphatic system in the pathogenesis and treatment of colorectal cancer. This is the first book to provide a comprehensive, multidisciplinary approach to the lymphatic system in colorectal cancer, with topics ranging from cancer biology and mathematical modeling to surgical approaches and novel imaging techniques. This book is valuable for cancer researchers, oncologists and anyone interested in the biology and treatment of colorectal cancer. Bringing together internationally renowned experts, the book's chapters encompass relevant content to help readers understand complex subjects. Lymphatic spread is one of the hallmarks of locally advanced colorectal cancer that adversely affects prognosis. Nevertheless, the molecular pathogenesis, dynamics and prognostic significance of lymphatic spread remain poorly understood. At the same time, novel surgical approaches such as complete mesocolic excision and sentinel node identification are being introduced, but their value remains uncertain. Presents a multidisciplinary approach, allowing readers to identify relevant fields of collaboration and inspire novel research endeavors in the field Discusses novel imaging techniques such as near-infrared that is being introduced in clinical practice as a tool for identifying sentinel nodes and lymphatic pathways Brings together international experts who shed light on the most relevant aspects of lymphatic spread in cancer of the bowel, underlying mechanisms, and the best method to avoid or treat it

"[This book] has been honed into an elegant compendium. This outstanding work should be widely read ñ it is perhaps the best example of an integrative approach to gerontology." Score: 94, 4 stars ñ Doody's "Physical Change & Aging has been a well-respected resource for caregivers ever since it was published in 1978. This updated version carries on the tradition of providing valuable information on the aging process and age-related health issues." ñ Former First Lady Mrs. Rosalynn Carter This sixth edition of a classic multidisciplinary text for students of gerontology continues to offer practical, reader-friendly information about the physical changes and common pathologies associated with the aging process. It places special emphasis on the psychological and social implications of these changes in the lives of older adults. The book is distinguished by its thorough focus on anatomy and physiology and common health problems pertaining to each body system. It emphasizes the positive aspects of aging and demonstrates how the elderly population can gain greater personal control, through lifestyle changes and preventive health strategies, toward the goal of optimal aging. This sixth edition has been thoroughly updated to present new research findings that differentiate "normal" aging from actual pathology and includes substantially

updated information on diagnosis and treatment. It incorporates new data from healthy older adults demonstrating that the aging process is not necessarily as devastating as earlier research had indicated. The book provides new data and guidelines on risk factors, nutrition, preventive measures, interventions, and commonly prescribed medications, and includes expanded treatment of complementary and alternative therapies. Also included is an updated discussion of grief, ethical issues, and funeral options. The book reinforces information with practical applications of aging data. Written for students of gerontology, social work, human services, nursing, medicine, occupational and physical therapy, counseling, and elder law, it presents information that is clearly understandable for those without an extensive background in biology or medicine. Additionally, the book is a useful practitioner's guide and an easily understandable book for family caregivers. THIS SIXTH EDITION INCLUDES NEW INFORMATION ON: Diagnosis and treatment Behaviors and interventions that promote more control over an individual's aging process Genetic/DNA theories Dementia and Parkinson's disease Immunotherapy Lifelong health disparities Animal-assisted therapy Prayer and meditation Pharmacogenetics Geragogy (self-directed learning) Caregiver health as a public health issue Natural funerals (biodegradable caskets, burial urns, dying at home)

This edition provides a complete guide to precision reflexology, covering the basic techniques and knowledge and now includes a new chapter on the latest advanced techniques which have developed in recent years by the author. Redesigned into a user friendly format. Photos have been updated throughout. This text is appropriate for those practitioners already using this technique and for those who have yet to discover it. Precision Reflexology holds the same rationale as other forms of reflexology. It focuses on stimulating "reflex points" on the feet to maintain good health. Precision work connects to a person energetically, responds to the needs of each individual and aims to maintain natural balance. It does not rely on physical pressure but, at the same time, it can be powerful and effective. It can be taught in its own right or it can be adapted to enhance other forms of reflexology in post-graduate training. It provides an added dimension to a treatment and reflects an Eastern approach to healthcare. This book offers a step-by-step guide, with illustrations and charts for its application.

Histopathology of Preclinical Toxicity Studies Elsevier Health Sciences

Histopathological assessment of tissue sections is an important component of many preclinical studies which are conducted to support the safety and clinical development of novel therapeutic agents for use in the treatment of human diseases. The drug discovery process, aided by modern biotechnology, is now capable of generating highly potent, pharmacologically active agents which can give rise to quite unusual constellations of tissue pathology. The complexity and the number of histopathological findings in individual studies indicate the need for lucidity in descriptions and conclusions. In the light of these and other difficulties, this text is aimed towards bringing together into one volume a description of histopathological changes which relate to toxicity testing of therapeutic agents in the usual test species: rat, mouse, dog and non-human primate. This book is an excellent starting point for the analysis of drug-induced findings in toxicity studies.
