This book delves into one of the greatest riddles perplexing modern science: ?Why are humans so smart?? In a format understandable even by the non-expert, the author investigates the origins of human intelligence, starting with classical Darwinian concepts. Thus, the strengths and beauty of natural selection are presented with many examples taken from natural history. Common criticisms of Darwin, from scientists and non-scientists alike, are confronted and shown to be either inconclusive or outright false. The author then launches into a discussion of human intelligence, the most important feature of human evolution, and how it cannot be fully explained by mutational selection. Modern humans are smarter than what is demanded by our evolutionary experience as hunter-gatherers. The difficulty lies in the inability of natural selection to answer the following question: how can a complex set of genes, controlling expensive traits with little immediate benefit, come into permanent existence within a short time period in every member of a small population (which was dispersed and geographically isolated over a huge planet) which had a low reproductive output and a low mutation rate? The book concludes with a speculative epigenetic theory of intelligence that does not require DNA mutations as a source of evolution. Although the book is comprehensible by anyone with a college education, this last section in particular should intrigue both layman and expert alike.

Biliteracy, or the development of reading, writing, speaking, listening, and thinking competencies in more than one language, is a complex and dynamic process. The process is even more challenging when the languages used in the literacy process differ in modality. Biliteracy development among deaf students involves the use of visual languages (i.e., sign languages) and auditory languages (spoken languages). Deaf students' sign language proficiency is strongly related to their literacy abilities. The distinction between bilingualism and multilingualism is critical to our understanding of the underserved, the linguistic deficit, and the underachievement of deaf and hard of hearing (D/HH) immigrant students, thus bringing the multilingual and immigrant aspect into the research on deaf education. Multilingual and immigrant students may face unique challenges in the course of their education. Hence, in the education of D/HH students, the intersection of issues such as biculturalism/multiculturalism, bilingualism/multilingualism, and immigration can create a dilemma for teachers and other stakeholders working with them. *Deaf Education and Challenges for Bilingual/Multilingual Students* is an essential reference book that provides knowledge, skills, and dispositions for teaching multicultural, multilingual, and immigrant deaf and hard of hearing students globally and identifies the challenges facing the inclusion needs of this population. This book fills a current gap in educational resources for teaching immigrant, multilingual, and multicultural deaf students in learning institutions all over the world. Covering topics such as universal design for learning, inclusion, literacy, and language acquisition, this text is crucial for classroom teachers of deaf or hard of hearing students, faculty in deaf education programs, language instructors, students, pre-service teachers, researchers, and academicians. *a tumblr book* IGI Global

The *Handbook of Research on the Impact of Culture in Conflict Prevention and Peacebuilding* is a critical publication that examines cultural differences in conflict resolution based on various aspects of culture such as morals, traditions, and laws. Highlighting a wide range of topics such as criminal justice, politics, and technological development, this book is essential for educators, social scientists, sociologists, political leaders, government officials, academicians, conflict resolution practitioners, world peace organizations, researchers, and students. **The Origin of Human Intelligence** IGI Global

This book outlines the process for organizational change from identifying a problem to following a strategy for success. Thomas Packard presents discussions on various methods such as team building, employee surveys, cultural change, organization redesign, and intrapreneurship. Case examples demonstrate how individuals can put theory into practice within their organizations. Written for current and future HSO leaders, this book delves into the tactics and change methods that will help guide individuals to enact change within their organizations. Packard has created an invaluable resource for HSO leaders who aspire to provide the best services and care for the clients and communities they serve. *Organizational Change for the Human Services* Cambridge Scholars Publishing

What is the Mediterranean? The perception of the Mediterranean leans equally on the nature, culture, history, lifestyle, and landscape. To approach the question of identity, it seems that we have to give importance to all of these. There is no Mediterranean identity, but Mediterranean identities. Mediterranean is not about the homogeneity and uniformity, but about the unity that comes from diversities, contacts, and interconnections. The book tends to embrace the environment, society, and culture of the Mediterranean in their multiple and unique interconnections over the millennia, contributing to the better understanding of the essential human-environmental interrelations. The choice of 17 chapters of the book, written by a number of prominent scholars, clearly shows the necessity of the interdisciplinary approach to the Mediterranean identity issues. The book stresses the most serious concerns of the Mediterranean today - threats to biodiversity, risks, and hazards - mostly the increasing wildfires and finally depletion of traditional Mediterranean practices and landscapes, as constituent parts of the Mediterranean heritage.

Consumer culture influences virtually all activities within modern societies and has become an important area of study for businesses. Logical analysis of consumer behavior is difficult as humans have different reasons for repeatedly buying products they need or want, and it is challenging to follow why they buy unneeded or unwanted products regularly. Without a comprehensive understanding of consumer culture as the basis, market discussions become empty and produce little insight into the power consumers hold in affecting other individuals and society. Multifaceted Explorations of Consumer Culture and Its Impact on Individuals and Society provides emerging research from different perspectives on the basis and ramifications of consumer culture, as well as how it affects all aspects of the lives of individuals. While providing a platform for exploring interpersonal interactions and issues related to ethics in marketing, readers will gain valuable insight into areas such as consumer vs. producer mentality, the effects of consumerism on developing countries, and the consequences of consumerism. This book is an important resource for marketing professionals, business managers, sociologists, students, academicians, researchers, and consumer professionals.

As the number of adjunct faculty teaching online courses remotely for their institutions continues to increase, so do the unique challenges they face, including issues of distance and isolation as well as problems pertaining to motivation, time, and compensation. Not only are these higher education faculty geographically isolated from each other and their colleagues at flagship campuses, but they also lack adequate institutional support and resources necessary to perform their roles. As institutions continue to rely heavily on this group of under-supported and undertrained instructors who teach the majority of online courses offered across the country, institutions need models and strategies to tap the expertise and perspectives of this group not only to improve teaching and learning in online programs but also to retain this critical talent pool. More consideration is needed to create institutional affinity and organizational commitment, build community, and create opportunities for remote adjunct faculty to be included as an integral component to their academic departments. The Handbook of Research on Inclusive Development for Remote Adjunct Faculty in Higher Education is a comprehensive reference work that presents research, theoretical frameworks, instructor perspectives, and program models that highlight effective strategies, innovative approaches, and unique considerations for creating professional development opportunities for remote adjunct faculty teaching online. This book provides concrete practices that foster inclusivity among contingent faculty teaching online as well as tangible practices that have been successfully implemented from faculty developers and academic leaders at institutions who have a large population of, and heavy reliance on, remote adjunct instructors. While addressing topics that include faculty engagement, mentoring programs, and instructor resources, this book intends to support remote instructors in the post-pandemic world. It is also beneficial for faculty development professionals; academic administrative leaders; higher education stakeholders; and higher education faculty, researchers, and students.

While the growth of computational thinking has brought new awareness to the importance of computing education, it has also created new challenges. Many educational initiatives focus solely on the programming aspects, such as variables, loops, conditionals, parallelism, operators, and data handling, divorcing computing from real-world contexts and applications. This decontextualization threatens to make learners believe that they do not need to learn computing, as they cannot envision a future in which they will need to use it, just as many see math and physics education as unnecessary. The Handbook of Research on Tools for Teaching Computational Thinking in P-12 Education is a cutting-edge research publication that examines the implementation of computational thinking into school curriculum in order to develop creative problem-solving skills and to build a computational identity which will allow for future STEM growth. Moreover, the book advocates for a new approach to computing education that argues that while learning about computing, young people should also have opportunities to create with computing, which will have a direct impact on their lives and their communities. Featuring a wide range of topics such as assessment, digital teaching, and educational robotics, this book is ideal for academicians, instructional designers, teachers, education professionals, administrators, researchers, and students.
