Consumer culture influences virtually all activities within modern societies and has become an important area of study for businesses. Logical analysis of consumer behavior is difficult as humans have different reasons for repeatedly buying products they need or want, and it is challenging to follow why they buy unneeded or unwanted products regularly. Without a comprehensive understanding of consumer culture as the basis, market discussions become empty and produce little insight into the power consumers hold in affecting other individuals and society. Multifaceted Explorations of Consumer Culture and Its Impact on Individuals and Society provides emerging research from different perspectives on the basis and ramifications of consumer culture, as well as how it affects all aspects of the lives of individuals. While providing a platform for exploring interpersonal interactions and issues related to ethics in marketing, readers will gain valuable insight into areas such as consumer vs. producer mentality, the effects of consumerism on developing countries, and the consequences of consumerism. This book is an important resource for marketing professionals, business managers, sociologists, students, academicians, researchers, and consumer professionals.

This book aims to present an overview of Chinese, Japanese and Korean modern management styles. The cultures of China, Japan and Korea are influenced by Confucianism, Daoism and Buddhism. As such, there are some basic similarities in their management styles. As business operations become more internationalised, the management styles among Chinese, Japanese and Korean companies have blurred the lines of distinction between Western and Eastern cultures. The need for Western managers to adapt to Asian way of doing business, and likewise for Asian companies to understand Western business practices, means that managers have to bridge the gaps and adopt the best management practices containing both Western and Eastern elements. Unlike the traditional approach of setting clear differentiation between Western and Eastern cultures, this book looks at Oriental management from a modern perspective, that is, the fusion of Western and Eastern management styles. By using a multifaceted approach to understanding modern Oriental management, the author stresses the complexities of the business environment in China, Japan and Korea. He suggests that Western theories of management are applicable to Eastern cultural context with some adaptations to the local environment. The author also offers valuable insights into the management styles of Oriental managers by providing a critical perspective of their thought processes in simple yet highly relevant illustrations of models and frameworks. This book is recommended for those who are interested in attaining a deeper knowledge of Oriental management practices.

As the number of adjunct faculty teaching online courses remotely for their institutions continues to increase, so do the unique challenges they face, including issues of distance and isolation as well as problems pertaining to motivation, time, and compensation. Not only are these higher education faculty geographically isolated from each other and their colleagues at flagship campuses, but they also lack adequate institutional support and resources necessary to perform their roles. As institutions continue to rely heavily on this group of under-supported and undertrained instructors who teach the majority of online courses offered across the country, institutions need models and strategies to tap the expertise and perspectives of this group not only to improve teaching and learning in online programs but also to retain this critical talent pool. More consideration is needed to create institutional affinity and organizational commitment, build community, and create opportunities for remote adjunct faculty to be included as an integral component to their academic departments. The Handbook of Research on Inclusive Development for Remote Adjunct Faculty in Higher Education is a comprehensive reference work that presents research, theoretical frameworks, instructor perspectives, and program models that highlight effective strategies, innovative approaches, and unique considerations for creating professional development opportunities for remote adjunct faculty teaching online. This book provides concrete practices that foster inclusivity among contingent faculty teaching online as well as tangible practices that have been successfully implemented from faculty developers and academic leaders at institutions who have a large population of, and heavy reliance on, remote adjunct instructors. While addressing topics that include faculty engagement, mentoring programs, and instructor resources, this book intends to support remote instructors in the post-pandemic world. It is also beneficial for faculty development professionals; academic administrative leaders; higher education stakeholders; and higher education faculty, researchers, and students.

Multifaceted Explorations of Consumer Culture and Its Impact on Individuals and Society Author House

This book delves into one of the greatest riddles perplexing modern science: ?Why are humans so smart?? In a format understandable even by the non-expert, the author investigates the origins of human intelligence, starting with classical Darwinian concepts. Thus, the strengths and beauty of natural selection are presented with many examples taken from natural history. Common criticisms of Darwin, from scientists and non-scientists alike, are confronted and shown to be either

inconclusive or outright false. The author then launches into a discussion of human intelligence, the most important feature of human evolution, and how it cannot be fully explained by mutational selection. Modern humans are smarter than what is demanded by our evolutionary experience as hunter-gatherers. The difficulty lies in the inability of natural selection to answer the following question: how can a complex set of genes, controlling expensive traits with little immediate benefit, come into permanent existence within a short time period in every member of a small population (which was dispersed and geographically isolated over a huge planet) which had a low reproductive output and a low mutation rate? The book concludes with a speculative epigenetic theory of intelligence that does not require DNA mutations as a source of evolution. Although the book is comprehensible by anyone with a college education, this last section in particular should intrigue both layman and expert alike.
