16–2 Evolution as Genetic Change Natural
selection acts on individuals. Evo-lution acts on
populations. Natural selec-tion acting on
individuals leads to the evolution of

populations. Natural selection on a trait
controlled by a single gene with two alleles can
cause one allele to increase and the other allele
to decrease. Natural selection on polygenic

16-2 Evolution as Genetic Change
A genetic view of
evolution offers a new way to look
at key evolutionary concepts
If each time an
organism reproduces, it passes
copies of its genes to its

offspring... We can therefore view evolutionary fitness as an organism's success in passing genes to the next generation We can also view an evolutionary adaptation as any genetically controlled physiological, anatomical, or behavioral trait ...
