The importance of export control laws and regulations in international trade continues to grow, not only because of the increase in world trade and technology dispersion, but also due to concerns surrounding national and regional stability and the risk of terrorism. Accordingly, familiarity with export control laws and regulations around the world has become extremely important for those involved in the international trade of dual-use or military goods, technology, and services. In this preeminent handbook, now in its third edition, two experienced professionals have gathered contributions from expert practitioners and academics. The third edition adds three new country chapters (Brazil, Israel, and Sweden) and a new separate chapter on sanctions and embargoes. In addition to chapters on the international regime in general, the book provides a practical overview of the export/import control regimes covering defence and dual-use goods and services in fourteen key jurisdictions. Country reports each follow the same structure for easy comparison. Issues and topics covered include the following and much more:

- import/export legal and regulatory requirements for controlled goods and services;
- sanctions for breach of such requirements (civil, administrative, or criminal);
- licence application processes;
- arms, dual-use and other products embargo (including chemical and biological materials and technology); and
- enforcement measures.

The Handbook also makes available, through an online application, all important standard export control -- related forms, templates, and other related documents, all of which readers can use to draft their own documents. The Handbook is invaluable to any professional (such as lawyers, compliance key players, procurement, logistics, finance and customs practitioners) working in relation to an organisation with a need to know the specific requirements to be followed for the efficient - and legally compliant - import or export of controlled military or dual-use goods, technologies or services.

Nutrition textbooks used by universities and colleges in developing countries have very often been written by scholars who live and work in North America or the United Kingdom. And while the research and information they present is sound, the nutrition-related health challenges with which developing countries must grapple differ considerably from those found in highly industrialized Western nations. The primary aim of Community Nutrition for Developing Countries is to provide a book that meets the needs of nutritionists and other health professionals living and working in developing countries. Written by both scholars and practitioners, the volume draws on their wealth of knowledge, experience, and understanding of nutrition in developing countries to provide nutrition professionals with all the information they require. Each chapter addresses a specific nutrition challenge currently faced by developing countries such as food security, food safety, disease prevention, maternal

health, and effective nutrition policy. In addition, the volume serves as an invaluable resource for those developing and implementing nutrition education programmes. With an emphasis on nutritional education as a means to prevent disease and effectively manage health disorders, it is the hope of the nearly three dozen contributors to this work that it will enhance the health and well-being of low-income populations throughout the world.

Two major events occurred in the early centuries of Islam that determined its historical and spiritual development in the centuries that followed: the formation of the sacred scriptures, namely the Qur'an and the Hadith, and the chronic violence that surrounded the succession of the Prophet, manifesting in repression, revolution, massacre, and civil war. This is the first book to evaluate the writing of Islam's major scriptural sources within the context of these bloody, brutal conflicts. Conducting a philological and historical study of little-known though significant ancient texts, Mohammad Ali Amir-Moezzi rebuilds a Shi'ite understanding of Islam's early history and the genesis of its holy scriptures. At the same time, he proposes a fresh interpretative framework and a new data set for theorizing the early history of Islam, isolating the contradictions between Shi'ite and Sunni sources and their contribution to the tensions that rile these groups today.

This book is dedicated to improving healthcare through reducing delays experienced by patients. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the "macro system." A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from

one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.
