Introductory Economics deals with the national economy as a whole—macroeconomics, in terms of inflation and unemployment. The book also discusses individual economic decision-makers—microeconomics, in view of the problems of scarcity and choice. Macroeconomics uses the market model of demand and supply as a tool to analyze the causes of, and present some cures for modern economic ailments. The text examines the economics of government fiscal policies with the framework of an aggregate demand and supply model. The book compares monetary policy and fiscal policy, explains the monetarist model of economic activity, and also investigates the roles of money, credit, interest rates. These economic activities have international consequences such as in trade, exchange rates, and on prevailing and future national economic policies. In microeconomics, the book focuses on the economics of exchange, the market mechanisms that increase the gains from trade, and the problems of choice facing consumers and producers in a competitive market. The text also tackles the problems found in resource markets (labor, natural resources, energy), in market failure, as well as analyzes the role of government. Economists, sociologists, students of economics or business, general readers interested in real-world economics, and policy makers involved in national economic development will find the book valuable.

You see how microeconomic forces impact daily events and form an important part of life 24/7. Current, everyday microeconomic examples and updated discussions and learning features illustrate many unexpected places economics can occur. You learn how supply and demand play out on a freeway, what a business cycle is, how a person pays for good weather and even why U-Haul rates are higher going from New York to Texas than from Texas to New York. Two new chapters examine health economics and economic research, including casual inference and machine learning. With MICROECONOMICS, 14E, you gain the economic tools, new thinking and theories to help you better understand the world around you. World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution,

says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
