This edited volume explores the various views on the origins of

tetrapods--amphibians, reptiles, birds, and mammals--views that agree or differ depending in part on how certain fossil animals are classified and which methodology is used for classification.

Eighteen chapters by an international group of paleontologists and neontologists here present current hypotheses, emphasizing the kinds of data needed to answer controversial questions, as well as the

variety of solutions that emerge from diferent analyses of the same data set. The book is arranged in five sections, each of which contains an overview essay that either describes the development of various schools of thought regarding the origin of the tetrapod group in question or critically summarizes the arguments presented in the section. The first section addresses the origins of tetrapods as a group, focusing on lobe-finned fishes and early tetrapods. Next is a section dealing with amphbians, followed by one on reptiles. The fourth section concerns avian origins, and the final section treats the origins and early diversification of mammals. With an overall goal of stimulating critical evaluation by the reader rather than providing unequivocal

answers, this volume will be of particular interest to vertebrate paleontologists, evolutionary morphologists, and ichthyological, herpetological, avian, and mammalian systematists.

Covering a period of about four centuries, this book demonstrates the economic and political components of the opium problem. As a mass product, opium was introduced in India and Indonesia by the Dutch in the 17th century. China suffered the most, but was also the first to get rid of the opium problem around 1950.

Origins of the Higher Groups of Tetrapods Butterworth-Heinemann

This in-depth treatise presents conclusive evidence for an extremely close relationship between ancient Egyptian religious beliefs and the Book of Revelation. Practically all characters, scenes and series of scenes found in Revelation have parallels in mainstream Egyptian sources, including the Book of the Dead, the Amduat, Book of Gates, Book of Aker, Books of the Heavens and others. Parallel characters include Egypt's Apophis as Revelation's Satan while

situations and activities in scenes include the judgment scene and singers by a lake of fire. Parallel sequences of scenes include those found in the 2nd to 12th Divisions of the Book of Gates and most of Revelation's Chapters 15-21. Allusions to the Book of Dead are common. Finally, a key conclusion: the entire structure of the Book of Revelation can be accounted for in the organization of text and paintings on the walls and ceilings of the tomb of Ramesses VI in Egypt's Valley of the Kings. Fully referenced to enable critical review. See revorigin.com

The phylontogenic theory proposes an original understanding of nose, sinus and midface formation and development by looking back in evolution for the first traces of the olfactory organ and then tracing its successive phyletic transformations to become part of the respiratory apparatus and finally the central point of human facial anatomy. Von Baer's, Darwin's, Haeckel's, Garstang's, Gould's and Buss' explorations of parallels between phylogeny and ontogeny help to trace the nose and midface story. The

paradigm of existing parallels between ontogeny and phylogeny proves useful both in seeking to understand the holoprosencephalic spectrum of facial malformations (which represent radically different pathways of facial development after the life's tape has been started to run again) and in formulating hypotheses on chordate to vertebrate evolution. The phylontogenic theory leads to new medical hypotheses on nose and sinus diseases and opens the field of evolution and development-based medicine.

The popular belief that a scientific understanding of reality is incompatible with a Christian one is simply wrong. Some Christian understandings of reality do conflict with some scientific understandings.

But a thoroughly rational Christian understanding of the origin and history of the universe will be informed by the best scientific theories and the "facts" founded on them. This book weaves a narrative of the origin and history of the universe from the perspective of contemporary science with a Christian understanding of God and of God's role in the origin and history of the universe. At the center of this integrated narrative is the view that God, who is pure, unbounded Love, is Creator: the zest for life in the universe comes from God, and God is the source of Truth, Beauty, and Goodness in the universe. God is amazed and delighted at what God-and-the-world has created; God is saddened by ways creatures have fallen short of pure, unbounded Love, Truth, Beauty, and Goodness; and God's pure, unbounded Love keeps on trying to persuade all creatures

toward Truth, Beauty, and Goodness.

Far off the coast of California looms a harsh rock known as the island of San Nicholas. Dolphins flash in the blue waters around it, sea otter play in the vast kep beds, and sea elephants loll on the stony beaches. Here, in the early 1800s, according to history, an Indian girl spent eighteen years alone, and this beautifully written novel is her story. It is a romantic adventure filled with drama and heartache, for not only was mere subsistence on so desolate a spot a near miracle, but Karana had to contend with the ferocious pack of wild dogs that had killed her younger brother, constantly guard against the Aleutian sea otter hunters, and maintain a precarious food supply. More than this, it is an adventure of the spirit that will haunt the reader long after the book has been put down. Karana's quiet courage, her Indian self-reliance and acceptance of fate, transform what to many would have been a devastating ordeal into an uplifting experience. From

loneliness and terror come strength and serenity in this Newbery Medal-winning classic.

Kalith : Origin of The King's Nine Springer Science & Business Media An eminent geneticist, veteran author, OMMG Series Editor, and noted archivist, Peter Harper presents a lively account of how our ideas and knowledge about human genetics have developed over the past century from the perspective of someone inside the field with a deep interest in its historical aspects. Dr. Harper has researched the history of genetics and has had personal contact with a host of key figures whose memories and experiences extend back 50 years, and he has interviewed and recorded conversations with many of these important geneticists. Thus, rather than being a conventional history, this book transmits the essence of the ideas and the people involved and how they interacted in advancing- and sometimes retarding- the field. From the origins of human genetics; through the contributions of Darwin, Mendel, and other giants; the

identification of the first human chromosome abnormalities; and up through the completion of the Human Genome project, this Short History is written in the author's characteristic clear and personal style, which appeals to geneticists and to all those interested in the story of human genetics.

No other radical historian has reached so many hearts and minds as Howard Zinn. It is rare that a historian of the Left has managed to retain as much credibility while refusing to let his academic mantle change his beautiful writing style from being anything but direct, forthright, and accessible. Whether his subject is war, race, politics, economic justice, or history itself, each of his works serves as a

reminder that to embrace one's subjectivity can mean embracing one's humanity, that heart and mind can speak with one voice. Here, in six sections, is the historian's own choice of his shorter essays on some of the most critical problems facing America throughout its history, and today.

The Cold War: a Very Short Introduction John Pippy

A Synopsis of the Bura Project The three major rationale for writing this book are primarily to: through the study of African language family groups trace the origin of the tribe to a more specific location rather than the diffused response of ?from the East?; secondly to investigate why and how the word ?Pabir/Babur? came on the scene referring to a separate ethnic group different or the same as the Bura and thirdly to document some of the vanishing Bura cultural practices and deeds. For example what their beliefs are, their marriage practices, local industries and what they do to pass time. It is my strong belief that the first objective is accomplished through our analysis and presentation of the Proto-Afro-asiatic linguistic family classification group and its subgroup the Proto-Chadic of which the Biu-Mandara forms a sub-branch. Through a systemic and vigorous study of the classification of the different

languages comprising this Proto Family of languages and its sub-branches we are able to assert that the Bura people were among many other ethnic groups part of a group whose origin can be traced to the Levant region of south west Asia and the Middle-East. They belong to the group that forms ?back to Africa migration?. This is because modern genetic studies of languages indicate that they're the only group that have traces of Y chromosome belonging to haplogroup R1b R-V88 in Africa but found mainly in Asia and Europe. After tracing the influences of the powerful Kanem (ca. 700-1376) and later Bornu-Kanem (1380-1893) empires around the Lake Chad region as well as the kingdom of Mandara (founded in about 1459, i.e. end of the 15th century), in what is today modern Cameroon on the inhabitants of the region, we conclude a chaotic period of migrations and wars, including trade in slaves. It is through this prism that we notice the emergence of the founder of the Woviri dynasty of Biu. Through his failure to win the Maiship of Bornu, he moved to Mandara and

then the Plateau of Biu with some of his followers or relatives. Being a student of History Abdulahi or who later became Yamta-ra-wala attempted to replicate what the Kanembu were able to do among the local people they conquered some centuries earlier; they created an ethnicity and language called Kanuri. Yamta-ra-wala succeeded somewhat, but wasn't able to completely conquer the Bura people and turn them in his new ethnic vision. Instead the Buras went to the hills to fight him the next day. The new breed he created he called ?Pabir? or Babur as the Hausa would call them. The myth of who Yamta-ra-wala is has for the present eclipsed historians and would probably continue for some time to come. As for the Bura (Most have down the hill-tops and mountains!) and the Pabir they have never been closer than today. Today for all practical purposes they are one and the same ethnic group, they've intermingled more than any two previously separated groups. Their vocabulary, phonology and cultural practices have fused into one in most instances.
