The Clinical Neuropsychology Study Guide and Board Review provides an easy to study volume with sample questions and recommended readings that are specifically designed to help individuals prepare for the ABCN written examination. In addition, this book can also be used as a teaching tool for graduate students and trainees at various levels. The book is divided into three sections: Section 1: Foundations of Clinical Neuropsychology; Section II: Fundamentals of Assessment; and Section III: Disorders and Conditions. The format is geared toward exam preparation and is much less dense than a typical textbook. Materials are provided in a concise, outlined manner, with liberal use of bullets, boxes, and illustrations/tables that allow readers to easily review and integrate information into their already established knowledge base. To augment the study guide, a recommended readings list at the end of each chapter provides references to more comprehensive materials considered important or seminal in each topic area.

"Deserves a spot next to Fast Food Nation and To Kill a Mockingbird in America's high school curriculums. To say it may save lives is self-evident." –New York Times Book Review (Editor's Choice) NEW YORK TIMES BESTSELLER • A BEST BOOK OF THE YEAR: San Francisco Chronicle, Christian Science Monitor, Kirkus, Winnipeg Free Press One of the decade's most original and masterfully reported books, *A Deadly Wandering* by Pulitzer Prize-winning New York Times journalist Matt Richtel interweaves the cutting-edge science of attention with the tensely plotted story of a mysterious car accident and its aftermath to answer some of the defining questions of our time: What is technology doing to us? Can our minds keep up with the pace of change? How can we find balance? On the last day of summer, an ordinary Utah college student named Reggie Shaw fatally struck two rocket scientists while texting and driving along a majestic stretch of highway bordering the Rocky Mountains. *A Deadly Wandering* follows Reggie from the moment of the tragedy, through the police investigation, the state's groundbreaking prosecution, and ultimately, Reggie's wrenching admission of responsibility. Richtel parallels Reggie's journey with leading-edge scientific findings on the impact technology has on our brains, showing how these devices play to our deepest social instincts. A propulsive read filled with surprising scientific detail, riveting narrative tension, and rare emotional depth, *A Deadly Wandering* is a book that can change—and save—lives.

Study Guide for Houston, Bee, Hatfield, and Rimm's Invitation to Psychology seeks to aid students in their study of psychology. Each chapter in the Study Guide corresponds to the chapter of the same number in Invitation to Psychology and is broken down into component sections: Learning Objectives, Key Terms, Study Questions, Optional Exercises, and Practice Quizzes. The topics covered in these chapters include the following: the definition of psychology; the psychological basis of behavior; sensation and perception; states of awareness; learning, memory, and cognition; motivation and emotion; abnormal psychology and social behavior. Proper use of the Study Guide will help students get the most from what could be their only formal course in psychology. To maximize their learning, all of the components of each chapter must be completed. While no single approach to learning is the best, many students benefit greatly from the use of a study guide.

This book is a comprehensive analysis of the definitions, concepts, and recent research on malingering, feigning, and other response biases in psychological injury/ forensic disability populations. It presents a new model of malingering and related biases, and develops a "diagnostic" system based on it that is applicable to PTSD, chronic pain, and TBI. Included are suggestions for effective practice and future research based on the literature reviews and the new systems, which are useful also because they can be used readily by psychiatrists as much as psychologists. In Malingering, Feigning, and Response Style Assessment in Psychiatric/Psychological Injury, Dr. Young ambitiously sets out to articulate and synthesize the polarities involved in the assessment of response styles in psychological disabilities, including PTSD, pain, and TBI. He does so thoroughly and very even-handedly, neither minimizing the degree that outright faking can be found in substantial numbers of examinees, nor disregarding the possibility that there can be causes for validity test failure other than malingering. He reviews the prior systems for classifying evidence of malingering, and proposes his own criteria for feigned PTSD. These are conservative and well-grounded in the prior literature. Finally, the book contains dozens of very recent references, giving testament to Dr. Young's immersion in the personal injury literature, as might be expected from his experience as founder

and Editor in Chief for Psychological Injury and the Law. Reviewer: Steve Rubenzer, Ph.D., ABPP Board Certified Forensic Psychologist

Abnormal Psychology, Study Guide Springer

This text continues to be one of the most current, authoritative overviews of the theories and research in psychopathology and intervention. Its widely praised scientific clinical approach blends the clinical and empirical/experimental as the authors examine each disorder from multiple perspectives. The text emphasizes different paradigms with a particular emphasis on the diathesis-stress paradigm as necessary for understanding most psychopathologies.

This book is an indispensable guide to how to write articles, choose journals, and deal with revisions or rejection. Each chapter is written by a highly experienced journal editor - people who have actually made decisions on manuscripts and publication, as well as being eminent in their respective scientific field and written many articles themselves. It showcases parts of articles, discusses journal submission, outlines the resubmission process, and highlights systemic issues. Clear instructions are given on writing an empirical article, literature reviews, titles and abstracts, introductions, theories, hypotheses, methods and data analysis. Each part of the process is laid out from presenting results, to mapping-out a discussion and writing for referees. The integral skills of revising papers and ensuring a high impact are taught in 'article writing 101'. Whilst less intuitive knowledge is provided concerning publishing strategies, references, online submission, review systems, open access and

ethical considerations.
