This book aims to present an overview of Chinese, Japanese and Korean modern management styles. The cultures of China, Japan and Korea are influenced by Confucianism, Daoism and Buddhism. As such, there are some basic similarities in their management styles. As business operations become more internationalised, the management styles among Chinese, Japanese and Korean companies have blurred the lines of distinction between Western and Eastern cultures. The need for Western managers to adapt to Asian way of doing business, and likewise for Asian companies to understand Western business practices, means that managers have to bridge the gaps and adopt the best management practices containing both Western and Eastern elements. Unlike the traditional approach of setting clear differentiation between Western and Eastern cultures, this book looks at Oriental management from a modern perspective, that is, the fusion of Western and Eastern management styles. By using a multifaceted approach to understanding modern Oriental management, the author stresses the complexities of the business environment in China, Japan and Korea. He suggests that Western theories of management are applicable to Eastern cultural context with some adaptations to the local environment. The author also offers valuable insights into the management styles of Oriental managers by providing a critical perspective of their thought processes in simple yet

highly relevant illustrations of models and frameworks. This book is recommended for those who are interested in attaining a deeper knowledge of Oriental management practices.

The East India Company at Home, 1757 – 1857 explores how empire in Asia shaped British country houses, their interiors and the lives of their residents. It includes chapters from researchers based in a wide range of settings such as archives and libraries, museums, heritage organisations, the community of family historians and universities. It moves beyond conventional academic narratives and makes an important contribution to ongoing debates around how empire impacted Britain. The volume focuses on the propertied families of the East India Company at the height of Company rule. From the Battle of Plassey in 1757 to the outbreak of the Indian Uprising in 1857, objects, people and wealth flowed to Britain from Asia. As men in Company service increasingly shifted their activities from trade to military expansion and political administration, a new population of civil servants, army officers, surveyors and surgeons journeyed to India to make their fortunes. These Company men and their families acquired wealth, tastes and identities in India, which travelled home with them to Britain. Their stories, the biographies of their Indian possessions and the narratives of the stately homes in Britain that came to house them, frame our explorations of imperial culture and its British legacies.

Focusing on the interconnection of tariff structure, international trade and welfare evaluation, the book investigates the characteristics of tariff structures of China and the U.S. in recent years and measures the impact of the Sino – U.S. trade friction that started in 2018. The first part of the book discusses levels and evolution trends of tariff systems of China and the U.S. from 2000 to 2014 and makes a comparison between the two countries' tariff structures. The second part centers on the Sino – U.S. trade friction in 2018, analyzing its development, overall impact on welfare, and relevant impact mechanisms. The author draws on the quantitative analysis method currently prevailing in the field of international trade, taking global value chains, intermediate goods, and variable markup into consideration.
