Including considerations of sustainability in universities' activities has long since become mainstream. However, there is still much to be done with regard to the full integration of sustainability thinking into science and engineering curricula. Among the problems that hinder progress in this field, the lack of sound information on how to actually implement it is prominent. Created in order to address this need, this book presents a wealth of information on innovative approaches, methods and tools that may be helpful in translating sustainability principles into practice.

Historians have become increasingly sensitive to social and cultural theory since the 1980s, yet the actual methods by which research is carried out in History have been largely taken for granted.

Research Methods for History encourages those researching the past to think creatively about the wide range of methods

currently in use, to understand how these methods are used and what historical insights they can provide. This updated new edition has been expanded to cover not only sources and methods that are well-established in History, such as archival research, but also those that have developed recently, such as the impact of digital history research. The themes of the different chapters have been selected to reflect new trends in the subject, including landscape studies, material culture and ethics. Every chapter presents new insights and perspectives and will open researchers' minds to the expanding possibilities of historical research.

We will be, sooner or later, not only handling personal computers but also multi-purpose cellular phones, complex personal digital assistants, devices that will be context-aware, and even wearable computers stitched to our clothes...we would like these personal systems to become transparent to the tasks they will be performing. In fact the best interface is an invisible one, one giving the user natural and fast access to the application he (or she) intends to be executed. The working group that organized this conference (the last of a long row!) tried to combine a powerful scientific program (with drastic refereeing) with an entertaining cultural program, so as to make your stay in Rome the most pleasant one all round: I do hope that this expectation becomes true. We believe that this edition, which for the first time takes place in a Southern European country, will strengthen this role, and that Rome, with its history and beautiful setting provides a very congenial atmosphere for this conference. The theme of INTERACT 2005 is Communicating Naturally with Computers.

The relationship between research, on the one hand, and policy/practice on the other hand, is complicated and collaboration between scholars in research on higher education (RHE) and institutional research (IR) practitioners is often lacking. This book marks a collaborative effort of a diverse range of South African RHE and IR scholars and asks the overarching questions: What do we know about the utilisation of South African research on higher education (SARHE) and its subset of research known as Institutional Research? How and by

whom is this research used? The book begins by looking at the historical underpinnings of SARHE and delineating the shape and size of this body of research. This is followed by a series of case studies on South African Higher Education institutions and governmental bodies, investigating how, when and by whom are research on higher education and institutional research used in the decision-making of these organisations. This book is the first of its kind in South Africa and sets out to lay the groundwork for further research into the use, uptake and utilisation of RHE and IR in this country.

This volume brings together both theoretical and case study based contributions to the implementation of the Sustainable Development Goals (SDGs) in Institutions of Higher Education (IHE), presenting an impactful combination of authors from both developing and developed countries. While most current publications addressing the SDGs and education focus on sustainable development in general and specific topics such as climate change or energy, this book attempts to accelerate the localisation of the SDGs by presenting opportunities and innovations offered in various universities and campuses regarding SDGs localisation. The book seeks to provide an important contribution to the global dialogue on IHE and the SDGs, and will be of interest to academics and researchers engaged in the SDGs and education, as well as government agencies and other interested stakeholders. The book focuses on curriculum and learning matters, research and development as well as community engagement. Case studies detail the integration of SDGs in academic and professional development, new approaches to implementing sustainability science instruction, improvements in teaching practices to enhance teacher competence, and responsible management education. Additional focus is placed on the alignment of the SDGs in higher education with the other goals, emphasizing technological innovation for improved human health and environmental management, and climate change policies and action plans. Interdisciplinary solutions for pressing environmental problems are also provided, making sure that no one is left behind in realising these global development goals.

This book profiles various cases that are emerging in addressing global challenges in the context of SDGs for society in the era of climate change and covers case studies of projects being undertaken to tackle biodiversity, food security, climate change, energy and water security. The book is written by 37 authors, and will appeal to various stakeholders including academics working within the identified thematic areas, policy planners, development agencies, governments and United Nations agencies. The adoption of the Sustainable Development Goals (SDGs) in 2015 ushered a new era in the global development agenda as the world transitioned from the Millennium Development Goals (MDGs). The new era of SDGs that are all-inclusive, unlike the MDGs with the focus now being on ensuring human success that is predicated on environmental protection. The year 2020 marked five years post the adoption of the SDGs with increased calls for stock-taking of progress made amid strong calls for a decade of action to accelerate the delivery of the SDGs by 2030. These calls have been louder now given the impact of the COVID-19 pandemic, which reset the global economy and increased intensity of extreme weather events across the world. Since climate change has emerged as one of the biggest threats to the achievement of the SDGs, there has been growing concerns on its impact on biodiversity loss and the extinction of some species. There are also concerns regarding increased food insecurity at the household level in some parts of the world, particularly in Asia and Africa. With the demand for climate change action on the increase, there have also been growing calls for the big carbon emitters

to drastically cut their emissions and invest in clean energy to save the planet by following development pathways making emissions stay under the 1.5°C increase in temperature.

This book explores ways in which creative research practice can be explicitly and mindfully geared to make a difference to the quality of social and ecological existence. It offers a range of examples of how different research methods can be employed (and re-tuned) with this intention. The book suggests that what Romm names "active" research involves using the research space responsibly to open up new avenues for thinking and acting on the part of those involved in the inquiry and wider stakeholders. The book includes a discussion of a range of epistemological, ontological, methodological and axiological positions (or paradigms) that can be embraced by inquirers implicitly or explicitly. It details the contours of an epistemology where knowing is recognized to be grounded in social relations, as a matter of ethics. While focusing on discussing the "transformative paradigm" and attendant view of research ethics, it considers

to what extent the borders between paradigms can be treated as being permeable in creative and active inquiries. Apart from considering options for enhancing responsible research practice during the process of inquiry (and reconsidering mixed-research designs) the book also considers options for responsible theorizing that is inspirational for pursuing goals of social and ecological justice.
