The manufacture and use of the powders of non-ferrous metals has been taking place for many years in what was previously Soviet Russia, and a huge amount of knowledge and experience has built up in that country over the last forty years or so. Although accounts of the topic have been published in the Russian language, no English language account has existed until now. Six prominent academics and industrialists from the Ukraine and Russia have produced this highly-detailed account which covers the classification, manufacturing methods, treatment and properties of the non-ferrous metals (aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, lead, tin, bismuth, noble metals and earth metals). The result is a formidable reference source for those in all aspects of the metal powder industry. * Covers the manufacturing methods, properties and importance of the following metals: aluminium, titanium, magnesium, copper, nickel, cobalt, zinc, cadmium, noble metals, rare earth metals, lead, tin and bismuth. * Expert Russian team of authors, all very experienced * English translation and update of book previously published in Russian.

This book provides a comprehensive guide to all three volumes of Karl Marx ' s ' Capital ' , with advice on further reading and points for further discussion. Recognizing the contemporary relevance of ' Capital ' in the midst of the current financial crisis, Kenneth Smith has produced an essential guide to Marx ' s ideas, particularly on the subject of the circulation of money-capital. This guide uniquely presents the three volumes of ' Capital ' in a different order of reading to that in which they were published, placing them instead in the order that Marx himself sometimes

recommended as a more user-friendly way of reading. Dr Smith also argues that for most of the twentieth century, the full development of the capitalist mode of production (CMP) has been undermined by the existence of a non-capitalist ' third world ' , which has caused the CMP to take on the form of what Marx called a highly developed mercantile system, rather than one characterized by an uninterrupted circuit of industrial capital of the kind he expected would develop. While the guide can be read as a book in its own right, it also contains detailed references to Volumes I – III so that students, seminars and discussion groups can easily make connections between Smith ' s explanations and the relevant parts of ' Capital ' .

Gaspar Stoquerus's treatise, De musica verballi (ca. 1570), is the only Renaissance treatise as yet discovered that is devoted entirely to the problem of text placement in vocal polyphony. Salient portions of Stoquerus's treatise were first discussed in 1961 by Edward E. Lowinsky, and a more detailed synthesis of Stoquerus's treatise is contained in one chapter of Don Harran's Word-Tone Relations in Musical Thought from Antiquity to the Seventeenth Century (1986). The present volume of Greek and Latin Music Theory offers the first critical edition of Stoquerus's entire treatise, preceded by an extensive introduction and accompanied by a translation and annotations facing the Latin text. Indexes of terms, names, and subjects are also included. The critical edition of the text provides a precise reading and comprehension of its contents, while the translation enables readers to examine more closely the contents of the entire treatise, especially Stoquerus's contextual arguments justifying his subject in general and his fifteen rules for text placement in particular. The introduction and annotations reveal Stoquerus's immersion in his historical milieu as a scholar, humanist, and pedagogue. As a pedagogue in particular, Stoquerus is deeply immersed in the scholastic method of argumentation and advances his thought with precision and logic, culminating in his closely reasoned set of fifteen rules for text placement and a simplification of the Guidonian method of solmization already in progress in Renaissance choir-instruction books. This volume offers the first critical edition of Stoquerus's entire treatise, the only Renaissance treatise as yet discovered that is devoted entirely to the problem of text placement in vocal polyphony. Also included are an extensive introduction, a translation and annotations facing the Latin text, and indexes of terms, names, and subjects.

In this cross-cultural, interdisciplinary study, John Hick draws upon major world religions, as well as biology, psychology, parapsychology, anthropology, and philosophy, to explore the mystery of death. He argues that scientific and philosophical objections to the idea of survival after death can be challenged, and he claims that human inadequacy in facing suffering supports the basic religious argument for immortality.

This book takes an extensive look at the many different types of users and cultures that comprise the popular social media platform Tumblr. Though it does not receive nearly as much attention as other social media such as Twitter or Facebook, Tumblr and its users have been hugely influential in creating and shifting popular culture, especially progressive youth culture, with the New York Times referring to 2014 as the dawning of the “age of Tumblr activism.” Perfect for those unfamiliar with the platform as well as those who grew up on it, this volume contains essays and artwork that span many different topics: fandom; platform structure and design; race, gender and sexuality, including queer and trans identities; aesthetics; disability and mental health; and social media privacy and ethics. An entire generation of young people that is now beginning to influence mass culture and politics came of age on Tumblr, and this volume is an indispensable guide to the many ways this platform works.

The fifth and final volume to establish the results claimed by the great Indian mathematician Srinivasa

Ramanujan in his "Notebooks" first published in 1957. Although each of the five volumes contains many deep results, the average depth in this volume is possibly greater than in the first four. There are several results on continued fractions - a subject that Ramanujan loved very much. It is the authors wish that this and previous volumes will serve as springboards for further investigations by mathematicians intrigued by Ramanujans remarkable ideas.

It is a commonplace that pollution knows no borders, and that environmental law must allow for cross-border implementation. The European Union specifies this principle in EC directives on integrated pollution prevention and control (IPPC), on environmental impact assessment (EIA), and on the control of major accident hazards involving dangerous substances (Seveso II). This is the first book to investigate from both empirical and normative perspectives the effectiveness of these directives at the national level. It provides by far the most extensive comparative analysis and evaluation of the industrial permitting and inspections, EIA, and major accident prevention in the EU. Offering an in-depth study of the transposition and implementation of EC environmental directives in eight EU member states (Denmark, France, Germany, Italy, the Netherlands, Spain, Sweden, and the United Kingdom), the author who has played a significant role in the formulation of environmental legislation and regulation at both the national (German) and EU levelsand¿provides a stable base for an assessment of the benefits and costs of the integrated approach to environmental protection. Among the factors considered are the following: key features of national constitutional, administraand-tive, and judicial systems which provide the framework for environand-mental regulations and their implementation in the eight countries under study; procedures and substantive requirements transposing the IPPC, EIA and Seveso II directives into national laws; and evaluation of national deficiencies and the extent of muddling through. The empirical part of Dr Bohne's analysis draws on 138 expert interviews with public and private actors, a survey of 178 public authorities, and document analyses of selected industrial permits and environmental impact statements. His comparative analysis of procedural, organizational, and substantive integration makes it possible to identify and compare national accomplishments in regulatory integration, and offers new insights into the effectiveness and limits of EC law. The study concludes with a discussion of the implications of the findings for European governance and better regulation after the enlargement of the EU. This thoroughly researched, rigorous, and insightful study will be of great interest and value to policymakers, regulators, business people, environmental NGOs, consultants, and lawyers, as well as to students of environmental policies and European governance.
