A new approach to the study of Russian history. Traditionally the history of Russia has been interpreted from the European standpoint, and has more often than not been based on European sources and methods. However, Edgar Knobloch takes a completely new and unconventional scholarly approach to the history of Russia. Using economic and legal analyses, archeology and the history of art,

as well as analogies with other countries and cultures, he charts the influence and traditions of the Eastern civilizations in Russian history-an element of exceptional importance that, until now, has been largely neglected by historians. This new treatment, which takes into full account the effect of Persian, Turkish, Byzantine and nomadic influences-rather than just the European-enables the author to elucidate and explain many controversial events and to draft a continuous line of development from the earliest past right down to our own times. 30 maps and diagrams.

This volume showcases important new research on World War II memory, both in the Soviet Union and in Russia today. Through an examination of war remembrance in its various forms—official histories, school textbooks, museums, monuments, literature, films, and Victory Day parades—chapters illustrate how the heroic narrative of the war was established in Soviet times and how it continues to shape war memorialization under Putin. This war narrative resonates with the Russian population due to decades of Soviet commemoration, which continued virtually uninterrupted into the post-Soviet period. Major themes of the volume include the use of World War II memory for political legitimation and patriotic mobilization; the striking continuities between Soviet and post-Soviet commemorative practices; the place of Holocaust memorialization in contemporary Russia; Putin's invocation of the war to bolster national pride and international prestige; and the relationship between individual memory and collective remembrance. Authored by an international group of distinguished specialists, this collection is ideal for scholars of Russia across a range of disciplines, including history, political science, sociology, and cultural studies.

This edited volume explores patriotism and the growing role of militarism in today's Russia. During the last 20-year period, there has been a consistent effort in Russia to consolidate the nation and to foster a sense of unity and common purpose. To this end, Russian authorities have activated various channels, from educational programmes and youth organizations to media and popular culture. With the conflict in Ukraine, the manipulation of public sentiments — feeling of pride and perception of threat — has become more systemic. The traditional view of Russia being Other for Europe has been replaced with a narrative of enmity. The West is portrayed as a threat to Russia's historical-cultural originality while Russia represents itself as a country encircled by enemies. On the other hand, these state-led projects mixing patriotism and militarism are perceived sceptically by the Russian society, especially the younger generations. This volume provides new insights into the evolution of enemy images in Russia and the ways in which societal actors perceive official projections of patriotism and

militarism in the Russian society. The contributors of the volume include several experts on Russian studies, contemporary history, political science, sociology, and media studies.

In this important study David Armstrong examines the impact of revolutionary states on the international system. These states have always posed major problems for the achievement of world order: revolution is often accompanied by international as well as civil conflict, while revolutionary doctrines have proven to be highly disruptive of the existing structure of international politics. Dr Armstrong asks whether revolutionary states are 'socialized' into adopting acceptable patterns of international behaviour or whether it is international society that is forced to change when these new states appear. He looks in detail at the French, American, and Russian revolutions and at several post-1945 revolutionary states; he also examines the relationship between revolutionary states and the principal ordering devices of international society: international law, diplomacy, and the balance of power. His book is a major contribution to international relations and an important development and application of the 'international society' concept.
