Defines the current status of research in the genetics, anatomy, and development of the nematode *C. elegans*, providing a detailed molecular explanation of how development is regulated and how the nervous system specifies varied aspects of behavior. Contains sections on the genome, development, neural networks and behavior, and life history and evolution. Appendices offer genetic nomenclature, a list of laboratory strain and allele designations, skeleton genetic maps, a list of characterized genes, a table of neurotransmitter assignments for specific neurons, and information on codon usage. Includes bandw photos. For researchers in worm studies, as well as the wider community of researchers in cell and molecular biology. Annotation copyrighted by Book News, Inc., Portland, OR

A first step in any drought management system is to monitor the state and the evolution of the drought. This study addresses the problem of nonexistent operational drought monitoring systems and presents a new methodology for monitoring the evolution and severity of drought with the new, Combined Drought Index (CDI). It is based on the fact that drought is a natural phenomenon created by a

combination of several factors, such as deficiency in rainfall amount, persistence of below average rainfall, temperature excess and soil moisture characteristics. By combining the factors in the preceding text, the CDI compares present conditions with multiyear average (normal) conditions for the same time period. The methodology was applied at selected locations of different climate zones in Kenya. The results were compared with available official records of drought events (impacts), showing a very good positive relationship between the two. An attempt to detect the long-term trends of drought events

using the CDI indicates that there is an increasing trend of drought events in the country, while the drought severity is not necessarily getting worse in all stations. The CDI method also revealed the possibility of drought early warning and drought-related climate change analysis in Kenya.

Real, current macroeconomic events connected to the theory The new fourth edition of Blanchard's respected Macroeconomics text has been substantially revised to account for the impact of the GFC on the Australasian Economy and the many issues it raises. Thus, in addition to a first discussion of the crisis in Chapter 1 and numerous boxes and discussions

throughout the book, we have brought forward the chapter on the GFC to Chapter 9.

Macroeconomics is the only intermediate resource with a truly Australasian focus, demonstrating economic ideas and issues with hundreds of local and international examples. This comprehensive resource presents an integrated view of macroeconomics, drawing on the implications of equilibrium conditions in three sets of markets: the goods market, the financial markets and the labour market.

This edited research monograph brings together contributions from computer scientists, biologists, and engineers who are engaged with the study of evolution and how it may be applied to solve real-world problems. It also serves as a Festschrift dedicated to Erik D. Goodman, the founding director of the BEACON Center for the Study of Evolution in Action, a pioneering NSF Science and Technology Center headquartered at Michigan State University. The contributing authors are leading experts associated with the center, and they serve in top research and industrial establishments across the US and worldwide. Part I summarizes the history of the BEACON Center, with refreshingly personal chapters that describe Erik's working and leadership style, and others that discuss the development and successes of the center

in the context of research funding, projects, and careers. The chapters in Part II deal with the evolution of genomes and evolvability. The contributions in Part III discuss the evolution of behavior and intelligence. Those in Part IV concentrate on the evolution of communities and collective dynamics. The chapters in Part V discuss selected evolutionary computing applications in domains such as arts and science, automated program repair, cybersecurity, mechatronics, and genomic prediction. Part VI deals with evolution in the classroom, using creativity in research, and responsible conduct in research training. The book concludes with a special chapter from Erik Goodman, a short biography that concentrates on his personal positive influences and experiences throughout his long career in academia and industry.

An authoritative exploration of why

understanding evolution is crucial to human life today. It is easy to think of evolution as something that happened long ago, or that occurs only in "nature," or that is so slow that its ongoing impact is virtually nonexistent when viewed from the perspective of a single human lifetime. But we now know that when natural selection is strong, evolutionary change can be very rapid. In this book, some of the world's leading scientists explore the implications of this reality for human life and society. With some twenty-three essays, this volume provides authoritative yet accessible explorations of why understanding evolution is crucial to human life—from dealing with climate change and ensuring our food supply, health, and economic survival to developing a richer and more accurate comprehension of society, culture, and even what it means to be human itself.

Combining new essays with essays revised and updated from the acclaimed Princeton Guide to Evolution, this collection addresses the role of evolution in aging, cognition, cooperation, religion, the media, engineering, computer science, and many other areas. The result is a compelling and important book about how evolution matters to humans today. The contributors are Dan I. Andersson, Francisco J. Ayala, Amy Cavanaugh, Cameron R. Currie, Dieter Ebert, Andrew D. Ellington, Elizabeth Hannon, John Hawks, Paul Keim, Richard E. Lenski, Tim Lewens, Jonathan B. Losos, Virpi Lummaa, Jacob A. Moorad, Craig Moritz, Martha M. Muñoz, Mark Pagel, Talima Pearson, Robert T. Pennock, Daniel E. L. Promislow, Erik M. Quandt, David C. Queller, Robert C. Richardson, Eugenie C. Scott, H. Bradley Shaffer, Joan E. Strassmann, Alan R.

Templeton, Paul E. Turner, and Carl Zimmer. Guitars from George and Leo John Wiley & Sons Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting-edge primer introducing readers to the major concepts in modern evolutionary genetics. This book spans the continuum of scale, from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution, and the continuum of time, from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies. Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in-depth enough to be of value to established researchers in evolution biology. worked out the collapse of large stars and supernova explosions. They went on to evolve binaries of compact stars, finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution. C-H Lee joined them in the study of black hole binaries and gamma ray bursts. They found the black holes to be the fossils of the gamma ray bursts. From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions. This invaluable book contains 23 papers on astrophysics, chiefly on compact objects, written over 23 years. The papers are accompanied by illuminating commentary. In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars, and to explain why black holes are formed at relatively low masses.

How did life evolve on Earth? The answer to this question can help us understand our past and prepare for our future. Although evolution provides credible and reliable answers, polls show that many people turn away from science, seeking other explanations with which they are more comfortable. In the book *Science, Evolution, and Creationism*, a group of experts assembled by the National Academy of Sciences and the Institute of Medicine explain the fundamental methods of science, document the overwhelming evidence in support of biological evolution, and evaluate the alternative perspectives offered by advocates of various kinds of creationism, including "intelligent design." The book explores the many fascinating inquiries

being pursued that put the science of evolution to work in preventing and treating human disease, developing new agricultural products, and fostering industrial innovations. The book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes. Mindful of school board battles and recent court decisions, *Science, Evolution, and Creationism* shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith. For educators, students, teachers, community leaders, legislators, policy makers, and parents who seek to understand

the basis of evolutionary science, this publication will be an essential resource.

Each year, the International Police Executive Symposium (IPES) holds a global conference for police scholars and practitioners to exchange information about the latest trends in police practice and research. Drawn from recent proceedings, *The Evolution of Policing: Worldwide Innovations and Insights* explores major policing initiatives and evolutions across the globe and presents practical insights on how police are

retooling their profession. With insight from both police practitioners and scholars, the book covers a range of topics, including: The trends in evolving police roles among democratic and democratizing states in pursuit of improved policing models The impact and implementation of the currently dominant philosophy of community-oriented policing Innovations occurring in police training and personnel management Police operations and issues relating to ethics, technology, investigations, and public relations Challenges to police practices, such as terrorism, decentralization, and the policing of indigenous and special population groups A survey of the evolving roles and practices in policing across the world, the book is written in a style accessible to a wide audience. The expert insight will assist scholars in seeking directions for their current research endeavors while at the same time enabling practitioners to implement new programs or fine-tune their current practices.

Evolution: Components and Mechanisms introduces the many recent discoveries and insights that have added to the discipline of organic evolution, and combines them with the key topics needed to gain a fundamental understanding of the mechanisms of evolution. Each chapter covers an important topic or factor pertinent to a modern understanding of evolutionary theory, allowing easy access to particular topics for either study or review. Many chapters are cross-referenced. Modern evolutionary theory has expanded significantly within only the past two to three decades. In recent times the definition of a gene has evolved, the definition of organic evolution itself is in need of some modification, the number of known mechanisms of evolutionary change has increased dramatically, and the emphasis placed on opportunity and contingency has increased. This book synthesizes these changes and presents many of the novel topics in evolutionary theory in an

accessible and thorough format. This book is an ideal, up-to-date resource for biologists, geneticists, evolutionary biologists, developmental biologists, and researchers in, as well as students and academics in these areas and professional scientists in many subfields of biology. Discusses many of the mechanisms responsible for evolutionary change Includes an appendix that provides a brief synopsis of these mechanisms with most discussed in greater detail in respective chapters Aids readers in their organization and understanding of the material by addressing the basic concepts and topics surrounding organic evolution Covers some topics not typically addressed, such as opportunity, contingency, symbiosis, and progress

and the History of ERM CRC Press

Governance in the Middle East is topic of interest to scholars, activists and policy makers.

The currently proposed book is intended to present the first comprehensive framework of the question of governance in the Middle East in its various forms and manifestations:

political, economic, and government performance. This study will supply the context that is missing in the existing literature on, perhaps, the last bastion of authoritarianism in

the world. Proposed Contents This book will be structured into two parts: Part I (Chapters 1-11) provides some theoretical background and analyzes the patterns and challenges of governance in the Middle East, providing some global context; Part II (12-Conclusion) will examine specific cases in selected countries and regions in the Middle East. Part I: Theory and Context Chapter 1 will be an introduction describing the main aspects of the book and highlighting the main points made by the contributors. Chapter 2 will present the theoretical dimensions of governance and review the "state of the discipline" and the latest trends in the literature on governance. The author of this chapter will be an authority in the subject of governance, but does not have to be necessarily a Middle East scholar. Chapter 3 will examine the general political trends in the

Middle East and provide a historical background: nation-state formation, colonial and postcolonial experiences in the Middle East and the nature of the Middle Eastern political environment at the present time. Chapter 4 will look into the economic aspects of governance in the Middle East and contextualize the economic challenges and deficiencies affecting the region. Chapter 5 will examine the areas of success and failure in government performance in the region and the aspects of human development. Chapter 6 will look into the role of religion in shaping the governance in the Middle East. After all, most Middle Eastern governments declare Islam as the State religion, while a few consider Islam the source of governance and legislation (e.g. Saudi Arabia and Iran). Chapter 7 will shed light on the sectarian division among Muslims (Shi ' a vs. Sunnis) and the significance of this division for the governance, particularly in countries where the ruling groups belong to a different sect than the governed, such as Bahrain, Saudi, Kuwait and Lebanon. Chapter 8 will examine relation between the state of governance in the Middle East and the progress of human rights, or lack thereof. The Middle East remains one of the most troubling regions on human rights and the respect for human dignity. All of the region ' s governments are heavily implicated in very serious violations of the most basic in human rights. Chapter 9 will focus on the status of women in the Middle East and the governmental performance in the region in relevance to women rights and status. The recent years have witnessed many positive changes in this regard, but there remains a lot of work to be done, which is going to be outlined in this chapter. Chapter 10 will look into the

role of oil and other natural sources in shaping the economic and political performance of Middle Eastern governments. Also, it will shed light on the various ways these governments distribute the revenues (rents) from these resources and how they use them, or don't, in the development of their countries or, in most cases, on the military and state oppressive machine. Chapter 11 will examine the role of international organizations and trade agreements on the performance of governments and whether or not such factors influence or shape governance in the region. It is well-known that Turkey has changed many of its laws and social policies in response to the demands of EU members and in hopes of being admitted into the EU. The chapter will elaborate on this and similar cases throughout the region. Part II: Case Studies Chapter 12 will examine the case of Iraq. The country is experiencing perhaps the most dramatic scenarios of governance in the region. This chapter will shed light on the unfolding political process and the struggle of Iraqis to forge a path toward democracy in a region determined to resist any political change within its boundaries. Key issues: Power-sharing, pluralism, federalism, ethnic and sectarian conflict, trust-building, corruption and political violence. Chapter 13 will examine the case of Iran. Thirty years after the Islamic Revolution, Iran is entering into a soul-searching phase in its history. The ongoing battle between the reformers and the hardliners is only a sign on the larger problem of governance. A majority of Iranians have no personal recollection of the problems that led to the Revolution. It is vitally important that the government changes its claims to legitimacy

from being the force that toppled the Shah to being the provider of prosperity and development of the country and its young population. Key issues: Political reform, human rights, reconciliation with the West, allocation of resources and services. Chapter 14 will examine the case of Egypt. The country is facing an unknown future with President Mubarak reaching advanced age. The debate over his succession is dividing the country in a dramatic way. Egypt is also a country with depleted infrastructure and an ever-shrinking middle class. If the country falls into a violent cycle after the looming departure of Mubarak, the entire region could fall into the abyss. Key issues: Succession of Mubarak, economic performance, services, religious extremism (Muslim Brotherhood) and Nationalism. Chapter 15 will examine the case of Israel.

While politically different from its neighbors, Israel is sinking fast into the same problems that plague the Middle East. The country suffers political corruption and many leadership crises. The government is trying to redefine the identity of the state, which is going to create a showdown with the fast-growing non-Jewish Israeli population, and there is the problem of the government's inability to conclude peace with Israel's neighbors. Key issues: corruption, violence and security. Chapter 16 will examine the case of Saudi Arabia. The country is perhaps the most authoritarian regime in the world. The lack of individual liberties and abuses of human rights are the main problems. The government's treatment of its Shia subjects (approx. 12% of the population) as second-class residents is extremely troubling. The country does not have a meaningful public

participation and the Royals who run the government have no accountability to anyone. Key issues: human rights, religious freedom, political reform, public participation. Chapter 17 will examine the case of Bahrain. This small country in the Persian Gulf is facing many challenges. Like Iraq before 2003, it is a country with a clear Shia majority ruled by a small Sunni minority. The Shia are excluded from the government (they were allowed to run for the parliament in the last election for the first time), the military and many other important arenas. The government uses the naturalization of Sunnis as a political tool to change the demographic balance in the country. Key issues: political reform, popular participation, naturalization, human rights. Chapter 18 will examine the case of Yemen. The current struggle over government performance and

fairness toward the South has given rise to the calls for separation of the two parts of Yemen. Also, there is the issue of religious freedom, which cases the ongoing war with the Houthis faction that accuses the government of making alliance with the Saudi government and the Sunni extremists in the country to form an existential threat to Shi ' ism. Yemen is also a country with many ungoverned spaces and the governance in the "governed" areas is abysmal. Key issues: political violence, human and religious rights, terrorism, tribalism and poverty. Chapter 19 will examine the case of Turkey and its impressive rise as a model for a strong Muslim nation which tries to reconcile Islam and democracy. Turkey ' s longstanding problems with social rights, especially of its 12 million Kurds, have always been a formidable challenge to the image of the nation. However,

the country ' s bid to join the EU has forced many changes that inadvertently helped the government ' s international standing. Chapter 20 will examine the case of Syria and the influence of the Arab nationalist ideology on keeping the country as one of the most oppressive regimes in the region. Also examined will be the affect of Syrian-Israeli conflict on the country ' s governance. Chapter 21 examines the case of Lebanon. This country which witnessed more governance challenges than any other in the region makes a very interesting case study. The country ' s sectarian politics and the client-patron relations and loyalties among the various Muslim and Christian elements of society have undermined the country ' s potential to become a fully democratic state. Chapter 22 will focus on the case of Sudan. This country has been in the center of world

attention because of the internal conflict and the accusations of serious violations of human rights and the rise of separatist movements that receive much foreign sympathy and support. The country has missed many opportunities to attain social and political reconciliation, but it should not be considered a lost cause. There is a lot of potential in the country, especially when we consider the vibrant politics of government and opposition. Chapter 23 will examine the case of Jordan and the role of the uniqueness of the regime in creating relative social and political stability. Unlike the most of the governments in the region, the Jordanian Monarchy keeps the government as a convenient buffer between the Royals and the people. When popular sentiments turn very negative, the King, acting as the good cop, dismisses the government and orders the

formation of a new one. Also, Jordan has achieved some good success in absorbing the Islamist groups into the political system, but not without challenges. The chapter will also focus on the Palestinian factor – Palestinians make more than half of the Jordanian population. Chapters 24, 25 & 26 will examine the Maghreb states (Morocco, Algeria and Tunisia). These states face many challenges in their governance: separatism, terrorism and the government oppressive history in Morocco; the Islamism challenge, internal war in the tribal areas and ethnic conflict in Algeria; and the stifling of personal freedom and liberties in Tunisia in the name of secularism and the war on extremism are all challenges that need to be highlighted in a chapter about each country. Chapter 27 will focus on governance in Libya. Having ruled the country for forty-seven years,

the Libyan president is the dean of Middle Eastern dictators. He has taken his country through all kinds of political adventures. The rule through popular committees is a unique system that gives Col. Mu ‘ ammar Qadhafi the opportunity to oppress through popular participation and acquiescence. Chapter 28 will focus on the governance in the United Arab Emirates. This confederation of seven emirates has witnessed some excellent success in the economic and infrastructural development, especially in Dubai, which competes with the richest cities in the world, thanks to the energy and vision of its Emir, Muhammad b. Rashid. While it is generally considered much better than its fellow Gulf States, the UAE has its own challenges, especially in light of the absence of unified system of governance, because each emirate has the autonomy to shape its internal

affairs. Chapter 29 will examine the governance and, in certain cases, lack thereof in the countries that form the Horn of Africa, i.e. Somalia, Eritrea and Djibouti. These countries face some tremendous challenges in the areas of refugees, resources, stability and ethnic & conflict. The failure of these states, as seen in the case of Somalia, can make the problems of security in the whole region much worse than it is now. Famine and anarchy have already led to wars, piracy and the flood of refugees, not to say much about the humanitarian catastrophes in the region. This chapter will highlight the problems of governance in these often forgotten countries. Chapter 30 will be a conclusion and final remarks on the general framework of the regional governance and the way forward. This book is aimed at a wide variety of audience. Policy makers, policy analysts, as well as journalists will benefit from the history and analysis that will be presented in the book. Also, academics will find in the book important materials for research and class work. Professors teaching courses on US Foreign policy, Middle East, International Relations, Comparative Politics and many related fields will find the book a very suitable choice for their students to read. Given the media and general public 's interest in the Middle East and the Middle East, the book will also appeal to a wide range of educated readers in the United States, the United Kingdom and many other countries world-wide.
